DESIGNED
FOR ENGINEERING

elesa+GANTER

DESIGNED
FOR ENGINEERING

TWO COMPANIES
ONE WORLD OF STANDARD PARTS

ELESA+GANTER is a worldwide sales joint-venture set-up to offer the widest product range of standard machine elements for the mechanical industry. Highly reliable products ensuring perfect functionality with a unique design represents the ELESA+GANTER distinctive quality code.

ABOUT ELESA+GANTER

ELESA+GANTER is the worldwide sales joint-venture between Elesa S.p.A. (Italy) and Otto Ganter GmbH & Co. KG (Germany). In 1995, after more than 20 years of successful cooperation, the two companies started setting up a combined product range and a common sales network under the trademark ELESA+GANTER.

The combination of ELESA know-how in design and manufacturing of engineering plastics with GANTER expertise and precision in metal parts makes ELESA+GANTER a unique range.

Customers soon started appreciating it from all over the world. Subsidiaries were established initially in Austria, Spain, Poland and then in China, Czech Republic, India and Turkey.

ELESA+GANTER subsidiaries offer a pool of specialised engineers, constantly in contact with R&D departments at both the parent companies in Italy and Germany, to develop special executions or new technical solutions meeting customers' specific requirements.

Stock availability on site ensures local customers receive standard elements with reduced delivery times whilst providing timely and reliable answers.

Over 60.000 product codes distributed in more than 70 industrialised countries with local presence and the highest technical consultancy.

DESIGNED FOR ENGINEERING

Designing and manufacturing technical solutions for the mechanical industry represent the achievement and the commitment of Elesa and Ganter.

A guarantee for leading-edge benefits for the customers.

DESIGNED
FOR ENGINEERING

POINTS OF STRENGTH

- Technological background from two established parent companies
- Innovation in combination with decades of experience
- Unique design
- Optimised and widest product range of standard machine elements, driven by the market
- Worldwide distribution network
- Full stock availability with fast delivery times
- Customised solutions
- Perfect service including technical assistance

QUALITY AND DESIGN

To always offer unique and recognizable products anywhere in the world: a commitment since 1977.
ELESA+GANTER product range contributes to improve the quality of the machines and equipment they are destined for. Constant research on ergonomics, production materials and functionality results in a range characterised by a quality that can be appreciated by hand, and a unique design as proven by **45 industrial design awards** by the most prestigious **international juries**.

ABOUT ELESA

Established in 1941 in Italy, ELESA has earned the status as a reference point for designers and machine builders.
An excellent combination of technology and design has given rise to a diverse production thanks to the constant commitment to follow developments in engineering plastics and their processing technology.

A corporate culture strongly committed to product quality combined with an innate sensitivity for design and ergonomic research has led to the creation of products unique and recognisable worldwide as ELESA products. An authentical "Made in Italy" which has become popular around the world and particularly appreciated by the most qualified machine manufacturers.

Since the 50's, ELESA has been actively involved in the cultural revision of machine tool aesthetics, that was taking shape around that time, by innovating the design of accessories and components for the mechanical industry, machinery and industrial equipment.

An ongoing commitment to which ELESA has always been loyal over the decades, as proven by the 39 industrial design awards from the most prestigious juries, received in the last 40 years and the 180 patents and registered designs. ELESA continues to invest in R & D and in particular in the innovation of its production technologies aiming to creating new products or to further improve performances and reliability of the existing ones.

Tens of millions of pieces are produced every year at the parent company in Monza using the latest automated production technologies.

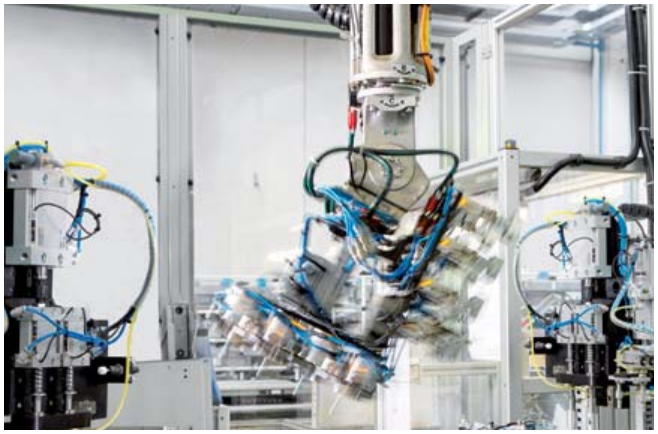
A keen dedication to product quality combined with Italian design represent in brief ELESA company culture.

Environmentally Conscious Manufacturing

Production facilities in Monza

Logistic centre

R&D Department - Test Laboratory



Automatic production unit

Italian Association of Machine Tool Manufacturers

Italian Packaging Machinery Manufacturers Association

ITALIAN INSTITUTE OF UNIFICATION

All standard products in the ELESA range are subject to mechanical, physical, chemical and durability testing in order to provide correct and reliable technical data.
Most of the tests are carried out in the ELESA laboratory, a modern facility equipped with the most advanced testing instruments which is also at the disposal of customers for carrying out tests that simulate specific or particularly heavy conditions of use.

THE GERMAN PARENT COMPANY

GANTER's well proven expertise with more than 120 years of market-leadership in standard parts for every sector of the industry speaks for itself.

Otto Ganter GmbH & Co. KG Headquarters in Furtwangen (Germany)

Ganter Logistic Center

Production plant in Rheinhausen

Otto Ganter published the first catalogue for standard parts in 1912.

ABOUT GANTER

Established in 1894 as a mechanical workshop, Ganter released the first catalogue for standard parts as early as 1912 – five years before the foundation of the Deutsche Industrie Norm (DIN). The idea of standardizing industrial products, manufacturing them in economical lot sizes, storing and selling them individually was entirely new at that time. Right to this day, this principle has been the foundation of our actions which, thanks to broad availability and the latest in production engineering, guarantee ultimate benefits for the customer.

LEADING WORLDWIDE

Ganter is at the leading edge in the development, production and marketing of standard parts for the entire industry. Quality and volume of production selection set the standards across all industries. Ganter's standard parts are offered worldwide through an efficient sales network. Quality, advice and availability are thus guaranteed – wherever you are located.

GANTER customers appreciate and benefit from a strong service orientation for special requests, automated warehouses with everything on stock and a quick service. German accuracy is found in each standard and customized part at every branch location.

Automated Warehouse

Test laboratory

Production unit

SERVICE INCLUSIVE

Ganter's unique range of standard parts has the appropriate product for virtually every possible application – or if not, help is at hand for customized solutions. One thing is certain, though: Standard parts from Ganter come from a single source and offer the best possible support to the design and procurement process.

Quality/Environmental Management ISO 9001 ISO 14001 www.dekra-ed.com DEKRA certified

QUICK AND DIRECT

Thanks to an efficient logistics approach, Ganter is capable of delivering standard parts in the shortest possible time – anywhere in the world.

WORLDWIDE SALES NETWORK

Elesa+Ganter distribution network reaches more than 70 different countries worldwide. Thanks to the close relationship with the headquarters, ELESA+GANTER subsidiaries and distributors are able to provide customers with the highest technical support.

HIGH PERFORMING ITEMS

Standard components with innovative features, ergonomic design in compliance with strict directives to meet specific needs and applications.

STAINLESS STEEL CORROSION RESISTANCE

Due to its high corrosion resistance, stainless steel is one of the most sought-after materials in many sectors of the mechanical industry.
ELESA+GANTER product range includes a wide assortment of special AISI stainless steel products throughout all product groups. It covers both stainless steel standard elements as well as technopolymer standard elements with stainless steel metal inserts.

Designed for: food-processing, chemical and pharmaceutical industries, difficult environmental conditions and for all applications where provisions of law make it mandatory to use corrosion resistant materials.

WHITE FOR DIRT-PROOF SURFACES

RAL 9002 white colour is particularly suitable in medical enviroments, as it allows the prompt identification of any dust or dirt traces, making cleaning operations easier. From a psychological point of view, it also gives the operators and the patients a sense of sterility and maximum cleanliness.
Compact shapes and lack of cavities allow avoiding any deposit of dirt, dust and machining residues.
ELESA+GANTER product range includes an assortment of handles and clamping knobs in white technopolymer, also with stainless steel inserts.

Designed for: medical and hospital equipment.

SANITATION AGAINST BACTERIAL INFECTION

SAN LINE products avoid reproduction of any undesired organisms such as microbes, bacteria, mildew and fungi which can cause unpleasant odours, discoloration, degradation and formation of biofilm on surfaces.
Handles and knobs containing antimicrobial additives (mixture of silver ions on an inorganic ceramic base without chemicals, antibiotics or pesticides) or coated with a special finishing material to offer an adequate protection.

Designed for: disability aids, medical and hospital equipment.

COMFORTABLE AND SAFE GRIP

SOFT-TOUCH product line features a soft and slip-proof surface to ensure a safer and more stable ergonomic grip even under unfavourable conditions of use such as in the presence of moisture and grease.
Moreover, SOFT-TOUCH allows a better force transfer between hand and operating elements and ensures the absorption of vibrations during operations.

Designed for: disability aids, high-precision instruments, fitness machines, gardening and unfavourable climatic conditions.

CONDUCTIVE TECHNOPOLYMER

ESD line products are suitable in EPA environments (ESD Protected Areas) where components are susceptible to electrostatic discharges and have to be handled with the minimum risk of damage. The special conductive technopolymer (ESD-C Electrostatic Discharge Conductive) prevents the accumulation of electrostatic charge between bodies with different electric potential.
The special mark ESD-C is laser-engraved indelibly on each element according to EN 100015/1 and IEC 61340-5-1.

Designed for: assembly lines for electronical components, ESD-Protected Area (EPA).

COMPLIANT WITH ATEX EUROPEAN DIRECTIVE

Components complying with health and safety requirements according to 94/9/EC ATEX European directive (explosive atmospheres) for equipment in Group II, category 2GD.
ELESA+GANTER extensive range of oil level sight glasses and plugs provides solutions for highly demanding requirements, such as high temperatures, high pressure loads or aggressive substances.

Designed for: equipment and machines, such as hydraulic components and gears, for use in environments subject to explosion risk.

SELF-EXTINGUISHING TECHNOPOLYMER

Standard elements for applications in public environments where there is risk of fire, such as in the lighting sector.
ELESA+GANTER elements made in self-extinguishing special technopolymer certified “V0” in accordance with UL-94 V (Underwriters Laboratories). This classification is used to describe the reaction of plastics to flames. Laboratory tests proved that under vertical burning each individual sample requires less than 10 seconds to exhinguish flames.

Designed for: entertainment equipment, urban and public fittings.

STANDARD MACHINE ELEMENTS FOR PROFILE SYSTEMS

Standard elements in this product line are compatible with the most common aluminium profile systems. Using matching assembly sets, the ELESA+GANTER standard elements are easily and cost-effectively connected with the profiles without time-consuming compiling of individual parts in the order.

- Compatible with the common profile systems
- For groove widths of 6, 8 and 10 mm
- For profiles 30, 40 and 45 mm

Designed for: assembly on common profile systems for various different sectors.

STAINLESS STEEL PRODUCTS

Standard parts made of rustproof stainless steel have been designed for use in the food sector, in the chemical industry, for aggressive ambient conditions or for outdoor use.

INOX STAINLESS STEEL

STAINLESS STEEL PRODUCT LINE

Standard parts made of rust-proof Stainless Steel grades- designed for use in the food industry, the chemical industry or in general for use in aggressive atmospheres or outdoors. Normally made with galvanic surface treatment, standard parts in the Stainless Steel product family are not only corrosion-resistant, but also precisely fitting and environmentally friendly.

- Excellent corrosion resistance
- Durable
- Robust

ERGONOMICS AND DESIGN

Good design and ergonomics should start with a thorough understanding of the product's functions and the interaction between man and machine, taking into account the full set of movements involved in each operation.

FIVE POINTS
a discrete trademark that distinguishes all ERGOSTYLE® products

elecolors®

ERGOSTYLE® by ELESA

ERGOSTYLE® PRODUCT LINE

ERGOSTYLE® products combine perfectly with the machines and equipment they are destined for, contributing to enhance their value and quality.

ERGOSTYLE® was conceived at the beginning of the '90s, for a series of new markets such as hospital, medical, sports and leisure equipment, scientific instrumentation and office furniture requiring, in addition to pure functionality, a particular care in ergonomics and design.
Nowadays, ERGOSTYLE® is accepted and requested by a growing number of traditional industrial sectors where machines and equipment have undergone, over the last few decades, a profound aesthetic and design renovation.

- Perfect functionality
- Modern lines and ergonomic shapes
- Inserts in six standard ELECOLORS®

ERGOSTYLE® obtained several of the world's most distinguished recognitions in Industrial Design

reddot award 2015 winner

HYGIENIC DESIGN

In the food industry, medical technology and the pharmaceutical industry, product safety and consumer protection are becoming increasingly important.

Due to their specific properties, standard parts in Hygienic Design can assist the production process in these sensitive areas and facilitate the manufacture of products with a long shelf life, which are free from preservatives.

HD

HYGIENIC DESIGN PRODUCT LINE

Standard parts of the Hygienic Design product family are labeled with the HD icon. They combine high surface quality, freedom from dead spaces, non-scooped outer surfaces, and sealed bolting areas. A sealing concept based on FEM calculations ensures reliable contact pressure after installation.
Hygienic Design also means that the time and material needed for regular cleaning is significantly reduced – which also noticeably lowers operating costs.

Less and shorter cleaning work (this can be up to 25% of the production time), therefore

- More time available for production
- Less fresh water consumption
- Lower energy consumption
- Less cleaning agent required
- Less production of waste water
- Lower total costs and saving of resources

SUPER-TECHNOPOLYMER

Technopolymer with high mechanical and thermal performances.
The latest evolution in engineering polymer materials for the industrial sector.

SUPER TECHNO POLYMER

SUPER-TECHNOPOLYMER PRODUCT LINE

The most technologically advanced industries, such as automotive, aerospace and electronics, have long ago understood the many benefits arising from the use of engineering plastics.

- High mechanical performance
- Corrosion resistance
- Lightness
- Non magnetic
- Low coefficient of friction
- Maintenance free
- Thermal insulation

This evolution goes beyond the simple use of high performance engineering plastics as an alternative to metal. In fact, to manufacture technopolymer products suitable for applications which generally required metal products, the design phase needs to be performed with great expertise by optimising shapes and thickness, to benefit from all the typical characteristics of polymeric materials.

The range presents several components made of SUPER-Technopolymer able to combine favourably the advantages of engineering plastics with those of metal.

CUSTOMISED SOLUTIONS

ELESA's and GANTER's modern and automated production facilities, together with their know-how in design and manufacture are at the disposal of all customers for the development of new technical solutions and customised production.

FULL TECHNICAL AND MANUFACTURING COMPETENCE

In addition to the wide range of standard machine elements, the strong customer orientation and production flexibility of the two parent companies allow for the offering of customised technical solutions meeting specific requirements.
Both Technical Departments are able to provide a cost-effective solution by modifying an existing ELESA+GANTER standard part or by going all the way back to the drawing board.

- Special shapes, dimensions, threads.
- Special colours
  non standard colour options.
- Special surface treatments
  plastic powder coating, zinc, nickel and chrome plating, anodising.
- Special product branding
  logos and texts by tampoprinting, laser-engraving and moulding.

Pictorial Index

Guide to reading the symbols

High performing items

Self-extinguish technopolymer	Technopolymer for high temperatures	Antistatic special technopolymer
Chrome-plated technopolymer	Antimicrobial technopolymer	SUPER-Technopolymer
Products complying with 94/9/EC ATEX European Directive (explosive atmospheres)	Products with metallic inserts or completely made out of stainless steel	For several machining cycles and heavy duties
Technopolymer with "Soft-touch" elastomer coating	RAL 9002 white technopolymer	Compatible for assembly on profile systems
Hygienic Design		

Symbols of technical features

PP Polypropylene based technopolymer	PF Phenolic based Duroplast	PC Polycarbonate	HF Ferrite
PA Polyamide based technopolymer	PF PAINTED Phenolic based Duroplast with epoxy resin coating	FKM Fluorine rubber	ND Neodymium iron boron
PA-T Transparent polyamide based technopolymer	TPE Thermoplastic elastomer	NBR Nitrilic synthetic rubber	SC Samarium cobalt
PA-T AR "Alcohol Resistant"	POM Acetal resin based technopolymer		AN Aluminium nickel cobalt

IP40 IP54 IP65 IP67

International Protection

Products which are in compliance with the EN 60529 directive: protection degree of the cases of electric and electronic devices against intrusion of solid or liquid foreign bodies.

RoHS compliance

It concerns the series for which the production after 31/05/2011 is in compliance with the European Directive 2002/95/CE (Restiction of Hazardous Substances).

Temperature

+100° -20°

Symbol of minimum and maximum operating temperature.

For further information concerning the symbols shown on this page see the introduction (pages 10 - 15) and the Technical Data in the catalogue appendix (pages A1 - A53).

Technopolymer

ELESA Original design

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

BOSS-CAP
Anodised aluminium self-adhesive front plate.
VRTP. 375: cover in polyester based technopolymer (PBT), RAL 7035 grey colour, glossy finish, press-fit assembly.

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole.
- **VRTP.:** without handle.
- **VRTP+I:** with revolving handle I.621+x (see page 576) in technopolymer.
- **VRTP+IEL:** with revolving handle IEL+x-SOFT (see page 572) in technopolymer coated with "Soft touch" thermoplastic elastomer (TPE).
- **VRTP+IR:** with fold-away handle IR.620 (see page 584) in technopolymer.

SPECIAL EXECUTIONS ON REQUEST
Bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).
To order the handwheel with keyway add the index -K after the code and the description (i.e. 78411-R-K VRTP.80 A-8-K).

ACCESSORIES ON REQUEST
- Axial retaining washer GN 184 (see page 971).
- Technopolymer boss cap in one of the Ergostyle colours, matte finish, available for VRTP.125, VRTP.160 and VRTP.200 (see ECB table).

Code	Description	Boss cap for
29552-*	ECB.T2-*	VRTP.125
29553-*	ECB.T3-*	VRTP.160
29554-*	ECB.T4-*	VRTP.200

* Complete with colour index (C1, ..., C6).

VRTP-P-SST

INOX STAINLESS STEEL | RoHS | PP-FDA | PA-FDA | +80° 0°

Spoked handwheels with solid section

Technopolymer

ELESA Original design

MATERIAL

High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.
Certified in compliance with FDA (U.S. Food and Drug Administration).

BOSS-CAP

AISI 304 stainless steel self-adhesive front plate (adhesive certified in compliance with FDA U.S. Food and Drug Administration).

STANDARD EXECUTIONS

AISI 304 stainless steel boss, H7 reamed hole.
- **VRTP-P+I-SST**: with revolving handle type I.621+x-SST in polyamide based (PA) technopolymer, certified in compliance with FDA.
- **VRTP-P+IR-SST**: with fold-away handle type IR.620 in polyamide based (PA) technopolymer, certified in compliance with FDA. AISI 304 stainless steel pin, bushing and internal components, AISI 316L stainless steel support.

SPECIAL EXECUTIONS ON REQUEST

- Bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).

To order the handwheel with keyway add the index -K after the code and the description (i.e. 79111-K VRTP.80-P+I-SST-8-K).

ACCESSORIES ON REQUEST

Axial retaining washer GN 184.5 (see page 971).

FEATURES AND APPLICATIONS

The solid rim of the handwheel allows the maximum cleaning thanks to the absence of rear recesses. For this reason, being the technopolymer polypropylene based and the metal components in AISI 304 stainless steel, this version of VRTP. handwheel is designed for applications in food, pharmaceutical and medical fields.

- Version **K**: with keyway

Aluminium pressure die casting

- Hub machined
- Rim turned
- plastic coated

black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Rim concentric and square to bore < 0.4

Cylindrical Revolving handles GN 798.2 (see page 578)
Plastic, Technopolymer
black, matt

INFORMATION

Spoked handwheels GN 924 are distinguished by modern design. The removable plastic cover shrouds the fixing components such as screws, countersunk washers as well as the shaft end.

ACCESSORY

- Countersunk washers GN 184 (see page 971) are to be ordered separately

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Handwheels with retractable handle

Aluminium, Handle locked

reddot design award

SPECIFICATION

Type
- Type **R**: with retractable handle

Bore codes
- Version **B**: without keyway
- Version **K**: with keyway

Aluminium pressure die casting
- Hub machined
- Rim turned
- plastic coated

black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Rim concentric and square to bore < 0.4

Retractable handles GN 798.3 (see page 586)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

The handle in these handwheels is locked in a conical bore in the operating position.
For reversal, it must first be pulled from the cone in axial direction.
A pressure spring holds the handle in both positions. When swung out, it automatically engages again.

TECHNICAL INFORMATION

- Keyway DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Handwheels with retractable handle

Aluminium, Handle swivelling

reddot design award

SPECIFICATION

Type
- Type **R**: with retractable handle

Bore codes
- Version **B**: without keyway
- Version **K**: with keyway

Aluminium pressure die casting
- Hub machined
- Rim turned
- plastic coated

black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Rim concentric and square to bore < 0.4

Safety retractable handles GN 798.7 (see page 587)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

Retractable handwheels GN 924.7 are distinguished by modern design.
These spoked handwheels are suitable for applications where the handle must not remain in the operating position.
In order to bring the handle into this position it has to be turned first through 90° to a stop against a torsion spring and then it is pushed against spring pressure into its hold position. By maintaining the forward thrust on the handle the handwheel can easily be rotated.
When releasing the handle the springs returns it back to the retracted position.

Handwheels with rectractable handle

Aluminium, Handle locked

SPECIFICATION

Type

- Type **R**: with retractable handle

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway

Aluminium

- Hub machined
- Rim turned and polished
- Unmachined body matt shot-blasted

Rim concentric and square to bore < 0.4

Retractable handles GN 798.3 (see page 586)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

The handle in the handwheels GN 322.3 is locked in a conical bore in the operating position.
For reversal, it must first be pulled from the cone in axial direction. A pressure spring holds the handle in both positions. When swung out, it automatically engages again.

TECHNICAL INFORMATION

Safety handwheels

Instruction - Application guide

The relevant health and safety at work provisions state that handwheels must be attached to spindles such that they are not turned along together with the machine drive assembly. Safety handwheels meet this requirement:

- If not in operation, the wheel is disengaged. Shifting it in axial direction (pushing or pulling) will intermesh two serrated bushings, formlocking the wheel with the shaft.
- After releasing, the wheel will disengage again automatically.

A number of user notices for various design types are listed below. These notices are non-binding and given without liability. They do not constitute a warranty of proper function. The user must in any case determine whether the safety handwheels are suitable for the intended purpose and use.

1. Safety handwheels with coupling attachment GN 000.4 (friction bearing)

All coupling elements are housed in an enclosed component known as coupling attachment. It is designed such that it can be installed in all current types of handwheels and also in other machine elements.

Optionally, the same coupling attachment can be mounted in the handwheel such that the axial movement for dis-engagement is either “pulling” or “pushing” for disengaging. The “pushing” version is safer in terms of health and safety at work because the risk of inadvertent engagement is lower.

Type A (without handle)

As there is no unbalance (handle), this handwheel will also turn along with the drive, but it can be stopped by hand.

With the wheel moving along, the bearing is not put under excessive strain, with the effect that this type is particularly suitable for continuous operation. At higher speeds, the unbalanced handwheel may cause vibrations, however. Also, the friction heat which develops when braking the wheel must be kept in mind.

Type D (with handle)

The handle (unbalance) causes the disengaged handwheel to stop while the shaft is turning. Owing to the type of construction and bearing design of these couplings, the use of these handwheels is usually limited to relatively slow-turning spindle speeds or spindle speeds running at higher speed for short periods. A high risk of dirt deposits (grinding dust) and dry-running can limit the user options even further.

If the handwheel and its handle are deliberately or inadvertently set in (concurrent) motion while the shaft is turning, bearing friction may cause the wheel to turn permanently. At higher speeds, this may cause vibrations and, considering the rotating mass of the handle, can result in injuries also if disengaged. This risk / operating status must therefore be avoided at all cost.

Coupling attachments GN 000.4 (see page 184)
Safety handwheels GN 321.4 (see page 178)

2. Safety handwheels with coupling attachment GN 000.5 (needle bearing)

The details given under 1. above apply in principle also to these safety handwheels.

With their needle bearings, they have the advantage over friction bearings that they can be used for somewhat higher speeds due to their substantially lower friction, lower wear and tear and lower sensitivity to lubrication.

Owing to their larger construction length and lower friction (hardened contact surfaces) and finer intermeshing, these wheels are also easier to engage.

Coupling attachments GN 000.5 (see page 185)
Safety handwheels GN 321.5 (see page 179) and VDN.FP+I+ST (see page 166)

3. Safety handwheels with hub cap GN 321.6

These handwheels are an advance development of the safety handwheels with coupling attachment GN 000.5 (needle bearing).

The coupling elements have been specially developed for this type of handwheel and are therefore not intended for general use. Also, they are only intended for the “pulling” mode of engagement.

The user notices listed under 1. and/or 2. above also apply here. Owing to their type of construction, especially the cap, these handwheels are largely protected from dirt.

Safety handwheels GN 321.6 (see page 180)

4. Safety handwheels with fixed bearing flange GN 327

The safety handwheels described under 1. to 3. above are characterised by the fact that they require no special machine-side measures for attaching. They are simply pushed over the shaft. However, the inevitable bearing friction generates a link between shaft and handwheel which needs to be kept in mind as specified above.

For applications with very high rotary speed, ultimate levels of safety at work and under continuous operation, the safety handwheel with fixed bearing flange is the best possible solution. The separate bearing configuration means that the user notices given for types 1. to 3. do not apply.

However, this safety handwheel is more complex, with a number of requirements to be met at the machine side.

Safety handwheels GN 327 (see page 182)

Handwheels with retractable handle

Aluminium, Handle swivelling

SPECIFICATION

Type
- Type **R**: with retractable handle

Bore codes
- Version **B**: without keyway
- Version **K**: with keyway

Aluminium
- Hub machined
- Rim turned and polished
- Unmachined body matt shot-blasted

Rim concentric and square to bore < 0.4

Safety retractable handles GN 798.7 (see page 587)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

Spoked handwheels GN 322.7 are suitable for applications where the handle must not remain in the operating position. In order to bring the handle into this position it has to be turned first through 90° to a stop against a torsion spring and then it is pushed against spring pressure into its hold position.
By maintaining the forward thrust on the handle the handwheel can easily be rotated. When releasing the handle the springs returns it back to the retracted position.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Weight type B

Spoked handwheels

Duroplast, not drilled hub

MATERIAL
High-strength, reinforced phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTIONS
Black-oxide steel hub, uncovered front end, not drilled. See table for maximum permissible boring diameter d' and d''.
- **VR.FP:** without handle.
- **VR.FP+I:** with revolving handle I.301+x (see page 574) in Duroplast.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).

Spoked handwheels

Cast iron / Aluminium

SPECIFICATION

Types

- Type **A**: without handle
- Type **F**: with fixed handle
- Type **D**: with revolving handle

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway
- Version **V**: with square

Cast iron **GG**

- Hub machined
- Rim turned and polished

Aluminium **AL**

- Hub machined
- Rim turned and polished
- unmachined body shot-blasted

Rim concentric and square to bore < 0.4

Fixed handles DIN 39 (see page 565)
Revolving handles DIN 98 (see page 579)
Steel, zinc plated respectively
Plastic, Technopolymer black

INFORMATION

Handwheels DIN 950 in cast iron are supplied with handles made of zinc plated steel. In aluminum they are supplied with handles made of plastic (Type D) and made of zinc plated steel (Type F).
The official standard sheet only provides for types A (without handle) and G (without handle, but with thread d_4), also without the handwheel diameter $d_1 = 180$.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Square DIN 79 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

GN 950.1

Spoked handwheels

with large hub

SPECIFICATION

Types

- Type **A**: without handle
- Type **D**: with revolving handle

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway

Cast iron **GG**

- Hub machined
- Rim turned and polished

Rim concentric and square to bore < 0.4

Revolving handles DIN 98 (see page 579)
Steel, zinc plated

INFORMATION

Handwheels GN 950.1 differ from normal handwheels DIN 950 (see page 140) only by the larger hub.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO- Fundamental Tolerances (see page A21)

Stainless Steel-Handwheels

SPECIFICATION

Types

- Type **A**: without handle
- Type **D**: with revolving handle

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway

Stainless Steel precision casting

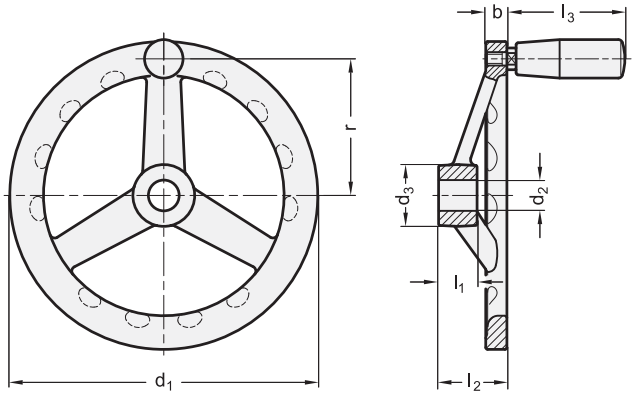
- AISI CF-8
- Hub machined
- Rim turned
- matt shot-blasted

Revolving handles

- Plastic Duroplast, black, shiny finish
- Spindle Stainless Steel AISI 304

INFORMATION

The design of Stainless Steel-Handwheels GN 949 complies with the requirements of hygiene standards.
The revolving handles are made of Duroplast which, in general, provides good resistance to the impact of chemical agents.



*Complete with Bore codes of the Handwheels (B or K)

RoHS

Pressed steel handwheels

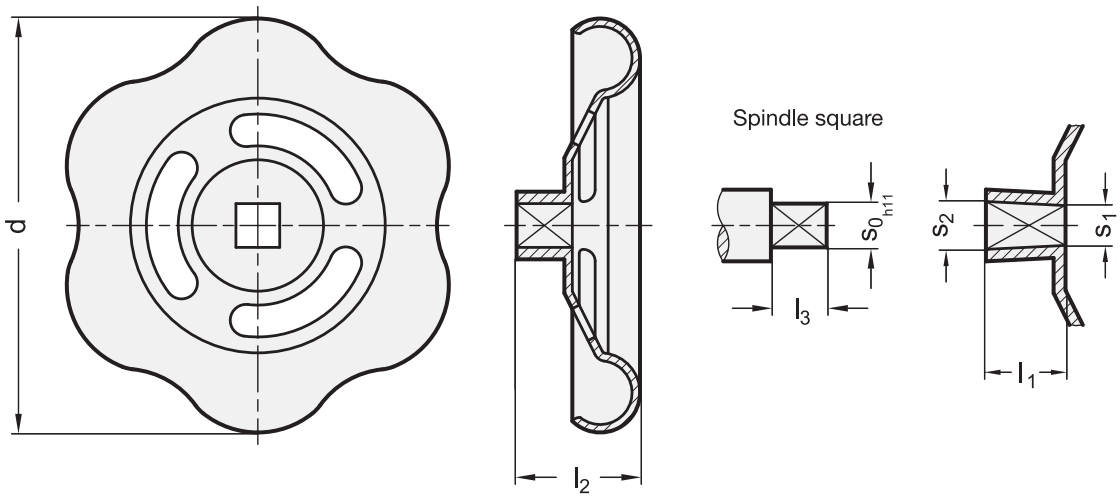
for valves

SPECIFICATION

Pressed steel
plastic coated
black, RAL 9005 **SW**
red, RAL 3000 **RT**
uncoated **RH**

INFORMATION

Pressed steel handwheels GN 227 have been specially developed for valves and they offer definite advantages:
They consist of a single unwelded piece of pressed sheet metal manufactured by a special process to give a reinforced hub. They offer high mechanical strength and are not affected by shocks and knocks.
They are resistant to temperature and fire and not weakened by any ageing process.
The slightly tapered square hole allows easy installation and firm seating on a spindle.



* Complete with colour index of the Handwheels (SW, RT or RH)

Monospoke handwheels

Technopolymer

MATERIAL
Glass-fibre reinforced polypropylene based (PP) technopolymer black colour, matte finish.

BOSS CAP
Polyester based technopolymer (PBT) in Ergostyle colours, glossy finish, press-fit mounting.
Available also as accessory sold separately (see table ECB.).

Code	Description	Boss cap for
29451-*	ECB.I3-*	EMW.350

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole.
- **EMW+IEL:** with revolving handle IEL+x-SOFT (see page 572) in technopolymer coated with "Soft touch" thermoplastic elastomer (TPE).
- **EMW+IR:** with fold-away handle IR.620 (see page 584) in technopolymer.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).

SPECIAL EXECUTIONS ON REQUEST
Bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).
To order the handwheel with keyway complete code and description with the index -K (i.e. 204611-K- EMW.350+IEL A-20-K).
For sufficient quantities: executions with locking device (Elesa patent) (see page 155).

For maximum torque (C) and impact strength (L) see Technical Data on page A3.

Three-arm handwheels

Technopolymer

MATERIAL
Glass-fibre reinforced polypropylene based (PP) technopolymer, black colour, matte finish.

BOSS CAP
Polyester based technopolymer (PBT) in Ergostyle colours, glossy finish, press-fit mounting.
Available also as accessory sold separately (see table ECB.).

Code	Description	Boss cap for
29451-*	ECB.I3-*	EYK.275/400

* Complete with colour index (C1, ..., C6).

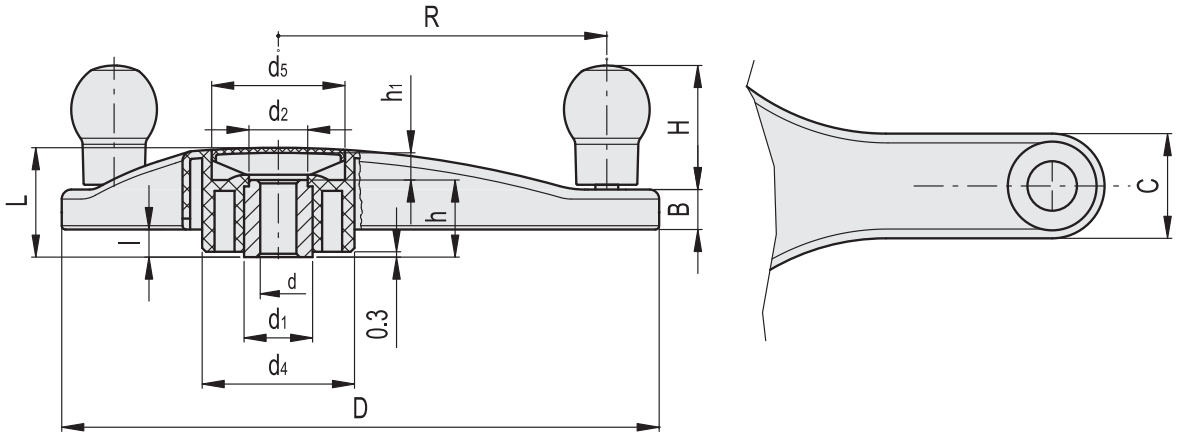
STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole.
Revolving handle EBS+x (see page 570) in technopolymer, not removable.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).

SPECIAL EXECUTION ON REQUEST
Black-oxide steel bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).
To order the handwheel with keyway add the index -K after the code and the description (i.e. 208311-K- EYK.400+I A-20-K-).
For sufficient quantities: executions with locking device (Elesa patent) (see page 155).
ETK. steering handwheel can be customised with marks, logo or special graphics (tampoprinting). The handwheels or handles can be supplied also in special coloured technopolymer.

ERGOSTYLE®

ERGONOMY AND DESIGN
The three equidistant arms (120°) offer a perfect grip and the greatest operational easiness, also to disable people. The rounded lines, the special compact and ergonomic shape of EYK. handwheel design together with the absence of cavities offer an excellent level of safety for hands during the steering operations.



*Complete with colour index, example: 208111-C2 EYK.275+I A-20-C2

For maximum applicable torque (C) and impact strength (L) see Technical Data on page A3.

Three-arm handwheel

Technopolymer

MATERIAL
Glass-fibre reinforced polypropylene based (PP) technopolymer, black colour, matte finish.

BOSS CAP
Polyester based technopolymer (PBT) in Ergostyle colours, glossy finish, press-fit mounting.
Available also as accessory sold separately (see table ECB.).

Code	Description	Boss cap for
29451-*	ECB.I3-*	ETK.400

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole.
Revolving handle I.631+x (see page 580) in technopolymer, not removable.

SPECIAL EXECUTIONS ON REQUEST
Bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).
To order the handwheel with keyway add the index -K after the code and the description (i.e. 207731-K- ETK.400+I A-20-K-).
For sufficient quantities: executions with locking device (Elesa patent), (see page 155).
The three-arm handwheels can be customised with marks, logo or special graphics (tampoprinting). The handwheels or handles can be supplied also in special coloured technopolymer.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).

ERGONOMY AND DESIGN
The three equidistant arms (120°) offer a perfect grip and the greatest operational easiness, also to disabled people. The rounded lines, the special compact and ergonomic shape of ETK. handwheel design together with the absence of cavities offer an excellent level of safety for hands during the steering operations.

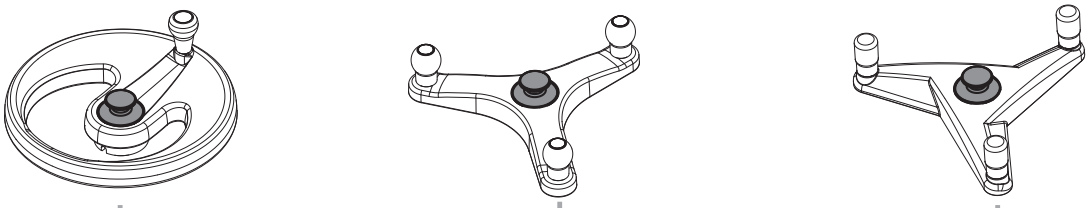
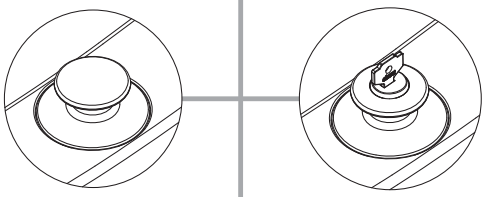
Executions on request with locking and status indicators

Elesa European and US patent

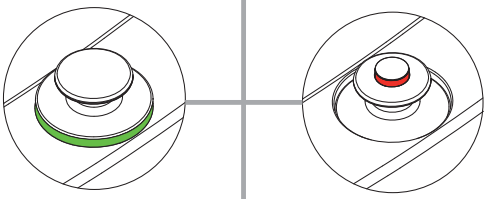


- **L Simple actuator**
  By pressing the actuator the rotation of the handwheel locks. Also available with label customizable with graphic symbols, marks or special graphics.



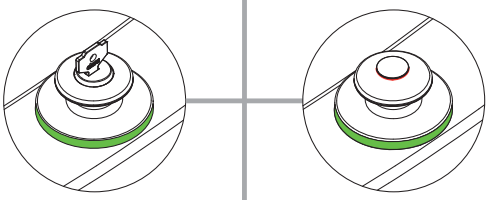
- **L-K Actuator with lock**
  By pressing the actuator the rotation of the handwheel locks. By turning the key by 180° the actuator remains in the locked position.

- **LCV Actuator with green collar**
  The green collar indicates that the handwheel is free and it can be operated. By pressing the actuator the rotation of the handwheel locks (the green collar is no longer visible).



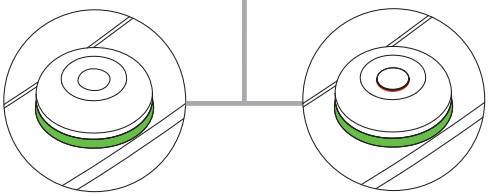
- **L-R Actuator with red ring**
  By pressing the actuator the rotation of the handwheel locks. The red ring comes out from the actuator and indicates that the handwheel is locked.

- **LCV-K Actuator with green collar and lock**
  The green collar indicates that the handwheel is free and it can be operated. By pressing the actuator the rotation of the handwheel locks (the green collar is no longer visible). By turning the key by 180° the actuator remains in the locked position.

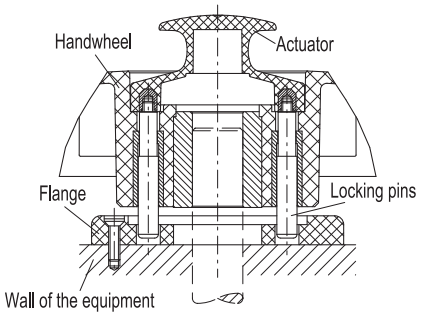


- **LCV-R Actuator with green collar and red ring**
  The green collar indicates that the handwheel is free and it can be operated (the red ring is not visible).
  By pressing the actuator the rotation of the handwheel locks. The red ring comes out from the actuator and indicates that the handwheel is locked (the green collar is no longer visible).

- **PHCV "Push-push" actuator with green collar**
  The green collar indicates that the handwheel is free and it can be operated. By pressing the actuator the rotation of the handwheel locks or unlocks. It is the ideal solution also for disabled operators according to ADA regulations (Americans with Disability Act).

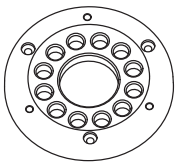


- **PHCV-R "Push-push" actuator with green collar and red ring**
  The green collar indicates that the handwheel is free and it can be operated (the red ring is not visible).
  By pressing the actuator the rotation of the handwheel locks or unlocks. The red ring comes out from the actuator and indicates that the handwheel is locked (the green collar is no longer visible). It is the ideal solution also for disabled operators according to ADA regulations (Americans with Disability Act).



Fitting to shaft by means of a transversal screw

- **FF Locking flange (accessory)**
  Polyamide-based SUPER-technopolymer (PA), black colour, matte finish. The flange is provided with 12 holes (radially positioned every 30 °) for the engagement of the locking pins of the handwheel. Mounting of the flange on the wall of the equipment by means of 3 holes for countersunk head screws. Additional 3 holes to position any reference pin.



- **PP Pre-loaded pins**
  Locking pins with preloading spring for automatic fitting into the locking holes (Applicable to all executions).

To request the handwheels with locking device, contact Elesa sales office specifying: type of handwheel (eg. EYK.), locking device (eg. LCV), any pre-loaded pin (PP) and locking flange (FF).

Solid handwheels

Technopolymer

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

BOSS CAP
Acetal resin based (POM) technopolymer, light-grey colour, push-fit assembly.

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole.
- **VDS.:** without handle.
- **VDS+I:** with revolving handle I.621+x (see page 576) in technopolymer.
- **VDS+IEL:** with revolving handle IEL+x-SOFT (see page 572) in technopolymer coated with "Soft touch" thermoplastic elastomer (TPE).
- **VDS+IR:** with fold-away handle IR.620 (see page 584) in technopolymer.
- **VDS+IRS:** with safety fold-away handle IRS.820 (see page 589) in technopolymer.

AISI 304 stainless steel boss, H7 reamed hole.
- **VDS-SST**: without handle.
- **VDS+I-SST**: with revolving handle I.621+x-SST (see page 576) in technopolymer.
- **VDS+IR-SST**: with fold-away handle IR.620-SST (see page 584) in technopolymer.
- **VDS+IRS-SST**: with safety fold-away handle IRS.820-SST (see page 589) in technopolymer.

SPECIAL EXECUTIONS ON REQUEST
Bosses with hole and keyway in compliance with DIN 6885/1tolerance P9 (see page A16).
To order the handwheel with keyway add the index -K after the code and the description (i.e. 72661-R-K VDS.100 A-10-K).

ACCESSORIES ON REQUEST
- Axial retaining washer in black-oxide steel GN 184 (see page 971) or in AISI 303 stainless steel GN 184.5 (see page 971).
- VDS.125, VDS.150 and VDS.175 are available also with technopolymer boss caps in one of the Ergostyle colours (see ECB. table).

RoHS PA +100° -30°

Solid handwheels

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

BOSS CAP
Acetal resin based (POM) technopolymer, black colour, matte finish, push-fit assembly.

RING
Matte anodised aluminium.
(ELESA original design - Reg. U.S. Pat.& TM Off.)

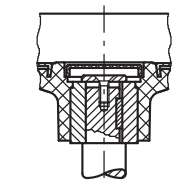
STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole.
- **VDT.:** without handle.
- **VDT+I:** with revolving handle I.621+x (see page 576) in technopolymer.
- **VDT+IR:** with fold-away handle IR.620 (see page 584) in technopolymer.

SPECIAL EXECUTIONS ON REQUEST
Black-oxide steel bosses with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16).
To order the handwheel with keyway complete code and description with the index -K (i.e. 170307-K VDT.100 A-10-K).

ACCESSORIES ON REQUEST
Axial retaining washer type GN 184 (see page 971).

ERGONOMY
The rim with internal rear scallops makes the grip and the manoeuvre of the handwheel easier.

ELESA Original design iF design award winner 2003



Assembly example
with keyway and axial set screw

Solid handwheels

Duroplast

MATERIAL
High-strength, reinforced phenolic based (PF) Duroplast, black colour, glossy finish.

RING
Matte anodised aluminium.
(ELESA Original design - Reg. U.S. Pat. & TM Off.)

STANDARD EXECUTIONS
- **VDN.FP-A**: without handle, black-oxide steel hub, H7 reamed hole.
- **VDN.FP+I-A**: with revolving handle I.301+x (see page 574) in Duroplast. Black-oxide steel hub, H7 reamed hole.
- **VDN.FP+IR-A**: with fold-away handle IR.407 in Duroplast. Black-oxide steel hub, H7 reamed hole.
- **VDN.FP+IRS-A**: with automatic fold-away safety handle "Fold-O-matic"® type IRS.820 (see page 589) in technopolymer. Black-oxide steel hub, H7 reamed hole.
- **VDN.FP**: without handle, black-oxide steel hub, not drilled.
- **VDN.FP-SST**: without handle, AISI 303 stainless steel hub, not drilled.
- **VDN.FP+I**: with revolving handle I.301+x (see page 574) in Duroplast. Black-oxide steel hub, not drilled.
- **VDN.FP+I-SST**: with revolving handle I.301+x-SST (see page 574) in Duroplast. AISI 303 stainless steel hub, not drilled.
- **VDN.FP+IR**: with fold-away handle IR.407 in Duroplast. Black-oxide steel hub, not drilled.

SPECIAL EXECUTIONS ON REQUEST
- Hub with hole and keyway in compliance with DIN 6885/1 tolerance P9 (see page A16)

To order the handwheel with keyway complete code and description with the index -K (i.e. 73710-10-K VDN.100 FP+I-A-10-K).
- Handlwheels with incorporated balancing counterweights.

ACCESSORIES ON REQUEST
Axial retaining washer in black-oxide steel GN 184 (see page 971) or in AISI 303 stainless steel GN 184.5 (see page 971).

ERGONOMY
The rim with internal rear scallops makes the grip and the manoeuvre of the handwheel easier.

Safety solid handwheels

Duroplast

MATERIAL
High-strength, reinforced phenolic based (PF) Duroplast, black colour, glossy finish.

RING
Matte anodised aluminium.
(ELESA Original design - Reg. U.S. Pat. & TM Off.)

STANDARD EXECUTION
Safety coupling bushing with "Pull-coupling" assembly GN 000.5 (see page 185) hardened steel with ground sliding surfaces, reamed assembly hole and keyway in compliance with DIN 6885/2 tolerance P9 (see page A16).
Revolving handle I.301+x (see page 574) in Duroplast.

SPECIAL EXECUTIONS ON REQUEST
These handwheels can be supplied with "Push-coupling". By inserting the bushing the other way round, the handwheel operates opposite to the standard way.

INSTRUCTIONS OF USE
Safety handwheels are designed in accordance with accident prevention rules: in case of push or accidental pressure when the machine is operating, the handwheel is disengaged and is in the rest position. Only by "Pulling" the handwheel parallel to the axis can the shaft operate: the two toothed elements inside the bushing fit into each other in order to couple the handwheel to the shaft. The handwheel returns automatically to its rest position when it is released after the operation.

ERGONOMY
The rim with internal rear scallops makes the grip and the manoeuvre of the handwheel easier.

Disc handwheels

Aluminium, plastic coated

reddot design award

SPECIFICATION

Types

- Type **A**: without handle
- Type **R**: with revolving handle

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway

Aluminium pressure die casting

- Hub machined
- Rim turned
- plastic coated

black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Rim concentric and square to bore < 0.4

Cylindrical Revolving handles GN 798.2 (see page 578)
Plastic, Technopolymer
black, matt

INFORMATION

Disc handwheels GN 923 are distinguished by modern design.
The removable plastic cover shrouds the fixing components such as screws, countersunk washers as well as the shaft end.

ACCESSORY

- Countersunk washers GN 184 (see page 971) are to be ordered separately
  screws, countersunk washers as well as the shaft end.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

GN 923.3

Handwheels with retractable handle

Aluminium, Handle locked

SPECIFICATION

Type
- Type **R**: with retractable handle

Bore codes
- Version **B**: without keyway
- Version **K**: with keyway

Aluminium pressure die casting
- Hub machined
- Rim turned
- plastic coated

black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

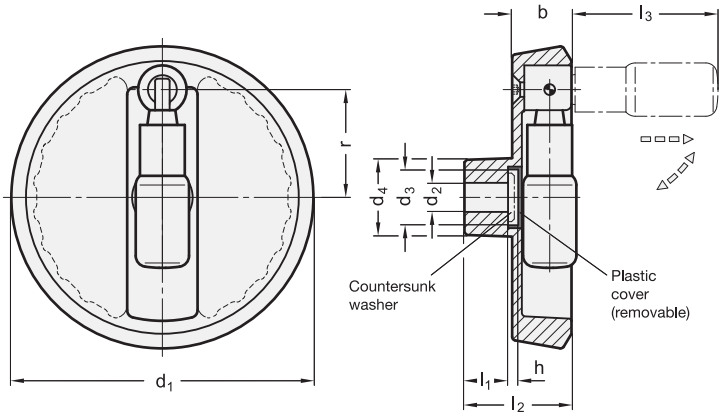
Rim concentric and square to bore < 0.4

Retractable handles GN 798.3 (see page 586)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

The handle in these disc handwheels is locked in a conical bore in the operating position.
For reversal, it must first be pulled from the cone in axial direction.
A pressure spring holds the handle in both positions. When swung out, it automatically engages again.



*Complete with colour index of the Handwheels (SW or SR)

SW RAL9005 SR RAL9006

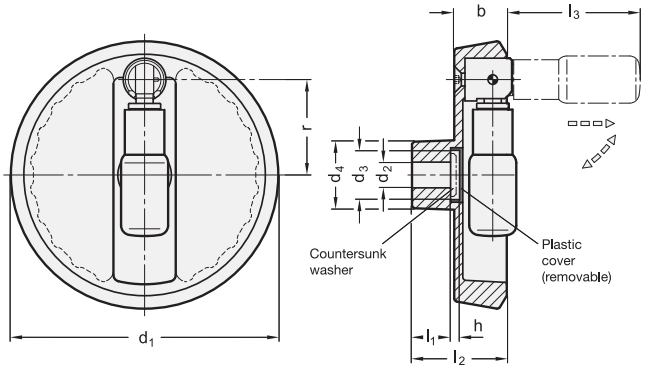
Safety retractable handles GN 798.7 (see page 587)
Plastic, Technopolymer
black, matt

Retracting mechanism
Steel, blackened

INFORMATION

Disc handwheels GN 923.7 are distinguished by modern design.
These handwheels are suitable for applications where the handle must not remain in the operating position.
In order to bring the handle into this position it has to be turned first through 90° to a stop against a torsion spring and then it is pushed against spring pressure into its hold position. By maintaining the forward thrust on the handle the handwheel can easily be rotated.
When releasing the handle the springs returns it back to the retracted position.



*Complete with colour index of the Handwheels (SW or SR)

SW RAL9005 SR RAL9006

Safety handwheels

friction bearing

SPECIFICATION

Types

- Type **A**: without handle
- Type **D**: with revolving steel handle

Coding

- Version **ZI**: engage by pulling
- Version **DR**: engage by pushing

Aluminium

- Hub machined
- Rim turned

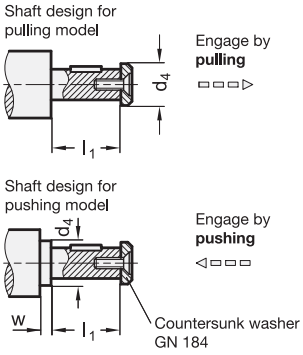
Rim concentric and square to bore < 0.4

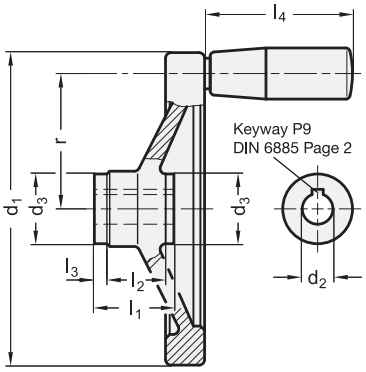
Wheel body
plastic coated
black, textured finish

Cylindrical Revolving handles GN 598 (see page 573)
Steel, plastic coated
black, matt

INFORMATION

The use of coupling attachments in handwheels other than specified is also possible.
- Instructions for safety handwheels (see page 133)





*Complete with Coding of the Handwheels (ZI or DR)

Safety handwheels

Aluminium, with needle bearings

SPECIFICATION

Types

- Type **A**: without handle
- Type **D**: with revolving handle

Handwheel body

- Aluminium
- Rim turned and polished
- unmachined surfaces plastic coated black, matt

Coupling elements

- Steel, hardened
- Glide surfaces honed

Cover cap
Plastic, light grey

Cylindrical Revolving handles GN 598 (see page 573)
Steel, plastic coated
black, matt

INFORMATION

The hub cap protects the bearing from the ingress of dust and at the same time acts as a shroud for the mounting components.
The wheel hub is fitted with an inside groove to retain the hub cap on its segmented edge.
The hub cap is pushed into position by hand and it can be removed by levering it away at the relieved point with a screw driver.
The needle bearings are greased on assembly which should be ample for permanent lubrication.

Safety handwheels

Aluminium, fixed bearing flange

SPECIFICATION

Types

- Type **A**: without handle
- Type **D**: with revolving handle

Identification no.

- Version **1**: with bearing bush
- Version **2**: with centring ring

Handwheel body
Aluminium
Rim turned and polished

Coupling elements

- Steel, nitrided
- Bearing surface ground and / or PTFE-coated
- Bearing flange blackened

Cylindrical Revolving handles GN 598 (see page 573)
Plastic, Duroplast
black, shiny finish

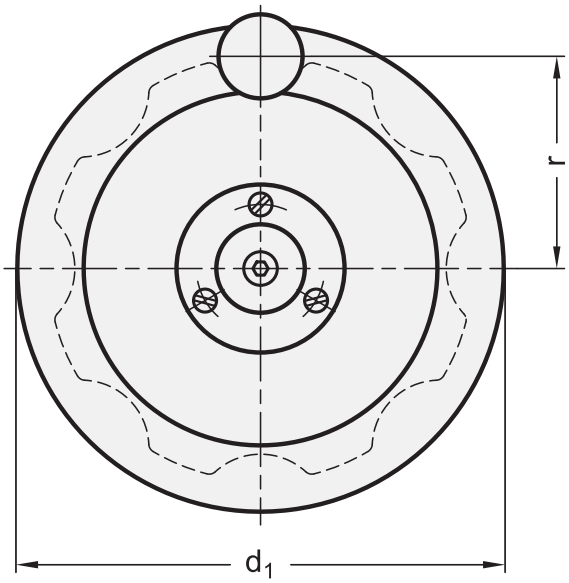
INFORMATION

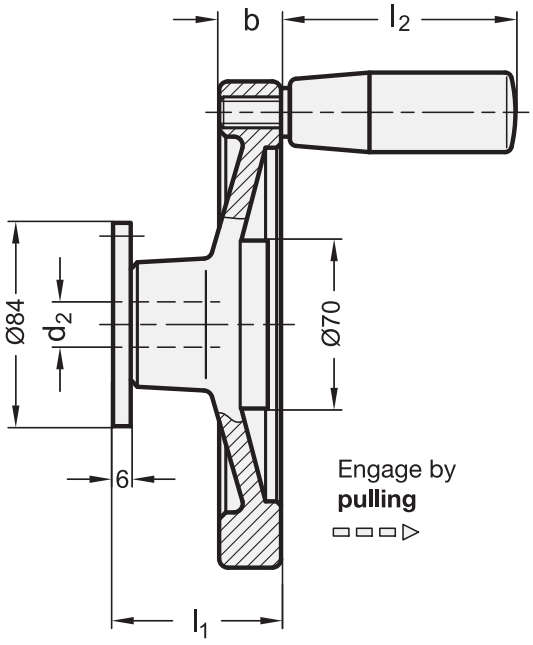
Safety handwheels GN 327 feature the ultimate in health and safety at work standards because the handwheel, if disengaged, is mounted on a fixed component, the bearing flange. The wheel is fully disengaged from the rotating shaft.
The bearing flange can also accept the bearing of the shaft via the bearing bushing (code No. 1). This bearing bushing is a dry bearing (DU bushing). Normally, the shaft has a separate bearing and the bearing bushing serves to center the bearing flange.
Centering can also be effected by a centering ring (code No. 2) if the appropriate bore hole has been made at the machine side. In this case there is no need for the bearing bushes and no bearing friction (heating) will occur.

- Instructions for safety handwheels (see page 133)

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- ISO-Fundamental Tolerances (see page A21)





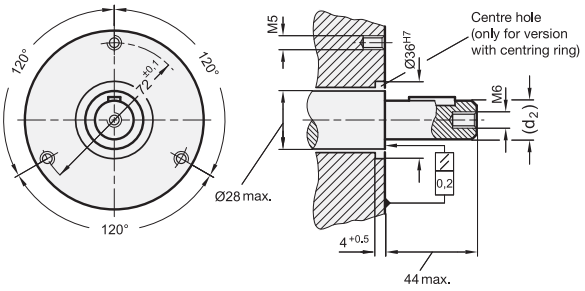
ASSEMBLY INSTRUCTIONS

Shaft bush and countershaft pulley are delivered in two separate components. Before assembly, make sure that the shaft bush can be pushed smoothly and free-moving over the shaft.
Proper function is guaranteed only if:
- shaft bush and bearing surface are level with each other
- the shaft axis lies at a right angle to the bearing surface on the machine side.

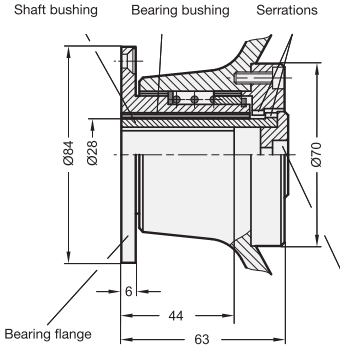
Design with bearing bush (Mode 1)
Push the handwheel and the shaft bush at the same time over the shaft, bolt down the bearing flange, and fix the shaft bush axially with the countershaft pulley

Design with centring ring (Mode 2)
The handwheel can be bolted at once through the centring ring above the bearing flange. Then push the shaft bush onto the shaft and fix it axially with the countershaft pulley.

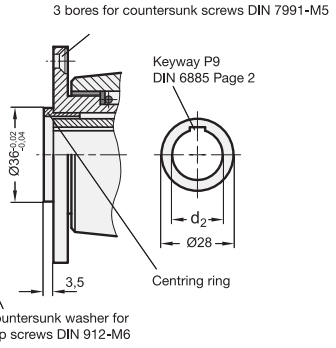
Specification of shaft and dimensions



with bearing bush: Identification no. 1



with centring ring: Identification no. 2



*Complete with Identification no. of the Handwheel (1 or 2)

1 bearing bush
2 centring ring

Weight Identification no. 1

Coupling attachments

for safety handwheels, with friction bearing

SPECIFICATION

Steel
nitrided

Bearing surface ground and / or PTFE-coated

INFORMATION

The PTFE-coated surfaces of the coupling attachments GN 000.4 provide minimal friction between bearing surfaces even when lubrication is being neglected.
An oil-hole is provided which in the completely assembled safety handwheel connects with the wheel hub.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- ISO-Fundamental Tolerances (see page A21)

GN 000.5

Coupling attachments

for safety handwheels, with needle bearing

SPECIFICATION

Steel
hardened

Bearing surfaces ground

INFORMATION

The use of needle bearings and the hardened bearing surfaces make the clutch engagement extremely easy. This is also assisted by the finer teeth of the clutch and the increased length of the coupling attachment.
It is suitability for high shaft speeds, especially when these are maintained for long periods, is a further advantage of the needle bearing.
An oil-hole is provided which in the completely assembled safety handwheel connects with the wheel hub.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- ISO-Fundamental Tolerances (see page A21)

Disc handwheels

Aluminium

SPECIFICATION

Bore codes

- Version **B**: without keyway
- Version **K**: with keyway

Aluminium

- Hub machined
- Rim turned and polished
- Unmachined body shot-blasted

Rim concentric and square to bore < 0.4

INFORMATION

Disc handwheels DIN 3670 have recessed grips at their back. As a rule they are supplied without handle, but the mounting of a handle is possible.
The handwheel diameter d_1=80 and d_1=400 are not provided in the official standard sheet.

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Crank handles

Technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, greyblack colour, matte finish.

STANDARD EXECUTIONS

Brass boss, cylindrical blind hole, transversal semi-machined hole for pinning to shaft.
Revolving handle I.741+x (see page 581) in technopolymer.
The grooves cut into the cylindrical surface allow an effective and ergonomic grip, though necessarily limited to the fingertips, due to the small size of the handle.

Crank handles

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

SELF-ADHESIVE FRONT PLATE
Anodised aluminium.

STANDARD EXECUTIONS
- **MT.:** with revolving handle I.601+x (see page 575) in technopolymer. Black-oxide steel hub, H9 blind hole or H7 reamed pass-through hole.
- **MT-AS:** with revolving handle I.601+x (see page 575) in technopolymer. Black-oxide steel boss with H9 square pass-through hole.

MT.50-AS H9 square pass-through hole with brass reinforcement.
- **MT+IR:** with fold-away handle IR.602 in technopolymer. Black-oxide steel hub, H9 blind hole or H7 reamed pass-through hole.

FEATURES AND APPLICATIONS
The reticular structure of the crank arm and the technopolymer used make this handle very strong and therefore suitable for transmitting high torque values.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).

Crank handles

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

HUB CAP
Glass-fibre reinforced polyamide based (PA) technopolymer, in Ergostyle colours, matte finish, press-fit assembly.
Available also as accessory sold separately (see table ECM.).

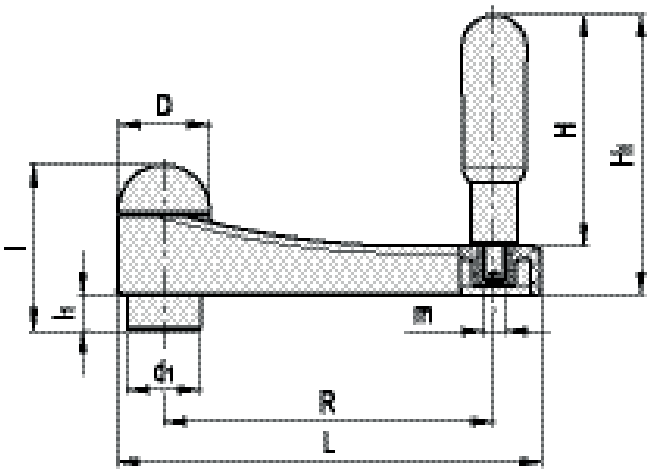
Code	Description	Boss cap for
29633-*	ECM.K3-*	EKH.100
29634-*	ECM.K4-*	EKH.125

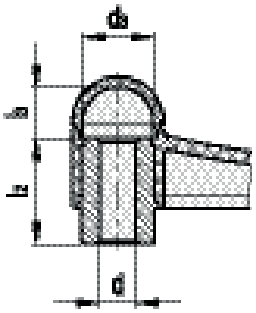
* Complete with colour index (C1, ..., C6).

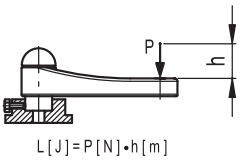
STANDARD EXECUTION
Black-oxide steel hub, H7 reamed hole.
Revolving handle I.621+x (see page 576) in technopolymer.

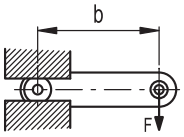
FEATURES AND APPLICATIONS
The reticular structure of the crank arm and the technopolymer used make this handle very strong and therefore suitable for transmitting high torque values.

ACCESSORIES ON REQUEST
Axial retaining washer GN 184 (see page 971).









*Complete with colour index, example: 210241-C2 EKH.100 A-12-C2

Stainless Steel-Cranked handles

SPECIFICATION

Body

- Stainless Steel precision die casting
- AISI CF-8
- Face of the hub machined

Revolving handles
Plastic, Duroplast
black, shiny finish

Spindle
Stainless Steel AISI 304

INFORMATION

Stainless Steel-Cranked handles GN 269 have been designed to comply with stringent hygiene requirements.
The cylindrical handles are made of thermoset material which in general provides good stability when exposed to chemicals.

ON REQUEST

- Stainless Steel-Cranked handles with retractable handle GN 798.5 (see page 586)

TECHNICAL INFORMATION

- Square DIN 79 (see page A16)
- Cross holes GN 110 (see page A17)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Cranks

Steel

SPECIFICATION

Types

- Type **A**: without slot
- Type **N**: with slot

Steel

- shot-blasted and nickel plated
- Crank butt-welded

Plastic cap
black

Cylindrical Revolving handles GN 598 (see page 573)
Plastic, Duroplast
black, shiny finish

INFORMATION

Cranks GN 369 are for light duty applications and are of extremely good value.
A suitable dowel in the shaft and the slot in the handle provides a cheap connection to the shaft. To secure the handle permanently to the shaft, remove the plastic cap and insert screw.
Due to the production method which is not dependent on a specific shape, these cranked handles can be produced as specials at a competitive price.

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Cranked handles with rectractable handle

Aluminium

SPECIFICATION

Body

- Aluminium
- plastic coated, black, textured finish
- hub machined

Retractable handles GN 598.3 (see page 585)
Plastic, Duroplast
black, shiny finish

Retractable mechanism
Steel, blackened

INFORMATION

The handpiece of cranked handles GN 471.3 is locked in a tapered bore in the operating position.
For tilting, the handle must first be pulled out of the taper in axial direction.
A compression spring holds the handle in both end positions. When folded out, it automatically re-engages.

Weight type F

Indexing cranked handles

SPECIFICATION

Bores

- Bore **B**: without keyway
- Bore **K**: with keyway

Body
Cast iron (GGG)

- deburred and shot-blasted
- hub machined

Handle
Steel, blackened

Indexing pin
Steel, hardened

INFORMATION

Indexing cranked handles GN 558 are for positioning mechanisms. Standard machine elements for positioning of spindles:

- Indexing mechanisms GN 200 (see page 622)
- Indexing levers GN 215 (see page 634)
- Adjustable knobs GN 700 (see page 624)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Keyway P9 DIN 6885 (see page A16)

GN 112.1

Control handles

Zinc die casting

SPECIFICATION

Body
Zinc die casting
plastic coated
black, textured finish

Cylindrical Revolving handles GN 598 (see page 573)
Plastic, Technopolymer
black, matt finish

INFORMATION

Control handles GN 112.1 allow fine adjustment.
They are connected to a shaft by means of a cross pin. To simplify the installation threre is a centred drilling on both sides.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

Balanced crank handles

Duroplast

MATERIAL
Reinforced phenolic based (PF) Duroplast. Polyamide based (PA) technopolymer for ME.95, black colour, glossy finish. Balancing by means of an incorporated counterweight

FRONT PLATE
Matte anodised aluminium (ELESA original design).

STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole. Reamed hole provided with centres already drilled for pinning to shaft. Use pins with smaller diameter than the one of the already drilled hole to avoid local stress. Revolving handle I.301+x (see page 574) in Duroplast.

Balanced crank handle

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour matte finish. Balancing by means of an incorporated counterweight.

CENTRE CLOSING CAP
Technopolymer, black colour. On request and for sufficient quantities it can be supplied in other colours and customised with marks or words.

STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole.
Reamed hole provided with centres already drilled for pinning to shaft.
Revolving handle I.601+x (see page 575) in technopolymer.

FEATURES
Its surface with matte finish allows a sensible grip during operation, even in case of short approach controls. The revolving handle makes high-speed rotation easier.

2 Clamping knobs

Lobe knobs

Star knobs

Knurled knobs

Wing knobs

VB.639

Three-arm knobs

Technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
VB.639/130: glass-fibre reinforced polypropylene based (PP) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **VB.639-A**: black-oxide steel boss, plain blind hole.
- **VB.639-B**: brass boss, threaded blind hole.
- **VB.639-FP**: brass boss, threaded pass-through hole.
- **VB.639-p**: zinc-plated steel threaded stud with chamfered flat end as in UNI 947 : ISO 4753 (see Technical data on page A11).
- **VB.639-SST**: AISI 303 stainless steel boss, threaded blind hole.

APPLICATIONS

This knob has been designed for heavy duty work where the use of a hammer for a firmer clamping action is required.

ELESA Original design

Knobs with solid section

Technopolymer, easy cleaning

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **VTT**: brass boss, threaded blind hole.
- **VTT-SST**: AISI 304 stainless steel boss, threaded blind hole.
- **VTT-p**: zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).
- **VTT-SST-p**: AISI 304 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS

The three-lobe shape with large recesses is particularly ergonomic also for smaller knobs, ensuring an effective grip even with work gloves. The design without rear recesses, generally suitable for reducing thickness, prevents unhealthy residues from depositing, ensuring maximum easy cleaning. Particularly suitable for applications on machines and equipment whose parts must be frequently cleaned by using water jets or steam.

VTT-CLEAN

Knobs with solid section

Technopolymer, easy cleaning

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, white colour similar to RAL 9002, matte finish.

STANDARD EXECUTION
AISI 304 stainless steel boss, threaded blind hole.

Ergonomic Design

Three ample lobes to offer a safe and effective grip to the operator even with smaller diameters when wearing gloves too.

Easy cleaning

The absence of recesses prevent unhealthy residues or dust from depositing ensuring maximum cleaning.

ELESA Original design

Knobs with solid section

with retaining chain, technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
Elastic fork in acetal based technopolymer (POM), black colour.

RETAINING CHAIN

Ball cable and coupling heads in acetal resin based (POM) technopolymer, black colour.
NERINOX treated stainless steel ring with two coils.
Head fastening by means of a self-tapping screw ø4.8 mm UNI EN ISO 7050 or a M5 countersunk-head screw UNI EN ISO 10642.

STANDARD EXECUTIONS

- **VTT-B-LP**: brass boss, threaded blind hole.
- **VTT-SST-LP**: AISI 304 stainless steel boss, threaded blind hole.
- **VTT-p-LP**: zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).
- **VTT-SST-p-LP**: AISI 304 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS

Suitable where it is necessary to prevent the loss of the knob.
The elastic fork, housed in the groove of the knob can turn freely. The coiled ring connects the fork to the chain.
The three-lobe shape with large recesses is particularly ergonomic also for smaller knobs, ensuring an effective grip even with work gloves.
The design without rear cavities, generally suitable for reducing thickness, prevents unhealthy residues from depositing, ensuring easy cleaning. Particularly suitable for applications on machines and equipment whose parts must be frequently cleaned by using water jets or steam.

SPECIAL EXECUTIONS ON REQUEST

- Chain in different lengths.
- Knob with stainless steel cable GN 111 (see page 904), GN 111.2 (see page 906) and GN 111.4 (see page 908).

GN 5345

Stainless Steel-
Three lobe knobs

Material AISI 303 (A2)

SPECIFICATION

Types

- Type **A**: without bore
- Type **E**: with threaded blind bore
- Type **D**: with threaded through bore
- Type **C**: with plain blind bore H7

Stainless Steel AISI 303
Stainless Steel AISI 316L (A4)
matt shot-blasted

INFORMATION

Stainless Steel-Three lobe knobs GN 5345 have a smooth and sealed surface. They are particularly suitable for use where hygiene requirements are high. Their shape allows relatively high torques to be applied.

ON REQUEST

- highly polished (PL)

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Lobe knobs

Technopolymer

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish. VCT.25: glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

COLOURED CENTRE CAP
Technopolymer, matte finish. Not available for VCT.25.
To order, add the index of the desired colour (C9, ..., C6) to the code and the description.
On request and for sufficient quantities it can be supplied in other colours or with customised graphic symbols, marks or writings.

STANDARD EXECUTIONS
- **VCT-A**: black-oxide steel boss, plain blind hole.
- **VCT-B**: brass boss, threaded blind hole (VCT.25 - 95) or threaded pass-through hole (VCT.32 - 40 - 50 - 63 - 74).
- **VCT.FP**: brass boss, threaded pass-through hole.
- **VCT-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

ACCESSORIES ON REQUEST
Coloured centre caps (see table).

"Max limit Tightening torque" means the max torque value at which the metal insert, in normal conditions of use, is perfectly and strongly anchored to the plastic material.

VCT.AE-V0

Lobe knobs

Technopolymer certified self-extinguish

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer certified self-extinguishing UL-94 V0.

STANDARD EXECUTION
Brass boss with threaded blind hole (VCT.25) or pass-through hole (VCT. from 32 to 50).

TECHNICAL DATA
In long-term thermal ageing tests, with a maximum decrease in critical mechanical properties by 50%, the relative temperature index UL 746 B (RTI) was equal to 65.
The "V0" certification in accordance with UL-94 V (Underwriters Laboratories) (see page A5) indicates that on a plastic test sample with specific shape and dimensions, in the vertical position, the flame is extinguished within 10 seconds, without generating incandescent drops.

Lobe knobs

with retaining chain, technopolymer

ELESA Original design

MATERIAL

High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.
Technopolymer centre cap, black colour, matte finish. Not available for VCT.25.
Elastic fork in acetal based technopolymer (POM), black colour.

RETAINING CHAIN

Ball cable and coupling heads in acetal resin based (POM) technopolymer, black colour.
NERINOX treated stainless steel ring with two coils.
Head fastening by means of a self-tapping screw ø4.8 mm UNI EN ISO 7050 or a M5 countersunk-head screw UNI EN ISO 10642.

STANDARD EXECUTION

- **VCT-B-LP**: brass boss, threaded pass-through hole.
- **VCT-p-LP**: zinc-plated steel threaded stud chamfered flat end according to UNI 947: ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS

The elastic fork, housed in the groove of the knob can turn freely. The coiled ring connects the fork to the chain.
Suitable where it is necessary to prevent the loss of the knob.

SPECIAL EXECUTIONS ON REQUEST

- Chain in different lengths.
- Knob with stainless steel cable GN 111 (see page 904), GN 111.2 (see page 906) and GN 111.4 (see page 908).

Lobe knobs

"Soft-touch" technopolymer

MATERIAL

High-resilience polypropylene based (PP) technopolymer, coated with thermoplastic elastomer (TPE) "soft-touch" chemically bonded, hardness 70 Shore A.
The coating material is certified according to FDA (U.S. Food and Drug administration), black colour, matte finish.

COLOURED CENTRE CAP

Polypropylene based (PP) technopolymer, in the six standard colours, matte finish.
On request and for sufficient quantities, it can be supplied in other colours or with customised graphic symbols, marks or writings.

STANDARD EXECUTIONS

- **VCT-B-SOFT:** brass boss, threaded blind hole.
- **VCT-p-SOFT:** zinc-plated steel threaded stud with chamfered flat end as in UNI 947 : ISO 4753 (see Technical data on page A11).

"Max limit Tightening torque" means the max torque value at which the metal insert, in normal conditions of use, is perfectly and strongly anchored to the plastic material.

VC.692

Lobe knobs with solid section

Technopolymer, easy cleaning

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **VC.692-B:** brass boss, threaded blind hole.
- **VC.692-SST:** AISI 303 stainless steel boss, threaded blind hole.
- **VC.692-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).
- **VC.692-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS

The exclusive five-lobe shape (ELESA original design) offers the operator's fingers a proper grip and prevents unhealthy residues from depositing thanks to its solid shape without cavities.
The metal insert in AISI 303 stainless steel can be used in sectors where corrosion resistant materials are required.

VC.692-CLEAN

Lobe knobs

Technopolymer, easy cleaning

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, white colour similar to RAL 9002, matte finish.

STANDARD EXECUTION
AISI 303 stainless steel boss, threaded blind hole.

FEATURES AND APPLICATIONS
The exclusive five-lobe shape (ELESA original design) offers the operator's fingers a proper grip and prevents unhealthy residues from depositing thanks to its solid shape without cavities.
This knob is particularly suitable for applications on machines and equipment whose parts must be frequently cleaned by using water jets or steam.
The metal insert in AISI 303 stainless steel can be used in sectors where corrosion resistant materials are required.

VC.692-CR

Lobe knobs

Technopolymer chrome-plate

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, chrome-plated, glossy finish.

STANDARD EXECUTION
Brass boss, threaded blind hole.

FEATURES AND APPLICATIONS
The exclusive five-lobe shape (ELESA original design) offers the operator's fingers a proper grip and prevents unhealthy residues from depositing thanks to its solid shape without cavities.

CHEMICAL AGENTS RESISTANCE
This knob is particularly suitable for applications on machines and equipment whose parts, for hygienic reasons, must be frequently cleaned also using water or steam jets. The chrome-plating makes the surface finish semi-glossy and homogeneous to facilitate cleaning operations. The chrome-plated surface is resistant to wear, scrapes and shocks. In laboratory tests carried out at ambient temperature (23°C), the chrome-plated surface revealed to be resistant to: sea water, detergents, acetone, ethyl alcohol, formic acid, chlorine solutions.

VC.692-SST-p-P

Lobe knobs with solid section

Technopolymer, pad

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **VC.692-SST-p-PO**: AISI 303 stainless steel threaded stud, chamfered end with acetal resin (POM) pad.
- **VC.692-SST-p-PB**: AISI 303 stainless steel threaded stud, chamfered end with brass pad.

FEATURES AND APPLICATIONS

The chamfered end with bolt avoids to damage the surface of contact even in case of strong clamping.
Standard executions either with brass or acetal resin pad.

GN 5334

Stainless Steel-Star knobs

Stainless Steel AISI 304 (A2)

SPECIFICATION

Version with female thread:

Types

- Type **E**: with threaded blind bore
- Type **C**: with plain blind bore H7

Stainless Steel AISI 304 (A2)

Stainless Steel AISI 316L (A4)

- Knob drawn from Stainless Steel sheet
- Hub welded
- matt shot-blasted

Version with threaded bolt:

Stainless Steel AISI 304 (A2)

Stainless Steel AISI 316L (A4)

- Knob drawn from Stainless Steel sheet
- Hub with threaded bolt welded
- matt shot-blasted

INFORMATION

The original ELESA design with 5 recess grips is typical for GN 5334 star knobs.
This form gives these grips an appealing look and additionally allows a high torque to be achieved.

TECHNICAL INFORMATION

- Cross holes GN 110 (see pageA17)
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

GN 5336

RoHS

Star knobs

Aluminium

SPECIFICATION

Types

- Type **A**: without bore
- Type **C**: with plain blind bore H7
- Type **D**: with threaded through bore
- Type **E**: with threaded blind bore

Aluminium

- matt finish (ground), flash mark not visible **MT**
- polished **PL**

Type **A** (without bore) is only available with a matt finish (**MT**)

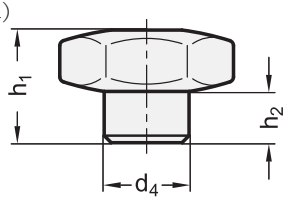
INFORMATION

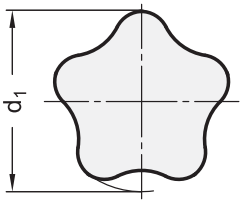
Star knobs GN 5336 are forged, therefore a close grain structure is maintained providing a high tensile strength and a smooth surface. Original ELESA design, now produced in metal in agreement with ELESA s.p.a.

TECHNICAL INFORMATION

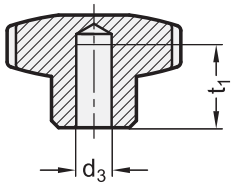
- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)

Type **A**

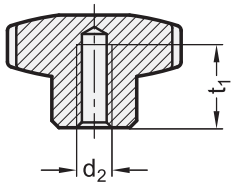




Type **C**



Type **E**



Type **D**

Stainless Steel-Star knobs

Stainless Steel AISI 316L (A4)

SPECIFICATION

Types

- Type **A**: without bore
- Type **E**: with threaded blind bore
- Type **D**: with threaded through bore
- Type **C**: with plain blind bore H7

Stainless Steel AISI 316L (A4)
matt shot-blasted

INFORMATION

Stainless Steel-Star knobs GN 5335.4 are a special development intended for the food processing machinery industry. The smooth and enclosed areas as well as the large corner radii comply with the requirements of hygiene standards.

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Stainless Steel-Star knobs

Stainless Steel AISI 303 (A2)

SPECIFICATION

Version with female thread:

Types

- Type **A**: without bore
- Type **E**: with threaded blind bore
- Type **D**: with threaded through bore
- Type **C**: with plain blind bore H7

Stainless Steel AISI 303

- matt shot-blasted
- highly polished PL (only type D and E)

Version with threaded bolt:

Stainless Steel AISI 303

- matt shot-blasted

INFORMATION

Stainless Steel-Star knobs GN 5335 are a special development intended for the food processing machinery industry. The smooth and enclosed areas as well as the large corner radii comply with the requirements of hygiene standards.

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Hand knobs

Cast iron / Threaded bolt, Steel

SPECIFICATION

Type

Type **SG**: Hand knobs DIN 6335 cast iron (GG) (see page 234)

The threaded bolt is screwed in and secured by a cross-dowel.

INFORMATION

Should clamping with the bush face be necessary, then it is recommendable to use this hand knobs.

- Type **ES**: Hand knobs DIN 6335, Stainless Steel precision casting (NI), matt shot-blasted

Hand knobs details and dimensions see:

- DIN 6335-AL (see page 234)
- DIN 6335-GG (see page 234)
- DIN 6335-NI (see page 234)

Threaded bolt
Stainless Steel AISI 303

The threaded bolt is screwed in and secured by a cross-dowel.

TECHNICAL INFORMATION

GN 6303.1

Quick release knurled nuts

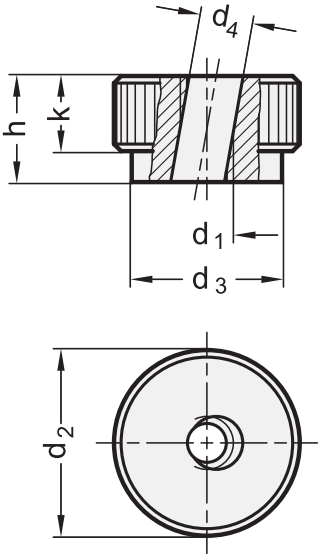
SPECIFICATION

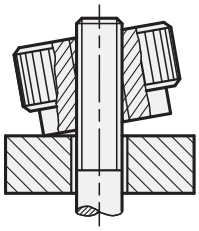
Steel

- Tensile strength class 5
- blackened

INFORMATION

Quick release knurled nuts GN 6303.1 are used in such applications where the nut has to be completely removed after the releasing operation and re-fitted rapidly for re-clamping.
The nut is tilted over the threaded spindle. When in position, the nut is brought into a straight position for meshing of the two threads on nut and spindle. The nut will then have to be turned only by a fraction of a rotation to achieve clamping.
Functional safety exists only if the clamping surface lies at a right angle to the threaded bolt.





Threaded bolt > h

Quick release star knobs

SPECIFICATION

Plastic
Technopolymer (Polyamide PA)

- shock-resistant
- black, matt finish

Bushing
Steel zinc plated, blue passivated
Stainless Steel AISI 303 **NI**

INFORMATION

Quick release star knobs GN 6336.3 are used in such applications where the knob has to be completely removed after the releasing operation and refitted rapidly for re-clamping.
The knob is tilted over the threaded spindle. When in position, the knob is brought into a straight position for meshing of the two threads on nut and spindle. The knob will then have to be turned only by fraction of a rotation to achieve clamping.
Functional safety exists only if the clamping surface lies at a right angle to the threaded bolt.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Stainless Steel characteristics (see page A26)

GN 6335.9

Hand knobs

with increased clamping force

SPECIFICATION

Plastic
Technopolymer (Polyamide PA)

- shock-resistant
- black, matt finish

Bushes
high quality steel
nitrided, blackened

INFORMATION

Hand knobs GN 6335.9 have a clamping contact area which is connected to the knob via an axial ball bearing. This has led to the following advantages:
Doubled clamping force through vastly reduced friction. There is no movement on the contact area between star knob and component which greatly reduces any marking on the clamping area. In addition a reduced creep factor has been achieved by the indreased preload.

ON REQUEST

- with threaded bolt

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

Safety lobe knobs

Technopolymer, push action

ELESA Original design

KNOB
Glass-fibre reinforced polyamide based (PA) technopolymer. Built-in zinc alloy toothed insert for coupling to the metal clamping element, black colour, matte finish.

CENTRE CLOSING CAP
Black technopolymer centre cap. On request and for sufficient quantities, it can be supplied in yellow RAL 1021 (safety) or in other colours, with customised graphic symbols, marks or writings.

STANDARD EXECUTIONS
The clamping element has a toothed element for coupling to the zinc alloy insert moulded-in the knob.
- **VCTS-Z:** black-oxide clamping element with threaded hole, black-oxide steel retaining screw. AISI 302 stainless steel return spring.
- **VCTS-Z-SST:** AISI 303 stainless steel clamping element with threaded hole, AISI 303 stainless steel retaining screw. AISI 302 stainless steel return spring.
- **VCTS-Z-p:** black-oxide steel clamping element with threaded stud, black-oxide steel retaining screw. AISI 302 stainless steel return spring.
- **VCTS-Z-SST-p:** AISI 303 stainless steel clamping element with threaded stud, AISI 303 stainless steel retaining screw. AISI 302 stainless steel return spring.

FEATURES AND APPLICATIONS
Particularly suitable where the knob needs to turn freely to avoid that clamping may be accidentally affected.

INSTRUCTIONS
Press the knob to engage the toothing and turn it.
By releasing the knob the spring releases the toothing, thus the knob returns to the rest position.

Safety lobe knobs

Technopolymer

LOBE SOLID CAP
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish, with security anti-intrusion-profiled key slot.

FLANGE
Technopolymer, ultrasonically welded.

CLAMPING ELEMENT
Acetal resin based (POM) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
- **VLS-B:** brass boss, threaded blind hole.
- **VLS-SST-p:** AISI 304 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

SECURITY KEY (TO BE ORDERED SEPARATELY)
- **CSN** (code 6951): acetal resin based (POM) technopolymer fold-away key, red colour, anti-intrusion-profiled stainless steel insert.
- **CSF** (code 6952): polyamide based (PA) technopolymer ball key, red colour, anti-intrusion-profiled stainless steel insert.

On request and for sufficient quantities the security keys can be supplied in black colour too.

SECURITY DEVICE OPERATION
VLS. security lobe knobs have been designed to be unscrewed only by authorised people, provided with the security key. Without the security key, the knob turns without unscrewing.
1. Clamping: clamp the knob by screwing it as for a normal knob. Mind that the security key is not inserted.
2. Unscrewing: simply insert the security key (without turning it) and unscrew the knob.

FEATURES AND APPLICATIONS
The particular design of the internal device and of the flange helps the drainage of any dirt (dust, earth, liquid).

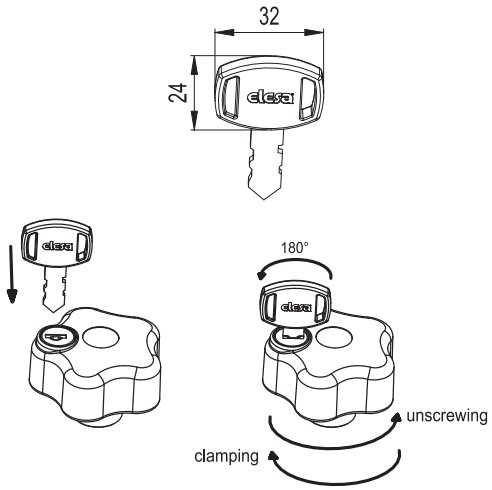
VLSK

Safety lobe knobs

Technopolymer, with lock

ELESA Original design



LOBE SOLID CAP AND COLOURED CENTRE CAP

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish, with slot for codified key lock.

FLANGE

Technopolymer, ultrasonically welded.

CLAMPING ELEMENT

Special glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **VLSK-B:** brass boss, threaded pass-through hole, with cap.
- **VLSK-FP:** brass boss, threaded pass-through hole, without cap.
- **VLSK-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical data on page A11), with closing cap.

LOCK AND KEYS

Die cast zinc alloy rotor and stator.
The lock has got a red protection tab for closing the lock when the key is not inserted.
Two keys made out of nickel-plated brass and technopolymer.
210 different combinations; each lock has got one pair of keys, removable in two positions at 180°.

SECURITY DEVICE OPERATION

VLSK. security lobe knob has been designed to prevent its unscrewing by unauthorised people. Therefore, it has got a vandal-proof function as well.
For clamping and unscrewing the knob, insert the special key into the lock and turn it by 180°. By so doing the clamping element and the knob form a single body. When the lock is brought back to the starting position and the key is removed, the knob turns freely preventing the unscrewing.

FEATURES AND APPLICATIONS

The particular design of the internal device and of the flange helps the drainage of any dirt (dust, earth or liquid).

GN 5339.5

Stainless Steel-Triangular knobs

SPECIFICATION

Types

- Type **E**: with threaded blind bore
- Type **D**: with threaded through bore
- Type **C**: with plain blind bore H7

Stainless Steel precision casting

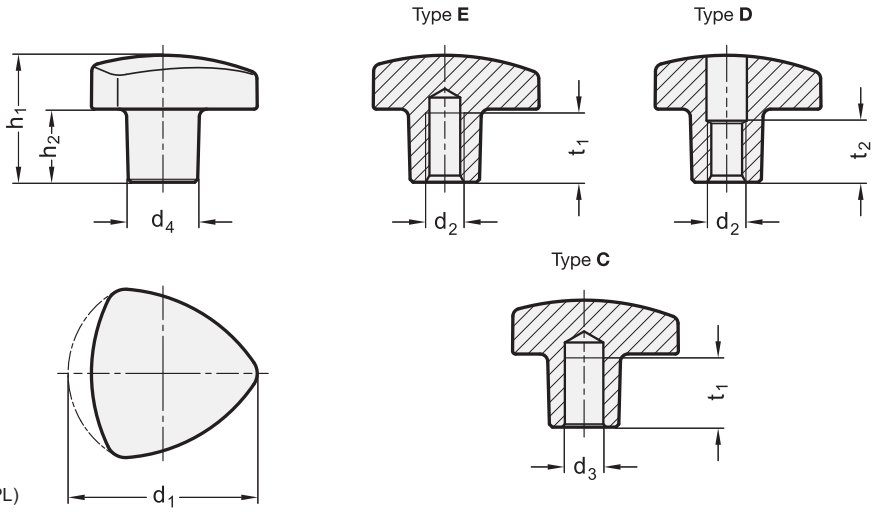
- AISI CF-8
- matt shot-blasted **MT**
- highly polished **PL** (only type D and E)

INFORMATION

Stainless Steel-Triangular knobs GN 5339.5 have been specially designed for use on machinery in the food industry.
The smooth and enclosed areas as well as the corner radii comply with the requirements of hygiene standards.
Original ELESA-Design, manufactured in metal version under permission of ELESA s.p.a.

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)



*Complete with surface index of the triangular knob (MT or PL)

Lobe knobs

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

CLOSING CAP
Polypropylene based (PP) technopolymer, orange or black colour, glossy finish with matte central surface, snap-in mounting.

STANDARD EXECUTIONS
- **VTL-B:** brass boss, threaded blind hole.
- **VTL-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947: ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
The long cone-shaped body of this knob is especially designed to clamp elements placed at a distance from the operator or in difficult to access places

SPECIAL EXECUTIONS ON REQUEST
On the surface of the closing cap words, marks, graphic symbols, etc... can be tampoprinted in colours.

Knobs with rear lobes

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

CAP
Technopolymer in Ergostyle colours, matte finish. Ultrasonically welded to the body of the knob.

STANDARD EXECUTIONS
- **ELK-A:** black-oxide steel boss, H9 reamed blind hole.
- **ELK-B:** brass boss, threaded blind hole.
- **ELK-FP:** black-oxide steel boss, H7 reamed pass-through hole.
- **ELK-p:** zinc-plated steel threaded stud with chamfered flat end as inUNI 947 : ISO 4753 (see Technical Data on page A11).

Lobe knobs

Duroplast

MATERIAL

Phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTIONS

- **VH.153-A:** black-oxide steel boss, plain blind hole.
- **VH.153-B:** brass boss, plain or threaded blind hole.
- **VH.153-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).

Fluted grip knobs

ESD conductive technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) special conductive technopolymer, black colour, matte finish. 10^3 Ω surface resistivity (ASTM D257 trial method), 10^3 Ωcm volume resistivity (ASTM D257 trial method).

STANDARD EXECUTIONS

- **BT-B:** brass boss, threaded blind hole.
- **BT-FP:** brass boss, threaded through hole.
- **BT-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS

The special conductive technopolymer (ESD-C Electrostatic Discharge Conductive) prevents the accumulation of electrostatic charge. BT-ESD knobs are suitable for ESD PROTECTED AREA (EPA) where components which are susceptible to electrostatic discharges are to be handled with the minimum risk of damage. The indelibly printed mark (ESD-C) on the surface of the knob identifies the particular conductive feature according to EN 100015/1 and IEC 61340-5-1.

Knurled grip knobs

Duroplast

MATERIAL

Phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTIONS

- **B.193-B:** brass boss, threaded blind hole.
- **B.193-SST:** AISI 303 stainless steel boss, threaded blind hole.
- **B.193-FP:** brass boss, threaded through hole.
- **B.193-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).
- **B.193-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).

Knurled grip knobs

Duroplast

MATERIAL
Phenolic based (PF) Duroplast.

COLOUR
- B.259: black, glossy finish.
- B.259-CLEAN: white similar to RAL 9002, glossy finish.

STANDARD EXECUTIONS
- **B.259-B:** brass boss, threaded blind hole.
- **B.259-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).
- **B.259-CLEAN**: AISI 303 stainless steel boss, threaded blind hole.

FEATURES AND APPLICATIONS (B.259-CLEAN)
B.259-CLEAN knob, thanks to its white colour and glossy finish, is particularly suitable for applications on medical and hospital equipment and on food processing machines whose parts, for hygienic reasons, must be frequently cleaned. Its solid shape without cavities prevents unhealthy residues from depositing.

DIN 6303

Knurled nuts

Steel / Stainless Steel

SPECIFICATION

Types

- Type **A**: without dowel hole
- Type **B**: with dowel hole (in Stainless Steel requires a minimum order quanitity)

Version in Steel

- Tensile strength class 5
- blackened

Version in Stainless Steel AISI 303 NI

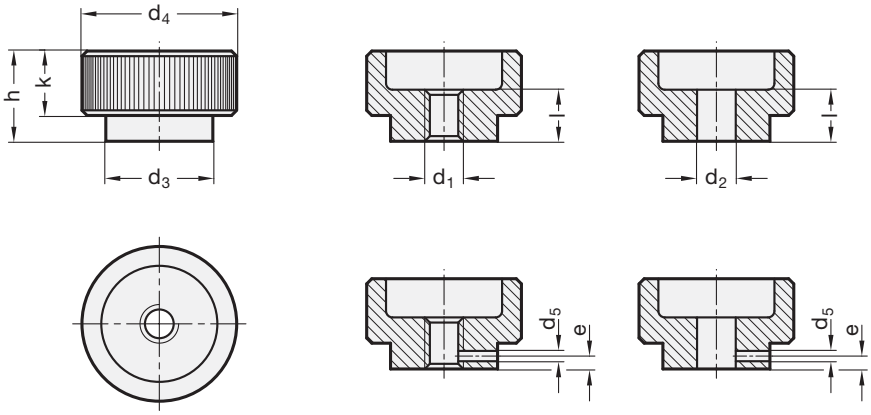
matt shot-blasted

INFORMATION

The dowel bore d_5 in the knurled nut DIN 6303 is designed for the use of clamping or notch pins.
Knurled nuts DIN 6303 with H7 bore and the size M12 are not provided on the official standard sheet.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)



*Complete with type index of the knurled nut (A or B)

A without dowel hole
B with dowel hole

GN 653.2

Knurled screws

Steel / Stainless Steel,
with recess cut for loss-prevention

SPECIFICATION

Version in Steel ST

- Tensile strength class 5
- visible face fine turned
- black oxide finish

Version in Stainless Steel AISI 303 NI

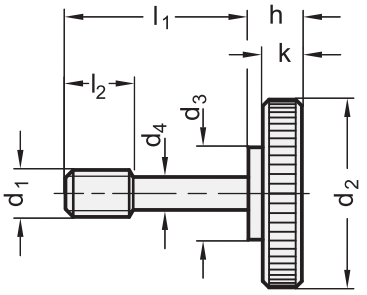
- AISI 303
- visible face fine turned
- matt shot-blasted

INFORMATION

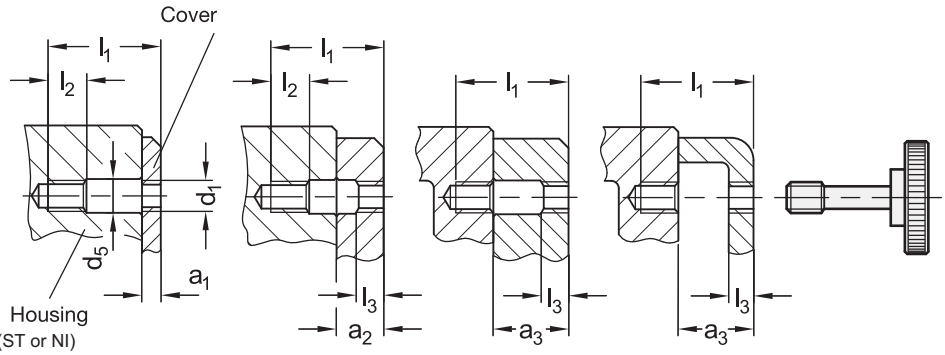
Knurled screws GN 653.2 can be used for to prevent loss of the thumb screw, due to the d_4 recessed portion of the stud.
When using, instead of a typical tapped and bore hole, it is necessary to provide tapped bores with a thread d_1 on each of the two elements to be assembled. Additionally, a clearance bore of d_5 on one or both sides must be cut.
Depending on the design and required clamping length a_1 ... a_3 of the component being attached, there are a number of assembly options as shown.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)



Assembly options



*Complete with material index of the knurled screw (ST or NI)

Flat knurled screws

Steel / Stainless Steel, with MS- / KU- pivot

SPECIFICATION

Version in Steel ST

- Tensile strength class 5
- visible face fine turned
- blackened

Version in Stainless Steel AISI 303 NI

- visible face fine turned
- matt shot-blasted

Pivot

Brass **MS**
Plastic (Polyacetal POM) **KU**

INFORMATION

Flat knurled screws GN 653.10 with pivots in brass or plastic are used in applications, where marks and damages on the workpiece are unacceptable.
The head dimensions comply with flat knurled screws DIN 653 (see page 271).

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

Fluted grip knobs

Technopolymer, assembly with screws

MATERIAL
Polyamide based (PA) technopolymer, black colour, matte finish.

CLOSING CAP
Polypropylene based (PP) technopolymer, orange or black colour, glossy finish with matte central surface, snap-in mounting.

STANDARD EXECUTION
Assembly by means of hexagon head screws or standard lock nuts (not supplied) to put in place inside the knob by pressing.

SPECIAL EXECUTIONS ON REQUEST
On the surface of the closing cap words, marks, graphic symbols, etc... can be tampoprinted in colours.

ASSEMBLY INSTRUCTIONS
1. The base of the knob should rest on a flat surface.
2. Insert the screw or the lock nut into the knob hole by means of a thrust tool.
3. Push until the insert is completely fitted in.
4. Assemble the snap-in closing cap.

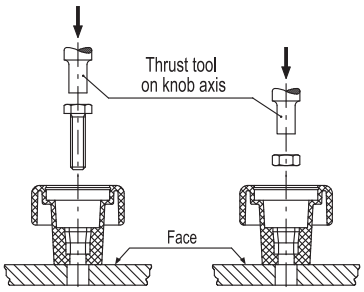
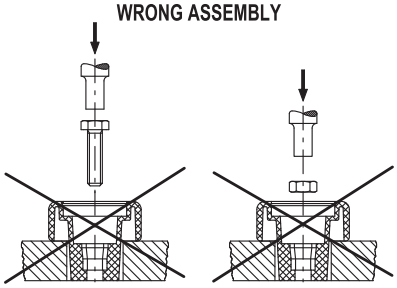
RIGHT ASSEMBLY



WRONG ASSEMBLY



Diamond cut knurled knobs

Technopolymer

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

COLOURED CENTRE CAP
Technopolymer, matte finish.
To order, add the index of the desired colour (C9, ..., C6) to the code and the description.
On request and for sufficient quantities, it can be supplied in other colours or with customised graphic symbols, marks or writings.

STANDARD EXECUTIONS
- **MBT-B**: brass boss, plain or threaded blind hole.
- **MBT-p**: zinc-plated steel threaded stud with chamfered flat end as in UNI 947 : ISO 4753 (see Technical Data on page A11).

ERGONOMY AND DESIGN
The particular knurling on the outside rim of the knob, provided with a structure of very fine pitch, allows a safe and comfortable grip, offering the operator the possibility of operating under the most different working conditions in a sensitive and ergonomic way and simplifying the adjustment of the knob during rapid rotation (or screwing) without any unpleasant angular work for the hand and wrist.

Fluted grip knobs

"Soft-touch" technopolymer

ELESA Original design

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

FLUTED RIM
"Soft-touch" thermoplastic elastomer (TPE) chemically bonded, hardness 70 Shore A. The coating material is certified according to FDA (U.S. Food and Drug administration).

STANDARD EXECUTIONS
- **MBT-B-SOFT:** brass boss, threaded and plain blind hole.
- **MBT-p-SOFT:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
The rim, coated with "soft-touch" elastomer, improves the grip even in the presence of oils, greases and sweat from the hand. For this reason these fluted knobs are suitable for fitness machines, tools and machines for gardening and goods transport, high-precision instruments and disability aids.

ERGONOMY AND DESIGN
This kind of knob allows operation in an ergonomic way in all working conditions, reaching the maximum torque level with little fatigue for the operator's hand.
The very fine pitch structure of the rim, together with the soft-touch cover, simplifies the adjustement of the knob during rapid rotation (or screwing) without any unpleasant angular work for the hand and wrist.

GN 7336.5

Knurled screws

Brass / Plastic / Spherical pivot

SPECIFICATION

Types

- Type **MS**: Brass pivot
- Type **KU**: Plastic pivot (Polyacetal POM)
- Type **ZK**: spherical pivot

Plastic
Technopolymer (Polyamide PA)

- glasfibre reinforced
- temperature resistant up to 130 °C
- black, matt

Threaded stud
Stainless Steel AISI 304

Cover cap plastic
light grey, matt

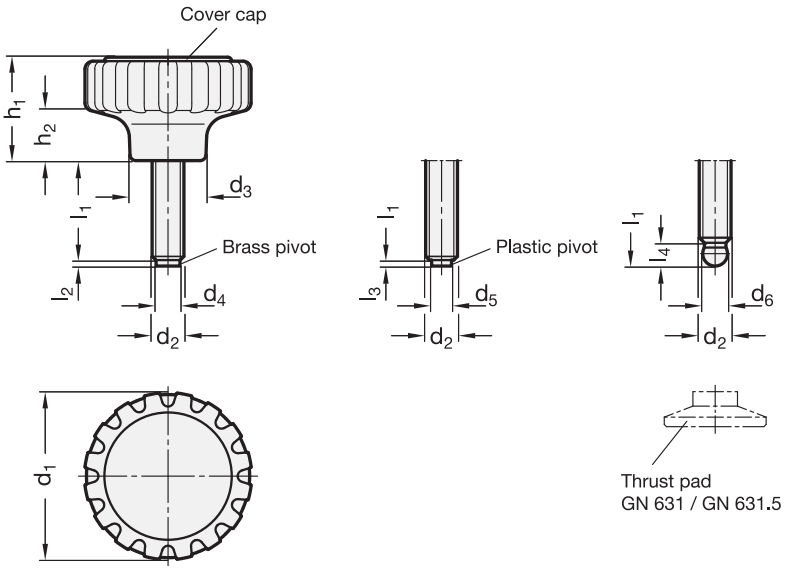
INFORMATION

Knurled screws GN 7336.5, type MS/KU with brass or plastic pivots are used when pressure dents or damage must be avoided.
Knurled screws GN 7336.5, type ZK feature a spherical pivot whose Ø d_6 is smaller than the core Ø of the thread. The version with spherical pivot is suitable for holding GN 631 (see page 940) / GN 631.5 (see page 941) thrust pads, which must be ordered separately.
The knurled screws GN 7336.5 distinguish an attractive design in combination with closed shape (no recess on the underside of the handles).

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Stainless Steel characteristics (see page A26)

Type **MS** Type **KU** Type **ZK**



*Complete with type index of the knurled screw (MS, KU or ZK)

MS	KU	ZK

GN 3663

Torque knurled knobs / Torque knurled knob screws

SPECIFICATION

Knob
Aluminium
black, anodized

Torque mechanism
Steel, hardened

Other parts
Steel, blackened

Cover cap
Plastic light grey

INFORMATION

Torque knurled knobs / Torque knurled knob screws GN 3663 are used when the manually applied torque is to be limited.
When turned clockwise, the torque mechanical system of the knurled knob triggers an „over-engagement" as soon as the specified torque is reached. When turning anti-clockwise, the mechanical system locks such that the torque is not limited. When tightening, this will ensure that the maximum permissible torque is not exceeded. On the other hand, the torque necessary for releasing will always be transferred reliably.
After removing the cover and loosening the countersunk screw, the thread or bore insert can be dismantled.

ON REQUEST

- Other dimensions for inserts with bore, thread and threaded stud inserts analog GN 300 (see page 320)
- Other dimenstions with special threaded studs analog GN 306 (see page 340)
- Other torques
- Torques limiting turning anti-clockwise or turning anti-clockwise and clockwise

Torque limiting wing knobs

Technopolymer

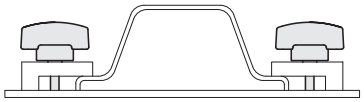
MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black (C9) or orange (C2) colour, matte finish.

TORQUE LIMITING MECHANISM
Nickel-plated steel.

STANDARD EXECUTIONS
- **CTD-B-2**: nickel-plated steel boss with threaded blind hole, maximum torque 2Nm.
- **CTD-B-3**: nickel-plated steel boss with threaded blind hole, maximum torque 3Nm.
- **CTD-p-2**: nickel-plated steel threaded screw, maximum torque 2Nm.
- **CTD-p-3**: nickel-plated steel threaded screw, maximum torque 3Nm.

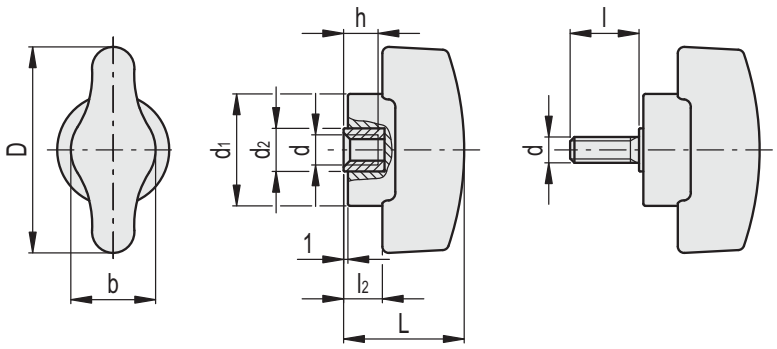
FEATURES AND APPLICATIONS
CTD wing knobs are used when the applied tightening torque must not exceed a preset value.
The torque transmission from the wing knob to the clamping element takes place by means of a spring system which prevents the overcoming of the established torque. Upon exceeding the established torque, a "click" sound will be heard to indicate that the maximum tightening has been reached. By turning the knob anticlockwise the mechanism unlocks.

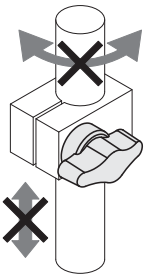
Application Examples



To prevent sheet deformation

CTD-B **CTD-p**





Fastening of the tube to avoid damage to tube surfaces

CTD-B

Wing knobs

Technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

CAP

Glass-fibre reinforced polyamide based (PA) technopolymer, in Ergostyle colours, matte finish, press-fit assembly.
Available also as accessory sold separately (see table ECA.).

Code	Description	Boss cap for
29752-*	ECA.W2-*	EWN.48
29753-*	ECA.W3-*	EWN.55
29755-*	ECA.W5-*	EWN.63
29754-*	ECA.W4-*	EWN.70

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS

- **EWN-FP:** brass boss, threaded pass-through hole, without cap.
- **EWN-SST-FP:** AISI 303 stainless steel boss, threaded pass-through hole without cap.
- **EWN-B**: brass boss, threaded pass-through hole, with cap.
- **EWN-SST**: AISI 303 stainless steel boss, threaded-pass hole, with cap.
- **EWN-p:** zinc-plated steel threaded stud with chamfered flat end as in UNI 947 : ISO 4753 (see Technical Data on page A11), with closing cap.
- **EWN-SST-p**: AISI 303 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical Data on page A11), with closing cap.

"Max limit Tightening torque" means the max torque value at which the metal insert, in normal conditions of use, is perfectly and strongly anchored to the plastic material.

EWN-SST-p-P

Wing knobs

Technopolymer, pad

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

CAP
Glass-fibre reinforced polyamide based (PA) technopolymer, in Ergostyle colours, matte finish, press-fit assembly.
Available also as accessory sold separately (see table ECA.).

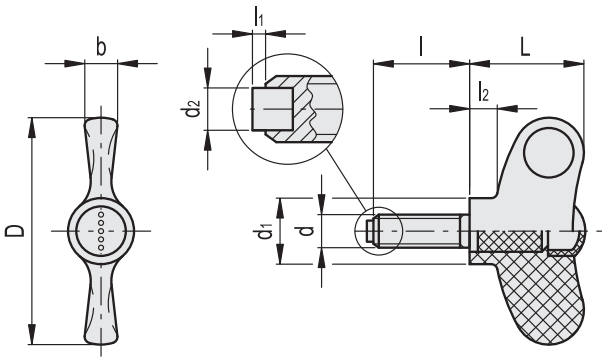
Code	Description	Cap for
29752-*	ECA.W2-*	EWN.48
29753-*	ECA.W3-*	EWN.55
29754-*	ECA.W4-*	EWN.70

* Complete with the colour index (C1, ..., C6)

STANDARD EXECUTIONS
- **EWN-SST-p-PO:** AISI 303 stainless steel threaded stud, acetal resin (POM) pad.
- **EWN-SST-p-PB:** AISI 303 stainless steel threaded stud, brass pad.

FEATURES AND APPLICATIONS
The chamfered end with bolt avoids to damage the surface of contact even in case of strong clamping.
Standard executions either with brass or acetal resin pad.

ERGONOMY AND DESIGN
The slightly concave marks on the wings help to position the fingers in order to apply the maximum force when tightening.



*Complete with colour index, example: 224556-C2 EWN.48-SST-p-M6x20-PO-C2

Wing knobs

Stainless steel

MATERIAL
AISI 304 stainless steel, sandblasted matte finish.

STANDARD EXECUTIONS
- **EWNM-SST:** threaded blind hole.
- **EWNM-SST-FP:** threaded pass-through hole.
- **EWNM-SST-p:** threaded pin.

FEATURES AND APPLICATIONS
These wing nuts allow high tightening torque values.

ERGONOMY AND DESIGN
The slightly concave marks on the wings help to position the fingers in order to apply the maximum force when tightening.
Different threadings.

STANDARD EXECUTIONS

- **CWN-B:** brass boss, threaded blind hole.
- **CWN-FP:** brass boss, threaded pass-through hole.
- **CWN-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

ERGONOMY AND DESIGN

The slightly convex marks on the wings offer a point where the fingers can be positioned.

Wing knobs

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
- **CT.476-B:** brass boss, threaded blind hole.
- **CT.476-FP:** brass boss, threaded pass-through hole.
- **CT.476-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).
- **CT.476-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS
These wing knobs allow high tightening torque values.

"Max limit Tightening torque" means the max torque value at which the metal insert, in normal conditions of use, is perfectly and strongly anchored to the plastic material.

Wing knobs

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
- **CTL.476-B:** brass boss, threaded blind hole.
- **CTL.476-FP**: brass boss, threaded through hole.
- **CTL.476-p:** zinc-plated steel threaded stud, chamfered flat end according to UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS
These wing knobs allow high tightening torque values and a confortable grip, thanks to the elongated hub.

DESIGNED
FOR ENGINEERING

3 Clamping levers

Adjustable handles

Lever handles

Adjustable handles

Technopolymer

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

PUSH BUTTON
Technopolymer in Ergostyle colours, glossy finish.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
- **ERX -B:** brass boss, threaded blind hole.
- **ERX-SST:** AISI 303 stainless steel boss, threaded blind hole.
- **ERX-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).
- **ERX-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
Particularly suitable when the lever turning angle is limited owing to lack of space.
Compared to other types of adjustable handles with metal retaining screw this solution offers:
- absolute electric insulation for the operator
- no visible steel parts subject to rust
- more comfortable lever release.

STRESS RESISTANCE
Adjustable handles are generally used for repetitive clamping operations sometimes with very high-frequency.
Therefore, the stress resistance (i.e. the resistance to repeated tightening cycles) of the handle unit is particularly important and, especially, the strength of the toothed element which transmits the tightening force from the handle to the threaded element (boss or stud).
In fact, the results of several laboratory tests, perfomed with a special instrument that simulates the most severe use conditions, have shown that e.g. ERX.78 adjustable handle can withstand without yielding more than 100,000 tightening cycles, under the action of a force of 490 N (see graphic).
The special glass-fibre reinforced technopolymer enables the ELESA adjustable handles to guarantee stress resistance values which are much higher than the ones generated under normal working conditions.

OTHER EXECUTIONS AVAILABLE
Lever body in orange (C2) with black push button (C1).
Example: code 233061-C2-C1 description ERX.30-C2-B-M3-C1.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

Adjustable handles

Technopolymer chrome-plated

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, chrome-plated, semi-glossy finish.

PUSH BUTTON
Black technopolymer, glossy finish.

STANDARD EXECUTION
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring. Brass boss, tapped blind hole.

FEATURES AND APPLICATIONS
Particularly suitable when the lever turning angle is limited owing to lack of space.
Compared to other types of adjustable handles with metal retaining screw this solution offers:
- no visible steel parts subject to rust
- more comfortable lever release.

CHEMICAL AGENTS RESISTANCE
The chrome-plated surface is resistant to wear, scrapes and shocks. In laboratory tests carried out at ambient temperature (23°C), the chrome-plated surface revealed to be resistant to: sea water, detergents, acetone, ethyl alcohol, formic acid, chlorine solutions.

SPECIAL EXECUTIONS ON REQUEST
Bosses with different threadings.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

Adjustable handles

Quick assembly, technopolymer

ERGOSTYLE®

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

PUSH BUTTON
Technopolymer, RAL 2004 orange colour, glossy finish. On request and for sufficient quantities it can be supplied in one of the other Ergostyle colours.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
For quick assembly (ELESA patent) six-lobe socket ISO 10664 to fit TORX® T15 tool (registered trademark of TEXTRON INC.).
- **ERX-AV-B:** brass boss, threaded blind hole.
- **ERX-AV-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
Even if it has a plastic push button, ERX-AV adjustable handle offers the possibility of a quick initial screwing during assembly by means of electric or pneumatic screwdrivers with controlled tightening torque system.

STRESS RESISTANCE
See ERX. (on page 304).

SPECIAL EXECUTIONS ON REQUEST
Lever body in orange colour.
Bosses and studs with different threadings.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

Safety adjustable handles

Push action, technopolymer

LEVER BODY

Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish. Red writing with "PUSH" tampoprinted on the lever body (avoid contact with solvents, alcohol or detergents containing alcohol).

STANDARD EXECUTIONS

Glass-fibre reinforced technopolymer clamping element, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.

- **ERS-A:** black-oxide steel boss, threaded blind hole.
- **ERS-B:** brass boss, threaded blind hole.
- **ERS-p:** black-oxide steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).

STRESS RESISTANCE

See ERX. (on page 304).

INSTRUCTIONS OF USE

For clamping, push the lever to engage the clamping device toothing and turn it. By releasing the lever, the return spring automatically disengages the toothing and the lever returns to its rest position.
In case of accidental shocks, the lever turns freely without affecting the clamping action enabling the operator to manoeuvre in safety.

Adjustable handles

Technopolymer, steel or stainless steel clamping element

LEVER BODY

Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish. Built-in zinc alloy toothed insert for coupling to the metal clamping element.

STANDARD EXECUTIONS

- **ERZ-A:** black-oxide steel clamping element with threaded hole and retaining screw. AISI 302 stainless steel return spring.
- **ERZ-SST:** AISI 303 stainless steel clamping element with threaded hole and retaining screw. AISI 302 stainless steel return spring.
- **ERZ-p:** black-oxide steel clamping element with threaded stud and retaining screw. AISI 302 stainless s teel return spring.
- **ERZ-SST-p:** AISI 303 stainless steel clamping element with threaded stud and retaining screw. AISI 302 stainless steel return spring.

Retaining screw with six-lobed socket to fit TORX®.

FEATURES AND APPLICATIONS

Particularly suitable when the lever turning angle is limited owing to lack of space.
The metal teeth of the built-in zinc alloy insert allow the assembly of clamping elements completely made out of metal, which can be easily modified by machining in case of special assembly requirements.

SPECIAL EXECUTIONS ON REQUEST

Lever body in orange colour.

INSTRUCTIONS OF USE

For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.
If the lever cannot make a 360° rotation, the clamping element can be easily screwed by means of the six-lobed socket front head screw (after having disengaged the lever).

Adjustable handles

Zinc alloy, steel or stainless steel clamping element

LEVER BODY
Die cast zinc alloy, epoxy resin coating, orange, red, grey, black colours, matte finish.

STANDARD EXECUTIONS
- **ERM-A:** black-oxide steel clamping element with threaded hole and retaining screw. Steel return spring.
- **ERM-SST:** AISI 303 stainless steel clamping element with threaded hole and retaining screw. AISI 301 stainless steel return spring.
- **ERM-p:** black-oxide steel clamping element with threaded stud and retaining screw. Steel return spring.
- **ERM-SST-p:** AISI 303 stainless steel clamping element with threaded stud and retaining screw. AISI 301 stainless steel return spring.

Retaining screw with six-lobed socket to fit TORX®.

FEATURES AND APPLICATIONS
Particularly suitable when the lever turning angle is limited owing to lack of space.

SPECIAL EXECUTIONS ON REQUEST
- Lever body in different colours.
- Chrome-plated lever.
- Clamping element with plain hole.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.
If the lever cannot make a 360° rotation, the clamping element can be easily screwed by means of the six-lobed socket front head screw (after having disengaged the lever).

Adjustable hand levers

Zinc die casting, Bushing / Threaded bolt Steel

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
black, RAL 9011, silk finish **SZ**
orange, RAL 2004, textured finish **OS**
red, RAL 3000, textured finish **RS**
silver, RAL 9006, textured finish **SR**

chrome-plated **CR**

uncoated, slide grinded **RH**

Version with threaded insert

Threaded insert and retaining screw
Steel, blackened

Version with threaded stud

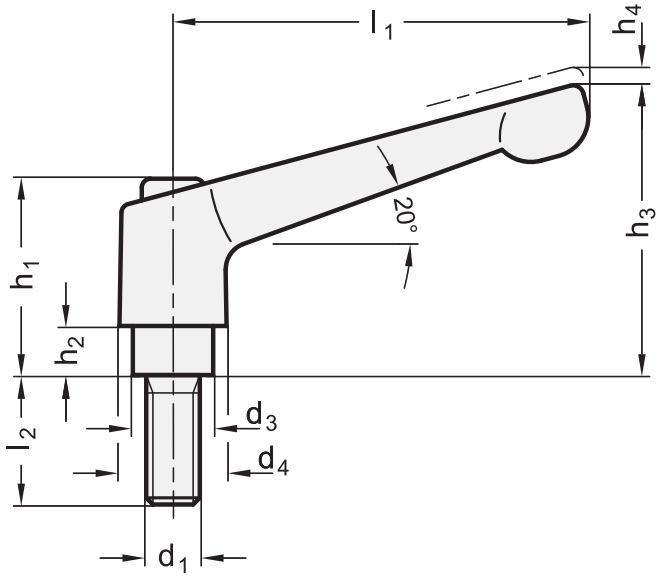
Threaded stud and retaining screw
Steel, blackened

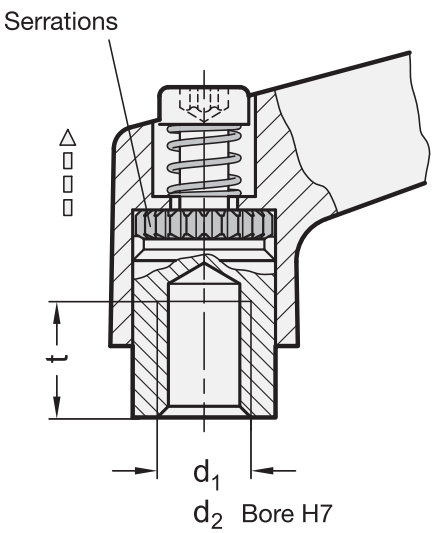
INFORMATION

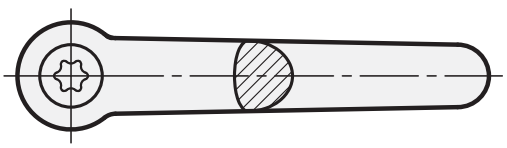
Adjustable hand levers GN 300 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)







GN 300

Adjustable hand levers

* Complete with colour index of the clamping lever body (SW, SZ, OS, RS, SR, CR or RH)

Adjustable hand levers

Zinc die casting, Bushing / Threaded bolt
Stainless Steel

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
black, RAL 9011, silk finish **SZ**
orange, RAL 2004, textured finish **OS**
red, RAL 3000, textured finish **RS**
silver, RAL 9006, textured finish **SR**

chrome-plated **CR**

uncoated, slide grinded **RH**

Version with threaded insert

Threaded insert and retaining screw
Stainless Steel AISI 303

Version with threaded stud

Threaded stud and retaining screw
Stainless Steel AISI 303

INFORMATION

Adjustable hand levers GN 300.1 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

Stainless Steel AISI 303

Retaining screw
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

INFORMATION

Adjustable hand levers GN 300.5 with full Stainless Steel-Handle, correspond to applications where „agressive" surrounding conditions are given, or where stainless steel materials are prescribed such as in food processing or chemical industry.
Retaining screws with hexagon head (Type AS) comply with the requirement "prevents water from accumulating".
Adjustable hand levers have proved to be ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

Adjustable Stainless Steel-Hand levers

electropolished

SPECIFICATION

Types

- Type **AS**: with external hexagon
- Type **IS**: with internal hexalobular

Handle
Stainless Steel
Precision casting

- Stainless Steel AISI CF-8
- electropolished

Version with threaded insert

Threaded bush
Stainless Steel AISI 303

Retaining screw
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

Version with threaded stud

Threaded stud
Stainless Steel AISI 303

Retaining screw
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

INFORMATION

Adjustable hand levers GN 300.6 with full Stainless Steel-Handle, correspond to applications where „agressive" surrounding conditions are given, or where stainless steel materials are prescribed such as in food processing or chemical industry.
Retaining screws with hexagon head (Type AS) comply with the requirement "prevents water from accumulating".
Adjustable hand levers have proved to be ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

Weight type AS

GN 300.4

Adjustable hand levers

Zinc die casting / with increased clamping force

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
black, RAL 9011, silk finish **SZ**
orange, RAL 2004, textured finish **OS**
red, RAL 3000, textured finish **RS**
silver, RAL 9006, textured finish **SR**

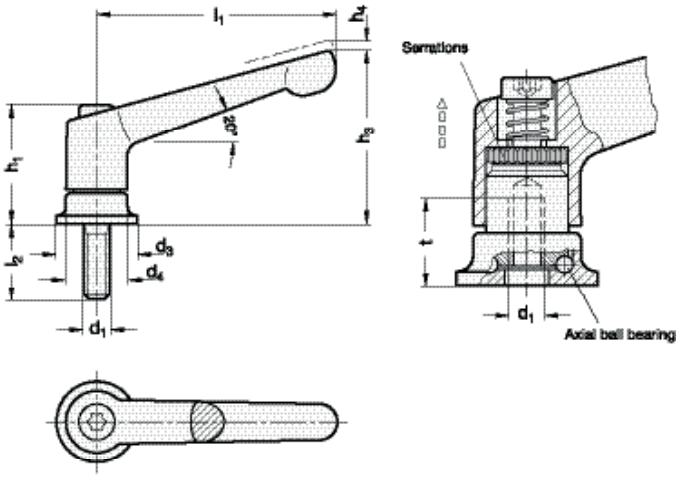
chrome-plated **CR**

Version with threaded insert
Steel, tensile strength class 5.8
nitrided, blackened

Retaining screw
Steel, blackend

Version with threaded stud
Steel, tensile strength class 5.8
nitrided, blackened

Retaining screw
Steel, blackened



INFORMATION

Adjustable hand levers GN 300.4 are produced with a clamping area which is linked via a thrust ball bearing to the bush and screw respectively of the clamping lever. This has led to the following advantages:
- **Doubled** clamping force through vastly reduced friction.
- There is no movement on the contact area between adjustable hand lever and component which greatly reduces any marking on the clamping area
- In addition a reduced creep factor has been achieved by the increased preload.

* Complete with colour index of the clamping lever body (SW, SZ, OS, RS, SR or CR)

Pin for releasing button
Stainless Steel

Version with threaded insert

Steel, blackened

Version with threaded stud

Steel, blackened

ON REQUEST

Adjustable hand levers GN 303 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be dis-engaged.
The releasing button is a design element that offers an easy disengagement. Its use is limited to applications where dismantling of the lever for installation is not required.

ON REQUEST

- Handle in colours of GN 300 (see page 320)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

black, RAL 9005 **S**
orange, RAL 2004 **O**
grey, RAL 7035 **G**

Pin for releasing button
Stainless Steel

Version with threaded insert

Stainless Steel AISI 303

Version with threaded stud

Stainless Steel AISI 303

INFORMATION

Adjustable hand levers GN 303.1 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be dis-engaged.
The releasing button is a design element that offers an easy disengagement. Its use is limited to applications where dismantling of the lever for installation is not required.

ON REQUEST

- Handle in colours of GN 300 (see page 320)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

Adjustable hand levers

with special tipped threaded studs

SPECIFICATION

Types

- Type **MS**: Brass tipp
- Type **KU**: Plastic tipp
- Type **DZ**: Hardened oval tipp
- Type **ZK**: Spherical end
- Type **KD**: Spherical end with swivel thrust pad

Handle

Zinc die casting

Plastic coated
black, RAL 9005, textured finish **SW**
orange, RAL 2004, textured finish **OS**
red, RAL 3000, textured finsih **RS**
silver, RAL 9006, textured finish **SR**

Threaded stud and retaining screw
Steel, blackened

Thrust point

- Type MS: Brass
- Type KU: Plastic (POM)
- Type DZ: Steel, hardened (Oval point)

Thrust pad
Plastic (Polyacetal POM)

- temperature resistant up to 80 °C
- black, matt

INFORMATION

Adjustable hand levers GN 306 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever disengages the serrations, allowing it to be swivelled to the ideal clamping position. When the lever is released, the serrations
The brass and plastic tipped studs (Types MS / KU) help to avoid damage to the work piece being clamped.
The hardened tipped stud (Type DZ) provides an oval point-shaped pressure point.
The swivel thrust pad (Type KD) can easily be snapped on and taken off.
Pad is supplied unmounted.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

ON REQUEST

- with threaded stud in Stainless Steel
- Flat handle GN 302 (see page 360)

Adjustable handles

Technopolymer

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

PUSH BUTTON
Technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
- **MRX-B:** brass boss, threaded blind hole.
- **MRX-SST:** AISI 303 stainless steel boss, threaded blind hole.
- **MRX-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).
- **MRX-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
Particularly suitable when the lever turning angle is limited owing to lack of space. Compared to other types of adjustable handles with metal retaining screw this solution offers:
- absolute electric insulation for the operator
- more comfortable lever release.

STRESS RESISTANCE
See ERX. (on page 304).

OTHER EXECUTIONS AVAILABLE
Lever body in orange (C2) with black push button (C1).
Example: code 141131-C2-C1 description MRX.40-C2-B-M5-C1.

SPECIAL EXECUTIONS ON REQUEST
Lever body in RAL 7031 grey.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

ELESA Original design

Adjustable handles

Technopolymer

LEVER BODY

Glass-fibre reinforced polyamide based (PA) technopolymer, black, orange, grey colours, matte finish.

STANDARD EXECUTIONS

Glass-fibre reinforced technopolymer clamping element, black colour, with knurling on the protruding part to make initial tightening easier.

- **MR-A**: black-oxide steel boss, plain or threaded blind hole. Black-oxide steel retaining screw, AISI 302 stainless steel return spring.
- **MR-B**: brass boss, threaded blind hole. Brass retaining screw, AISI 302 stainless steel return spring.
- **MR-p**: black-oxide steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11). Black-oxide steel retaining screw, AISI 302 stainless steel return spring.

STRESS RESISTANCE

See ERX. (on page 304).

Adjustable hand levers

Zinc die casting, Bushing / Threaded bolt Steel

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
orange, RAL 2004, textured finish **OS**

Version with internal thread

Threaded bush and retaining screw
Steel (5.8), blackened

Version with threaded stud

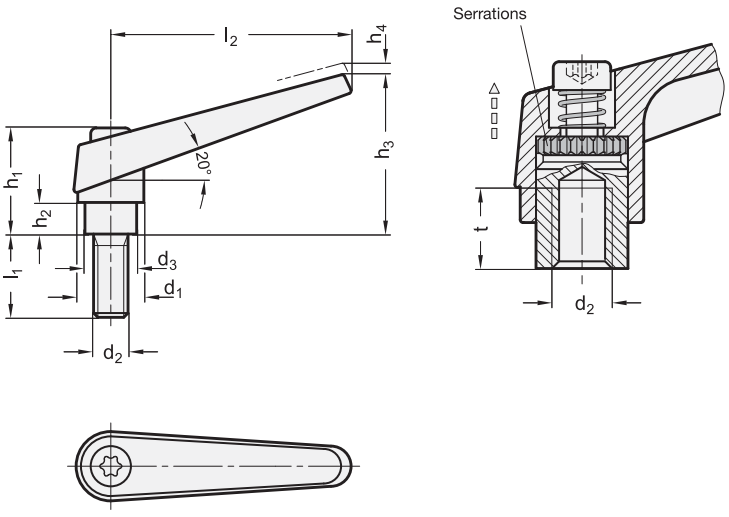
Threaded stud and retaining screw
Steel (5.8), blackened

INFORMATION

Adjustable hand levers GN 101 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever disengages serrations and allowing to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

ON REQUEST

- with insert in Stainless Steel



* Complete with colour index of the clamping lever body (SW or OS)

SW RAL9005 OS RAL2004

Adjustable hand levers

Zinc die casting, Bushing / Threaded bolt
Stainless Steel

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
orange, RAL 2004, textured finish **OS**

Version with internal thread

Threaded bush and retaining screw
Stainless Steel AISI 303

Version with threaded stud

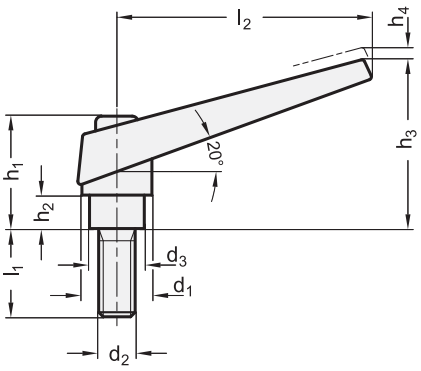
Threaded stud and retaining screw
Stainless Steel AISI 303

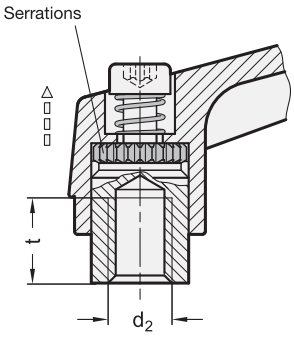
INFORMATION

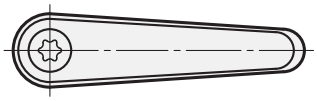
Adjustable hand levers GN 101.1 are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged.
Pulling the lever disengages serrations and allowing to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)







* Complete with colour index of the clamping lever body (SW or OS)

Adjustable handles

Technopolymer

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

PUSH BUTTON
Technopolymer in grey-black or orange colours, glossy finish.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
- **MRT-B:** brass boss, threaded blind hole.
- **MRT-SST:** AISI 303 stainless steel boss, threaded blind hole.
- **MRT-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).
- **MRT-SST-p:** AISI 303 stainless steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
Flat adjustable handle, open configuration to avoid any deposit of unhygienic residues or scraps and dirt.
Particularly suitable when the lever turning angle is limited owing to lack of space.
Compared to other types of adjustable handles with metal retaining screw this solution offers:
- absolute electric insulation for the operator
- no visible steel parts subject to rust
- more comfortable lever release.

STRESS RESISTANCE
See ERX. (on page 304).

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

Adjustable handles

Flat lever, technopolymer

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

PUSH BUTTON
Technopolymer in Ergostyle colours, glossy finish.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
- **ERW-B**: brass boss, threaded blind hole.
- **ERW-SST**: AISI 303 stainless steel boss, threaded blind hole.
- **ERW-p**: zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical data on page A11).
- **ERW-SST-p**: AISI 303 stainless steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS
Particularly suitable when the available space and operating mode make it preferable to use a flat lever instead of an inclined lever.
Compared to other types of adjustable handles with metal retaining screw this solution offers some advantages:
- absolute electric insulation for the operator
- no visible steel parts subject to rust
- more comfortable lever release.

STRESS RESISTANCE
Adjustable handles are generally used for repetitive clamping operations sometimes with very high-frequency.
Therefore, the stress resistance (i.e. the resistance to repeated tightening cycles) of the handle unit is particularly important and, especially, the strength of the toothed element which transmits the tightening force from the handle to the threaded element (boss or stud).
The results of several laboratory tests, perfomed with a special instrument that simulates the stress resistance conditions, have shown that e.g. ERW.78 adjustable handle can withstand without yielding more than 100,000 tightening cycles, under the action of a force of 490 N (see graphic).
The special glass-fibre reinforced technopolymer enables the ELESA adjustable handles to guarantee stress resistance values which are much higher than the ones generated under normal working conditions.

INSTRUCTIONS OF USE
For clamping, lift the lever to disengage the clamping device teeth and bring it back to start position. By releasing the lever, the return spring automatically engages the teeth.

Adjustable hand levers

Zinc die casting, Bushing /Threaded bolt Steel

SPECIFICATION

Handle
Zinc die casting

plastic coated
black, RAL 9005, textured finish **SW**
orange, RAL 2004, textured finish **OS**
red, RAL 3000, textured finish **RS**
silver, RAL 9006, textured finish **SR**

Version with threaded insert

Threaded bush and retaining screw
Steel, blackened

Version with threaded stud

Threaded stud and retaining screw
Steel (5.8), blackened

INFORMATION

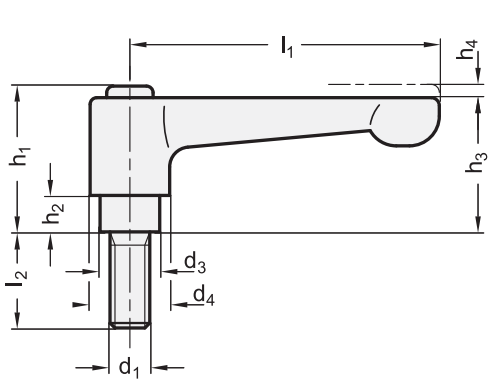
Adjustable hand levers GN 302 have a straight lever, not inclined, being parallel to the clamping space.
Adjustable hand levers are ideal whenever parts have to be clamped in a confined space or in a particular lever position. The centre insert is connected to the lever via serrations which can easily be disengaged
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever the serrations automatically re-engage.

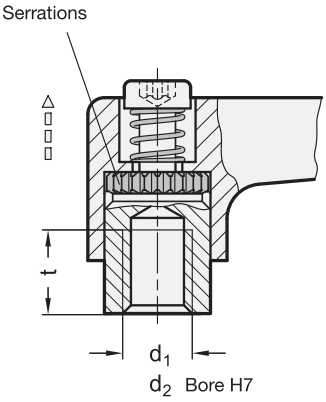
TECHNICAL INFORMATION

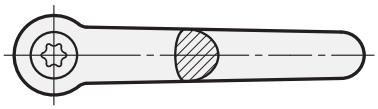
- ISO-Fundamental Tolerances (see page A21)

ON REQUEST

- with insert in Stainless Steel
- with push-button







GN 302 | Adjustable hand levers

* Complete with colour index of the clamping lever body (SW, OS, RS or SR)

GN 212.3

Adjustable tension levers

Steel, blackened

SPECIFICATION

Types

- Type **E**: angled lever
- Type **D**: straight lever

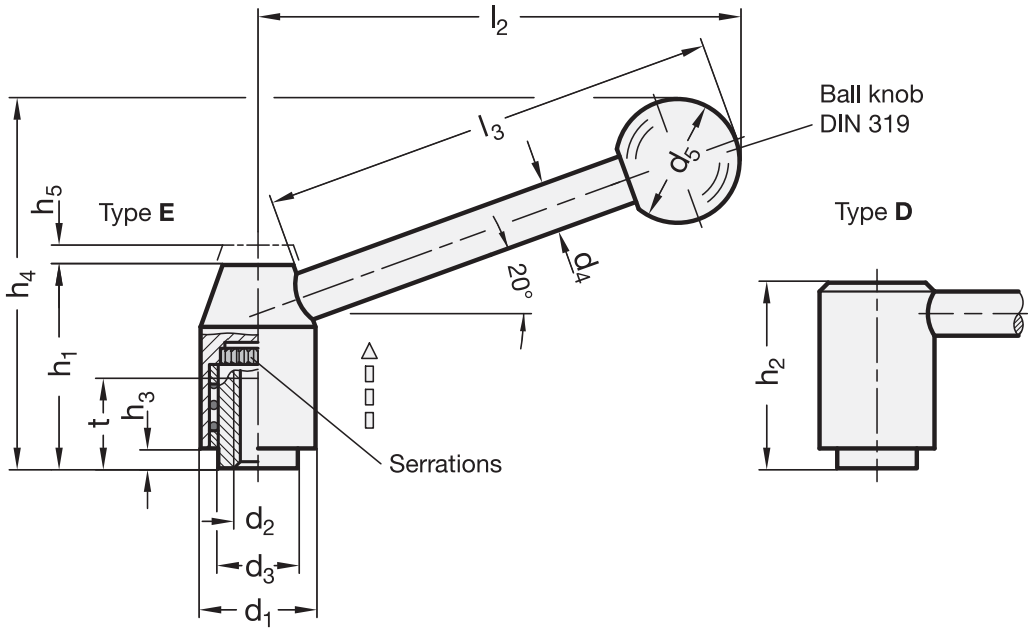
Steel
blackened

Tensile strength class 5.8

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

Adjustable tension levers GN 212.3 have proved to be ideal whenever parts have to be clamped in a confined space or a particular lever position is required. The threaded insert is connected with the hub via serrations which can be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever it will automatically re-engage.



*Complete with type of the Adjustable tension levers (E or D)

E Angled lever **D** Straight lever

Weight type E

Adjustable Stainless Steel-Tension levers

SPECIFICATION

Type
- Type **E**: angled lever

Stainless Steel AISI 303
Hub and shaft matt shot-blasted

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

Adjustable tension levers GN 212.5 have proved to be ideal whenever parts have to be clamped in a confined space or a particular lever position is required. The threaded insert is connected with the hub via serrations which can be disengaged.
Pulling the lever, disengages the serrations and allowing it to be swivelled to the ideal clamping position. On releasing the lever it will automatically re-engage.

ON REQUEST
- straight lever (90°)

Adjustable clamping levers

PUSH to disengage

SPECIFICATION

Types

- Type **M**: Straigth lever
- Type **N**: Angled lever

Steel
blackened

Tensile strength class 5.8

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

Adjustable clamping levers GN 6337.3 have proved to be ideal whenever parts have to be clamped in a confined space or a particular lever position is required. The insert is connected by the lever via serrations in the ball bore which can be disengaged.
Pushing the lever down, disengages the serrations and the lever can be swivelled to the ideal clamping position. Engagement is achieved by releasing the lever.
Should a rotation of 360° not be possible, the insert can be lightly screwed in (after the lever is disengaged) via a slot in the knurled screw.

Adjustable Flat tension levers

Steel, blackened

SPECIFICATION

Types

- Type **D**: straight lever
- Type **E**: angled lever

Steel
blackened

Tensile strength class 5.8

Plane surface with natural coloured, anodized Aluminium-disc

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

The overall height of tension levers GN 125 is reduced to a minimum. As all other adjustable levers, they are ideal whenever parts have to be clamped in a confined space, or a particular lever position is required. The threaded insert is connected with the hub via serrations which can be disengaged.
Pulling the lever, disengages the serrations and the lever can be swivelled to the ideal clamping position. On releasing the lever it will automatically re-engage.

ON REQUEST

- with threaded through hole

Weight type E

Adjustable Stainless Steel-Flat tension levers

SPECIFICATION

Types

- Type **D**: straight lever
- Type **E**: angled lever

Stainless Steel AISI 303
matt shot-blasted

Plane surface with natural coloured, anodized Aluminium-disc

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

The overall height of Stainless Steel-tension levers GN 125.5 is reduced to a minimum.
As all other adjustable levers, they are ideal whenever parts have to be clamped in a confined space, or a particular lever position is required.
The threaded insert is connected with the hub via serrations which can be disengaged
Pulling the lever, disengages the serrations and the lever can be swivelled to the ideal clamping position. On releasing the lever it will automatically re-engage.

ON REQUEST

- with threaded through hole

Weight type E

Safety tension levers

PUSH to engange

SPECIFICATION

Types

- Type **E**: angled lever
- Type **D**: straight lever

Steel
blackened

Tensile strength class 5.8

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

Safety tension levers GN 312 are used on such applications where a thoughtless or mistaken releasing or re-positioning of the tension lever could lead to an accident.
The lever in its rest position is not connected with the internal spindle and can be rotated unhindered.
The tension lever engages in the serration only after pushing it down, thus allowing clamping or unclamping.
The "freewheel" position is re-established as soon as the handle is released.

Axis, lag nut, setting nut
Steel zinc plated, blue passivated

Version with threaded stud

Axis, lag screw, setting screw
Steel zinc plated, blue passivated

INFORMATION

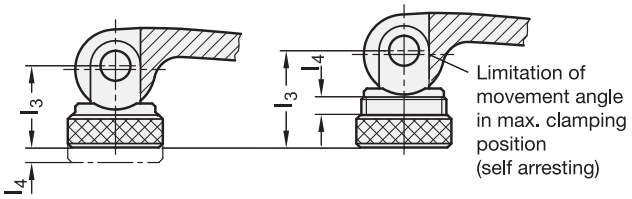
Clamping levers with eccentrical cam GN 927 are used for rapid clamping and releasing. Hereby, contrary to a clamping operation via a thread, these levers permit a **torque-free** clamping.
The lever has been designed to ensure that its movement cannot exceed the max. clamping force.
There are no loose components since they are all assembled and mounted in their correct order.
Type A has the following benefits:
The distance between the lever cam and the clamping surface is adjustable via a fine pitch thread, allowing the clamping position to be set easily with maximum clamping force. Also, the position of the lever relative to the clamping axis can be determined.
With these clamping levers with eccentrical cam, clamping forces of up to 8 kN can be reached.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

CONSCTRUCTIONAL FEATURES (TYPE A) / APPLICATION EXAMPLE

l_3 adjustable by the setting screw for optimum clamping force at the preferred lever position.



l_3 max. must not be exeeded. Otherwise there is the risk that the positioning thread can no longer absorb the clamping force or may be damaged.

Clamping levers with eccentrical cam

Single parts Stainless Steel / Contact plate Plastic / Lever Zinc die casting

SPECIFICATION

Types

- Type **A**: Plastic contact plate with setting nut
- Type **B**: Plastic contact plate without setting nut

Lever
Zinc die casting

plastic coated (abrasion proof epoxy resin)
black, RAL 9005 **B**
orange, RAL 2004 **O**
red, RAL 3000 **R**
silver, RAL 9006 **S**

Contact plates
Plastic, glass fibre reinforced

- Type A: Polyacetal (POM)
- Type B: Polyamide (PA)

Version with threaded insert

Axis, lag nut, setting nut
Stainless Steel AISI 303

Version with threaded stud

Axis, lag screw, setting screw
Stainless Steel AISI 303

INFORMATION

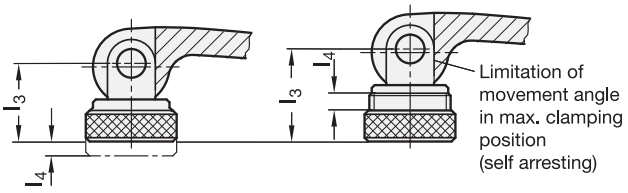
Clamping levers with eccentrical cam GN 927.4 with stainless steel internal thread are used for rapid clamping and releasing. Hereby, contrary to a clamping operation via a thread, these levers permit a **torque-free** clamping.
The lever has been designed to ensure that its movement cannot exceed the max. clamping force.
There are no loose components since they are all assembled and mounted in their correct order.
Type A has the following benefits:
The distance between the lever cam and the clamping surface is adjustable via a fine pitch thread, allowing the clamping position to be set easily with maximum clamping force. Also, the position of the lever relative to the clamping axis can be determined.
With these clamping levers with eccentrical cam, clamping forces of up to 8 kN can be reached.

TECHNICAL INFORMATION

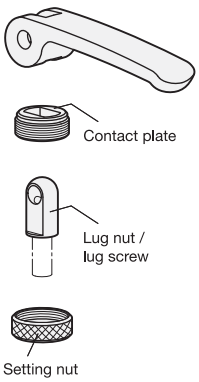
- Plastic characteristics (see page A2)
- Stainless Steel characteristics (see page A26)

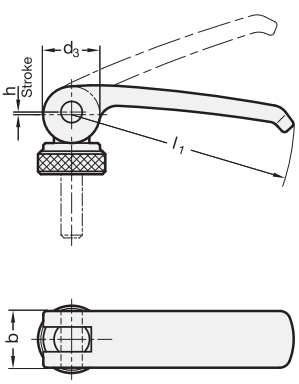
CONSTRUCTIONAL FEATURES (TYPE A) / APPLICATION EXAMPLE

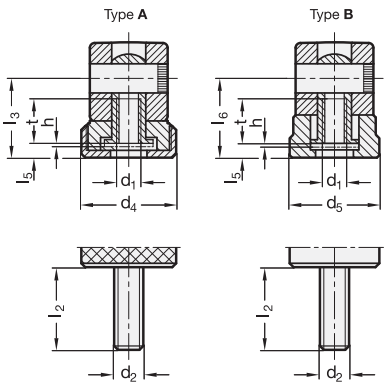
l_3 adjustable by the setting screw for optimum clamping force at the preferred lever position.



l_3 max. must not be exeeded. Otherwise there is the risk that the positioning thread can no longer absorb the clamping force or may be damaged.







GN 927.4 | Clamping levers with eccentrical cam

Clamping levers with eccentrical cam

Contact plate Plastic, Lever Steel

SPECIFICATION

Types

- Type **A**: Plastic contact plate with setting nut
- Type **B**: Plastic contact plate without setting nut

Lever
Steel (precision casting)
zinc plated, blue passivated

Contact plates
Plastic, glass fibre reinforced

- Type A: Polyacetal (POM)
- Type B: Polyamide (PA)

Version with threaded insert

Axis, lag nut, setting nut
Steel zinc plated, blue passivated

Version with threaded stud

Axis, lag screw, setting screw
Steel zinc plated, blue passivated

INFORMATION

Clamping levers with eccentrical cam GN 927.3 are used for rapid clamping and releasing. Hereby, contrary to a clamping operation via a thread, these levers permit a **torque-free** clamping.
The lever has been designed to ensure that its movement cannot exceed the max. clamping force.
There are no loose components since they are all assembled and mounted in their correct order.
Type A has the following benefits:
The distance between the lever cam and the clamping surface is adjustable via a fine pitch thread, allowing the clamping position to be set easily with maximum clamping force. Also, the position of the lever relative to the clamping axis can be determined.
With these clamping levers with eccentrical cam, clamping forces of up to 8 kN can be reached.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

Weight type A

Stainless Steel-Clamping levers with eccentrical cam

Contact plate, Stainless Steel

SPECIFICATION

Types

- Type **A**: Stainless Steel contact plate with setting nut
- Type **B**: Stainless Steel contact plate without setting nut

Lever
Stainless Steel AISI CF-8

Contact plates
Stainless Steel AISI 431
hardened

Version with threaded insert

Axis, lag nut, setting nut
Stainless Steel AISI 303

Version with threaded stud

Axis, lag screw, setting screw
Stainless Steel AISI 303

INFORMATION

Stainless Steel-Clamping levers with eccentrical cam GN 927.7 are used for rapid clamping and releasing. Hereby, contrary to a clamping operation via a thread, these levers permit a **torque-free** clamping.
The lever has been designed to ensure that its movement cannot exceed the max. clamping force.
There are no loose components since they are all assembled and mounted in their correct order.
Type A has the following benefits:
The distance between the lever cam and the clamping surface is adjustable via a fine pitch thread, allowing the clamping position to be set easily with maximum clamping force. Also, the position of the lever relative to the clamping axis can be determined.
With these clamping levers with eccentrical cam, clamping forces of up to 8 kN can be reached.

ON REQUEST

- Clamping surface free of grease

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

Weight type A

Cam levers

Technopolymer

ELESA Original design

CAM LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

ROTATING PIN
Glossy zinc-plated steel or AISI 303 stainless steel, with threaded hole or threaded stud.

CONNECTION AND RETENTION ELEMENT BETWEEN THE LEVER AND THE CAM SLIDING BASE
Polyamide based technopolymer (PA), black colour.

CAM SLIDING BASE
Polyamide-based SUPER-technopolymer (PA), black colour.

ADJUSTABLE KNURLED RING-NUT
Polyamide-based SUPER-technopolymer (PA), black colour.

STANDARD EXECUTIONS
- **LAC-B**: positioning without adjustable ring-nut, rotating pin with zinc-plated steel threaded hole.
- **LAC-SST**: positioning without adjustable ring-nut, rotating pin with AISI 303 stainless steel threaded hole.
- **LAC-p**: positioning without adjustable ring-nut, rotating pin with zinc-plated steel threaded stud, chamfered flat end UNI 947: ISO 4753 (see Technical Data on page A11).
- **LAC-SST-p**: positioning without adjustable ring-nut, rotating pin with AISI 303 stainless steel threaded stud, chamfered flat end UNI 947: ISO 4753 (see Technical Data on page A11).
- **LAC-R-B**: positioning with adjustable ring-nut, rotating pin with zinc-plated steel threaded hole.
- **LAC-R-p**: positioning with adjustable ring-nut, rotating pin with zinc-plated steel threaded stud, chamfered flat end UNI 947: ISO 4753 (see Technical Data on page A11).
- **LAC-R-SST**: positioning with adjustable ring-nut, rotating pin with AISI 303 stainless steel threaded hole.
- **LAC-R-SST-p**: positioning with adjustable ring-nut, rotating pin with threaded stud in AISI 303 stainless steel, chamfered flat end UNI 947: ISO 4753 (see Technical Data on page A11).

FEATURES AND APPLICATIONS
Cam lever is a device which allows a quick and secure clamping.
The LAC-R model with adjustable ring-nut (ELESA patent) offers quick and secure clamping. The knurled ring-nut on the base allows to adjust the clamping force applied while locking the lever in the desired position.

RECOMMENDATIONS FOR ASSEMBLY
LAC-B, LAC-SST, LAC-R-B and LAC-R-SST with threaded hole. The screw where the cam lever is mounted must protrude from the assembly surface by a maximum length of h1 max from the end-stop as shown in table and fig.1. The user will notice the h1 max value is reached as the screw rests on the end-stop in the connecting element.

INSTRUCTIONS FOR CLAMPING AND ADJUSTMENT
LAC: lift and rotate the lever clockwise until it stops, then, to complete clamping, lower the lever whose fulcrum is an eccentric cam which controls the base by rotating.
LAC-R: rotate the lever clockwise until it stops.
Fine adjustment: rotate clockwise or anti-clockwise the knurled adjustable ring-nut to calibrate the clamping force and put the lever in the desired position. The ring-nut is marked with minimum and maximum adjustment values: half a turn is enough for adjustment.
Clamping: lower the lever whose fulcrum is an eccentric cam which controls the adjusting base by rotating.

GN 316

Ratchet spanner

SPECIFICATION

Housing
Steel
plastic coated
black matt, textured finish

Shaft
Stainless Steel AISI 303
matt shot-blasted

Wearing parts hardened

Domes gear knobs I.222 N (see page 537)
Plastic, Duroplast
black, shiny finish

INFORMATION

Ratchet spanners GN 316 are well designed of robust construction and simple to use.
To exchange the inserts remove screw and cover. They are, however, also practical for fixed applications on any machinery and equipment. For example for assembly and repair work. The inserts are easily interchanged and can be supplied individually.

ON REQUEST

- other inserts

TECHNICAL INFORMATION

- Square DIN 79 (see page A16)
- ISO-Fundamental Tolerances (see page A21)

Function

In order to reverse the operation of this spanner move the cam lever from its middle position either to the left or the right to obtain the function required. In the middle position the ratchet funtion is eliminated and the spann can be used in both directions as an ordinary spanner.

Control levers

Steel, blackened

SPECIFICATION

Steel
blackened

Ball knobs DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

Control levers GN 211 can be used in connection with indexing elements, grooves for angle limitations and such like due to their comparably big hub diameter.
Spring plungers as well as indexing plungers can be used as indexing elements.
Control levers GN 211 can also be supplied as standard with:
Square DIN 79 **V** + Bore-Ø
Keyway DIN 6885 **K** + Bore-Ø

TECHNICAL INFORMATION

- Keyway P9 DIN 6885 (see page A16)
- ISO-Fundamental Tolerances (see page A21)

Clamping levers

PUSH to disengage

SPECIFICATION

Types

- Type **M**: Straight lever
- Type **N**: Angled lever

Steel
blackened

Version with threaded stud
Tensile strength class 5.8

INFORMATION

Clamping levers GN 99.2 are known for their small dimensions. They are for use in applications where either the clamping range is limited or where a specific lever position is required. The serrated bore in the spherical hub is fitted with a threaded bolt insert which engages in the hub with its own serrations.
By depressing the clamping lever the serrations are disengaged freeing it for re-positioning in the most convenient position. When releasing the lever the serrations will re-engage automatically.
Should a rotation of 360° not be possible the insert can be slightly screwed in (after the lever has been disengaged) by means of the slotted knurled screw.

GN 150

Split hubs

SPECIFICATION

Sintered Steel
black oxidised with vapor

Cylinder head screw
Steel, black

INFORMATION

Split hubs GN 150 are distinguished by the method of simple clamping to any shaft.
This can be achieved without prior machining of the shaft, eliminating clamping parts and assembly work.
A further advantage is the positioning of the lever arm to any required position.
The shaft tolerance should be within h11; to transmit higher torques the hub can be supplied with a keyway.

GN 150.5

Stainless Steel-Split hubs

SPECIFICATION

Stainless Steel (Sintered Steel) AISI 316L

Cylinder head screw
Stainless Steel AISI 304

INFORMATION

Split hubs GN 150.5 are distinguished by the method of simple clamping to any shaft.
This can be achieved without prior machining of the shaft, eliminating clamping parts and assembly work.
A further advantage is the positioning of the lever arm to any required position.
The shaft tolerance should be within h1; to transmit higher torques the hub can be supplied with a keyway.

DIN 6304

Tommy screws

with fixed bar

SPECIFICATION

Types

- Type **E**: without thrust pad
- Type **F**: with thrust pad DIN 6311 (see page 938)

Steel
Tensile strength class 5.8

- blackened
- Thrust point hardened

INFORMATION

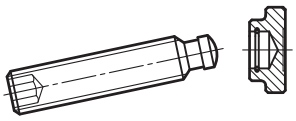
The thrust point of these screws DIN 6304 is designed to be used with or without a thrust pad for clamping.
The snap ring is a simple and quick method to connect the thrust pad to the tommy screw.
Instead of DIN 6311 (see page 938) a thrust pad GN 6311.1 (see page 939) can be used. In that case the tommy screw and the thrust pad have to be ordered separately .

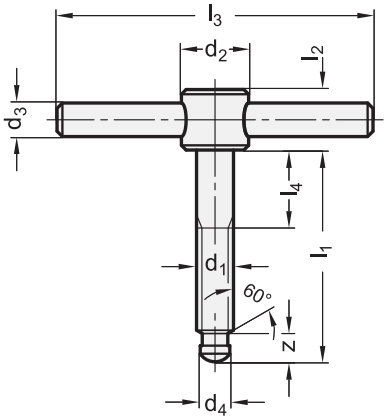
TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

HINT FOR INSTALLATION (TYPE F)

The thrust pad has to be held at an angle allowing the circlip to drop to the bottom of its groove with the split end downwards. The thrust point is then offered up tp the spit end of the circlip at the lowest possible angle and pressed home.





*Complete with type of the Tommy screws (E or F)

E without thrust pad **F** with thrust pad

DIN 6306

Tommy screws

with movable bar

SPECIFICATION

Types

- Type **D**: without thrust pad
- Type **E**: with thrust pad DIN 6311 (see page 938)

Steel
Tensile strength class 5.8

- blackened
- Thrust point hardened

Bar end caps
Plastic, grey

INFORMATION

The thrust point of these screws DIN 6306 is designed to be used with or without the thrust pad for clamping.
The snap ring is a simple and quick method to connect the thrust pad to the tommy screw.
Instead of DIN 6311 (see page 938) a thrust pad GN 6311.1 (see page 939) can be used. In that case the tommy screw and the thrust pad have to be ordered separately.
The movable bar of the tommy screw DIN 6306 is held in any position by the pressure spring.
The end caps are pressed on to the bar and thus limit the bar travel, they can also be supplied separately should the bar be plated first.
The official DIN standard sheets provides for steel rings at this point.

GN 6305.1

Quick release toogle nuts

SPECIFICATION

Steel
zinc plated, blue passivated

Butt-welded-toogle

INFORMATION

Quick release toggle nuts GN 6305.1 are used in such applications where the knob has to be completely removed after the releasing operation and refitted rapidly for re-clamping.
Plug the toggle nut onto the threaded bolt at an oblique angle. During the clamping action, it engages into the threads of the bolt.

silver, RAL 9006, textured finish **SR**
white, RAL 9016, antimicrobial **WSA**

anodized, natural colour **EL**

blank, tumbled **BL**

INFORMATION

GN 565 cabinet „U" handles are made from a bent aluminum profile and have excellent stability and ergonomic design. Due to the production process, special designs can be supplied even in relatively small quantities.
In addition to the standard surfaces, these cabinet „U" handles are also available with a functional coating.
The **SWU** version is coated with a highly weather-resistant and UV-protective powder coating system, making this version excellent for outdoor use.
The **WSA** version has a powder coating based on zinc molybdate, which gives it antimicrobial properties. The principle of action, which is activated by the presence of moisture, demonstrably reduces the growth of viruses, bacteria, and fungi within 24 hours, so that contaminated surfaces ultimately have less than 0.2% of the original number of microbes.
Standard elements with antimicrobial plastic coating are primarily used in the health care sector and in public buildings, such as airports, train stations, stadiums, etc.

Cabinet "U" handles

Aluminium

SPECIFICATION

Aluminium

plastic coated
black, RAL 9005, textured finish **SW**
black, RAL 9005, textured finish, UV-resistant **SWU**
red, RAL 3000, textured finish **RS**
silver, RAL 9006, textured finish **SR**

anodized, nautral colour **EL**

blank, tumbled **BL**

INFORMATION

GN 565.1 cabinet „U“ handles are made from a bent aluminum profile and have excellent stability and ergonomic design. Due to the production process, special designs can be supplied even in relatively small quantities.
In addition to the standard surfaces, these cabinet „U“ handles are also available with a functional coating.
The **SWU** version is coated with a highly weather-resistant and UV-protective powder coating system, making this version excellent for outdoor use.

TECHNICAL INFORMATION

- Load rating information (see page A35)

Counterbored
for cap screw

Inclined cabinet "U" handles

Aluminium

SPECIFICATION

Types

- Type **A**: Mounting from the back (threaded blind bore)
- Type **B**: Mounting from the operator's side

Aluminium

plastic coated
black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**
anodized, natural colour **EL**

blank, tumbled **BL**

INFORMATION

Inclined cabinet "U" handles GN 565.2 are produced from profiled aluminum extrusions. Produced from profiled aluminium extrusions their special features are their rigidity and ergonomical shaping.
The angled contact surface allows improved access even in tight spaces such as corners.
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.
In type B lens screws, hexagon nuts and washers are included parts of the order.

Cabinet "U" handles

Polyurethane foam rubber

SPECIFICATION

Sheating
Thermoplastic polyurethane (TPU)

- black, matt textured finish
- elastic, 65 ±5 shore A
- temperature resistant up to 70 °C
- abrasion-resistant
- insulating
- weather-proof

INFORMATION

The shock absorbing casing of the GN 564 "U" handles made of Thermoplastic polyurethane (TPU) offers protection from injuries, while its elliptical shape give it a nice hold.
The steel core guarantees high durability.

TECHNICAL INFORMATION

- Elastomer characteristics (see page A32)
- Load rating information (see page A35)

Bridge handles

Technopolymer

MATERIAL
High-resilience polyamide based (PA) technopolymer.

STANDARD EXECUTIONS
- **M.843:** in six standard colours: black, orange, grey, yellow, light-blue, red, glossy finish, brass bosses, threaded holes.
- **M.843-CLEAN:** white colour similar to RAL 9002, glossy finish, AISI 303 stainless steel bosses, threaded holes.

FEATURES
This handle is particularly suitable to be produced in light colours: the glossy finish guarantees perfect cleaning. In particular,
M. 843 CLEAN handle, thanks to its white colour and glossy finish, is suitable for applications on medical and hospital equipment and on food processing machines whose parts, for hygienic reasons, must be frequently cleaned. Its solid shape without cavities prevents unhealthy residues from depositing.

TECHNICAL DATA
Tensile stress and impact strength: the values F1, F2, L1 and L2 indicated in the table were obtained during breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.
The tests have revealed that the special technopolymer used can absorb very strong shocks, with no damages, thanks to its high-resilience.

Adapters for assembly on tubes of M.643-FM handles

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

FEATURES AND APPLICATIONS
The adapters allow assembling M.643-FM handles on round tubes with a diameter between 28.6 mm and 32 mm.

MOUNTING
- Plain hole passing completely through the tube with a nut on the outside (Fig.1).
- Threaded hole in the tube wall for tubes with thickness > 2mm (Fig.2).

TECHNICAL DATA
Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

Handles for heat insulation

Steel and technopolymer

METAL STRUCTURE
Steel round cross section bar with fine ground matte chrome-plated surface.
Threaded blind holes.

END BUSHES
Steel, chrome-plated matte surface.

HEAT INSULATION ELEMENT
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

FEATURES AND APPLICATIONS
The MMT. handle is particularly suitable for applications on surfaces subject to high temperatures. The internal aeration canals of the technopolymer heat insulation element minimize the heat transfer. Its particular shape offers a comfortable grip and puts the operator's fingers away from the heat source.

TECHNICAL DATA
Figure 1 shows the different temperatures reached in various points of the handle assembled to a plate stabilized at 200°C during laboratory tests.

Bridge handles

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

SCREW-COVERS
Technopolymer in Ergostyle colours, matte finish; supplied with the handle, press-fit assembly, removable by a screwdriver.
Available also as accessories sold separately (see table ECA.).

Code	Description	Caps for
29830-*	ECA.B0-*	EBP.110
29831-*	ECA.B1-*	EBP.140 EBP.150 EBP.180 EBP.200

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS
- **EBP.**: pass-through holes for front or rear mounting by means of cylindrical-head screws with hexagon socket, hexagonal-head screws or standard nuts.
- **EBP-B**: brass bosses, threaded blind holes for back mounting.

FEATURES AND APPLICATIONS
EBP. handles with front mounting can be assembled in pairs opposed to EBP.B handles with back mounting (Fig. 1).

Fig.1

TECHNICAL DATA
Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

ACCESSORIES ON REQUEST
Spacer sleeves DS-EBP in polyamide based (PA) technopolymer to increase the distance between the handle and the fitting surface.

Bridge handle

Technopolymer with antimicrobial protection

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer with silver ions on an inorganic ceramic base, black colour, matte finish.

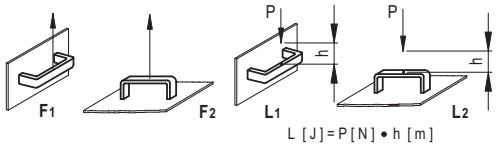
SCREW-COVERS
Technopolymer, black colour, matte finish. Supplied with the handle, press-fit assembly, removable by a screwdriver.

STANDARD EXECUTION
Pass-through holes for cylindrical-head screws with hexagon socket.

FEATURES
The antimicrobial material EBP.SAN handle is made out of, stops any deposit of bacteria, mildew and fungi, offering a sanitized effect on the surface.
Tests carried out on material samples confirmed the absolute stability of the antimicrobial action after several cleaning cycles at high temperatures with soap and solvents.
The great resistance to high temperatures of the antimicrobial additive allows this handle to reach sterilisation temperatures (130°C).
Samples of this material have undergone laboratory tests in compliance with JIS Z 2801. The microbes used to carry out these tests are the ones which present the greatest resistance to antimicrobial products:
- Klebsiella pneumoniae ATCC 4352;
- Escherichia coli ATCC 8739;
- Staphilococcus aureus ATCC 6538P;
- Pseudomonas aeruginosa ATCC 12055.

APPLICATIONS
EBP.SAN handle is suitable for applications where hygienic and sanitary elements are required:
- medical and hospital equipment
- disability aids
- machines for food processing and pharmaceutical industry
- equipment for catering service
- urban and public fittings.

ERGOSTYLE®



TECHNICAL DATA

EBP.FLX

Flexible bridge handles

Technopolymer with elastomer

MATERIAL
Polypropylene based (PP) technopolymer with elastomer (TPE), greyblack colour, matte finish.

SCREW-COVERS
Technopolymer in Ergostyle colours, matte finish; supplied with the handle, press-fit assembly, removable by a screwdriver.
Available also as accessories sold separately (see table ECA.).

Code	Description	Caps for
29831-*	ECA.B1-*	EBP.140-FLX / EBP.180-FLX

* Complete with colour index (C1, ..., C6)

STANDARD EXECUTION
Brass bosses with pass-through holes for cylindrical-head screws with hexagon socket.

FEATURES AND APPLICATIONS
EBP.FLX flexible handle (elastomer) can be assembled on curved surfaces with diameters between 300 and 800 mm. For diameters exceeding 800 mm, EBP. standard handle can be used.

TECHNICAL DATA
Tensile stress: F1 and F2 values reported in the table represent the maximum limit value under which EBP.FLX handle can perform elastic deformation. Impact strength does not apply in this case due to the high elastic features of the product.

ERGOSTYLE® design96/97 INDUSTRIE FORUM DESIGN HANNOVER 1995 stuttgart

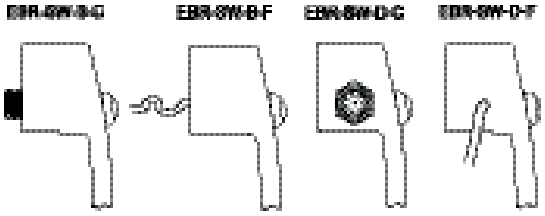
Handle with microswitch

Technopolymer

ERGOSTYLE®



MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

MICROSWITCH WITH BUTTON
The device is made up of a normally open contact (NO) and a normally closed contact (NC).
Switching takes place by pressing the button (monostable contact).

LED
A red light and a green light indicate the microswitch status.
Tension feed 24Vdc.

SCREW-COVERS
Technopolymer, grey-black colour, matte finish. Supplied assembled, removable by a screwdriver.

STANDARD EXECUTIONS
Pass-through holes for cylindrical head screws with hexagon socket.
- **EBR-SW-B-C:** zinc-plated connector with 8 poles, back axial output.
- **EBR-SW-B-F2.5:** 8 pole cable, length 2.5 metres, back output.
- **EBR-SW-B-F5:** 8 pole cable, length 5 metres, back output.
- **EBR-SW-D-C:** zinc-plated steel connector with 8 poles, side axial output.
- **EBR-SW-D-F2.5:** 8 pole cable, length 2.5 metres, side output.
- **EBR-SW-D-F5:** 8 pole cable, length 5 metres, side output.

FEATURES AND APPLICATIONS
These handles are typically assembled on machine doors or protections. With the correct electrical connection and the machine working, the red light is turned on and the green light is off. By pressing the button, the operator, via external contact, requests access to the protected area: in this case the green light will turn on, while the red one will be off.
The EBR-SW handle is an ideal combination: ergonomic, functional and compact.

TECHNICAL DATA
Tensile stress and impact strength: the values F1, F2, L1 and L2 indicated in the table were obtained during breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

ACCESSORIES ON REQUEST
FC-M12x1: extensions with 8 pole M12 female axial connector, sheath in PVC black colour type UL/CSA STYLE 2587 8 X AWG 22.
- Code **426503**: CABLE WITH CONNECTOR M12-8 FEMALE CONTACTS 2.5m (length 2.5 m).
- Code **426506**: CABLE WITH CONNECTOR M12-8 FEMALE CONTACTS 5m (length 5 m).
- Code **426511**: CABLE WITH CONNECTOR M12-8 FEMALE CONTACTS 10m (length 10 m).

Handle with pneumatic valve

Technopolymer

ERGOSTYLE®

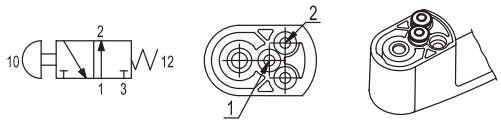
MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

PUSH BUTTON
Light-blue technopolymer, glossy finish.

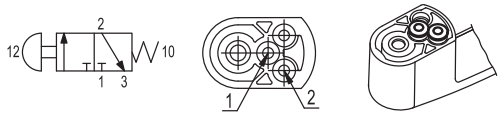
SCREW-COVERS
Technopolymer, grey-black colour, matte finish. Supplied assembled, removable by a screwdriver.

STANDARD EXECUTIONS
Brass bosses, threaded blind hole.

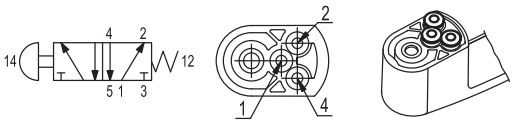
- **EBR-PN-3/2-NO**: the pneumatic valve is normally open. The actuation of the button stops the air passage.



- **EBR-PN-3/2-NC**: the pneumatic valve is normally closed. The actuation of the button opens the air passage.



- **EBR-PN-5/2**: the actuation of the button switches the output channel of the air, between the two available.



FUNCTIONING
The handle is supplied with quick couplings for direct fitting of a tube Ø 4 mm for pneumatics.
The handle allows the direct drive of a single-acting pneumatic actuator (execution 3.2) or double acting (execution 5.2). The force to be applied to the button for the actuation of the drive is independent from the operating pressure.
The handle is already set up with discharge function of the pressure chamber.

TECHNICAL DATA
Tensile stress and impact strength: the values F1, F2, L1 and L2 indicated in the table were obtained during breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

Technical features	
Operating medium	Filtered air
Operating pressure	2 ÷ 10 bar
Operating temperature	-20° ÷ +80°C: dry air 0° ÷ +80°C: lubricated air
Normal rated flow	130 Nl/min (6 bar, free exhaust)
Actuation force	22 N (independent from the operating pressure)
Nominal diameter air passage	Ø 2.5 mm

Bridge handles

Self-extinguish technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer certified self-extinguish UL-94 V0, black colour, matte finish.

STANDARD EXECUTION
Pass-through holes for cylindrical-head screws with hexagon socket.

TECHNICAL DATA
In long-term thermal ageing tests, with a maximum decrease in critical mechanical properties by 50%, the relative temperature index UL 746 B (RTI) was equal to 65.
The "V0" certification in accordance with UL-94 V (Underwriters Laboratories) (see Technical Data on page A5) indicates that on a plastic test sample with specific shape and dimensions, in the vertical position, the flame is extinguished within 10 seconds, without generating any incandescent drops.
Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

M.443 ESD

Bridge handles

ESD conductive technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) special conductive technopolymer, black colour, matte finish. 10^3 Ω surface resistivity (ASTM D257 trial method), 10^3 Ωcm volume resistivity (ASTM D257 trial method).

STANDARD EXECUTION

Pass-through holes for cylindrical-head screws with hexagon socket.

FEATURES AND APPLICATIONS

The special conductive technopolymer (ESD-C Electrostatic Discharge Conductive) prevents the accumulation of electrostatic charge. M.443-ESD handles are suitable for ESD PROTECTED AREA (EPA) where components which are susceptible to electrostatic discharges are to be handled with the minimum risk of damage. The indelibly printed mark (ESD-C) on the surface of the handle identifies the particular conductivity feature according to EN 100015/1 and IEC 61340-5-1.

TECHNICAL DATA

Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

INFORMATION

Cabinet handles GN 668 are produced from aluminium extrusions. They can be mounted either from the back (type A) or by means of the handle base from the operator's side (type B).
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.

Rack handles

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
- **M.943-B:** brass bosses, threaded blind holes.
- **M.943-AF:** blind holes for self-tapping screws Ø 4.8 (UNI ISO 7049). Maximum torque recommended 5 Nm.

FEATURES AND APPLICATIONS
Suitable for applications on a 19" rack and instruments in general.
In the column HE of the table below the height units of the front panel are contained: 1 HE = 44.45 mm (1 6/8") to enable you to choose the correct handles.

TECHNICAL DATA
Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

SPECIAL EXECUTIONS ON REQUEST
- RAL 7031 grey colour handle, matte finish.
- Chrome-plated handle, matte finish.

INFORMATION

The dimensisons of the Rack Handles GN 423 have been designed to match a 19" rack and ennclosure layout.
Handle bar and handle shanks are interconnected via a plug-type connection, with the effect that special lengths are easily realised.
Thanks to the fixing screws included in the set, the Rack Handles are easily and economically mounted.

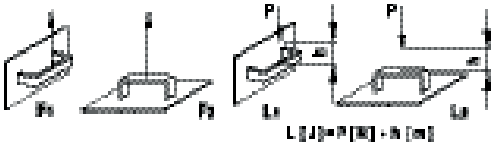
Bridge handle

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, glossy finish.

STANDARD EXECUTION
Pass-through holes for screws or rivets.

TECHNICAL DATA
Tensile stress and impact strength: the values F1, F2, L1 and L2 indicated in the table were obtained during breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.



ELESA Original design

Bridge handle

Technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, glossy finish.

SCREW-COVERS

Technopolymer in six standard colours, matte finish. Supplied with the handle, removable by a screwdriver.
Available also as accessories sold separately (see table ECA.).

Code	Description	Cap for
29831-*	ECA.B1-*	M.479/150

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS

- **M.479/150-8:** pass-through holes for cylindrical-head screws with hexagon socket.

Screw covers to be press-fit assembled.

- **M.479/150 B-M8:** brass bosses, threaded holes.

Screw covers supplied assembled.

TECHNICAL DATA

Tensile stress and impact strength: F1, F2, L1 and L2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

INFORMATION

A special characteristic of the Handle GN 559 is the thumb rest pad on the front of the leg.
At the same time the extended leg offers an open ended version with wide access.
Handles GN 559 are known for their high stability. They are fixed by two M8 screws whereby type A offers two alternative hole centers (l_2 or l_3).

Finger handles

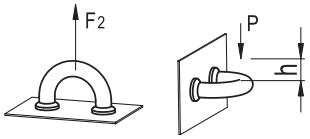
Technopolymer

MATERIAL
Polyamide based (PA) technopolymer.

STANDARD EXECUTIONS
Blind holes for fitting by means of no. 2 self-tapping screws for plastic materials Ø3.5 (UNI ISO 7049), not included in the supply.
Maximum tightening torque of the self-tapping screws 1,2 [Nm].
- **MFH-AF**: in 4 standard colours: black, orange, grey, red, matte finish.
- **MFH-AF-CLEAN**: white colour similar to RAL 9002, matte finish.
- **MFH-CR**: chrome-plated, matte finish.

CHEMICAL AGENTS RESISTANCE (FOR MFH-CR)
The chrome-plating makes the surface finish semi-glossy and homogeneous to facilitate cleaning operations.
The chrome-plated surface is resistant to wear, scrapes and shocks.
Laboratory tests carried out at ambient temperature (23°C) proved the resistance of the surface to: detergents, acetone, ethyl alcohol, formic acid, chlorine solutions.

TECHNICAL DATA
Tensile stress and impact strength: the values F2 and L1 indicated in the table were obtained during breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.



$L_1 [J] = P [N] \cdot h [m]$

INFORMATION

Cabinet "U" handles GN 425 Ø 8 and Ø 10 are supplied with two location discs. They gurantee a perfect location even with large holes in the cabinet. The discs are loosely enclosed.
The chrome-plated design is only conditionally suitable for outdoor use. The stainless steel design version should be given preference.
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.

INFORMATION

Cabinet "U" handles GN 425.1 Ø 8 and Ø 10 are supplied with two location discs. They guarantee a perfect location even with large holes in the cabinet. The discs are loosely enclosed.
The chrome-plated design is only conditionally suitable for outdoor use. The stainless steel design version should be given preference.
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.

blank, tumbled **BL**

Threaded bushings
Aluminium

INFORMATION

GN 426 cabinet „U“ handles are made from a bent aluminum profile and have excellent stability and ergonomic design. Due to the production process, special designs can be supplied even in relatively small quantities.
In addition to the standard surfaces, these cabinet „U“ handles are also available with a functional coating.
The **WSA** version has a powder coating based on zinc molybdate, which gives it antimicrobial properties. The principle of action, which is activated by the presence of moisture, demonstrably reduces the growth of viruses, bacteria, and fungi within 24 hours, so that contaminated surfaces ultimately have less than 0.2% of the original number of microbes.
Standard elements with antimicrobial plastic coating are primarily used in the health care sector and in public buildings, such as airports, train stations, stadiums, etc.

GN 426.5

Stainless Steel-Cabinet "U" handles

SPECIFICATION

Types

- Type **A**: Mounting from the back (threaded blind bore)
- Type **B**: Mounting from the operator´s side

Stainless Steel
d_1 = 20: Solid material
d_1 = 28: Tube-Ø 28 x 2

- AISI 304
- matt shot-blasted

Threaded bush / Mounting stud
Stainless Steel AISI 303

Grub screw (Type B)
d_1= 20: DIN 914-M5-6-NI
d_1= 28: DIN 914-M6-8-NI

INFORMATION

Stainless Steel-Cabinet "U" handles GN 426.5 can be mounted from the back (type A) as well as from the operator's side (type B). In this case the stud is first screwed in from the machine side and then the handle is pushed on and secured with the grub screw.
Both mounting methods allow the mounting of a pair of handles in opposite position. This method could be used e.g. on doors (double handle). In general, a mounting stud with special length l_2 might be required.
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.

GN 426.6

Stainless Steel-Cabinet "U" handles

SPECIFICATION

Types

- Type **A**: Mounting from the back (threaded blind bore)
- Type **B**: Mounting from the operator´s side

Stainless Steel
d1 = 20: Solid material
d1 = 28: Tube-Ø 28 x 2

- AISI 304
- matt shot-blasted

Threaded bush / Mounting stud
Stainless Steel AISI 303

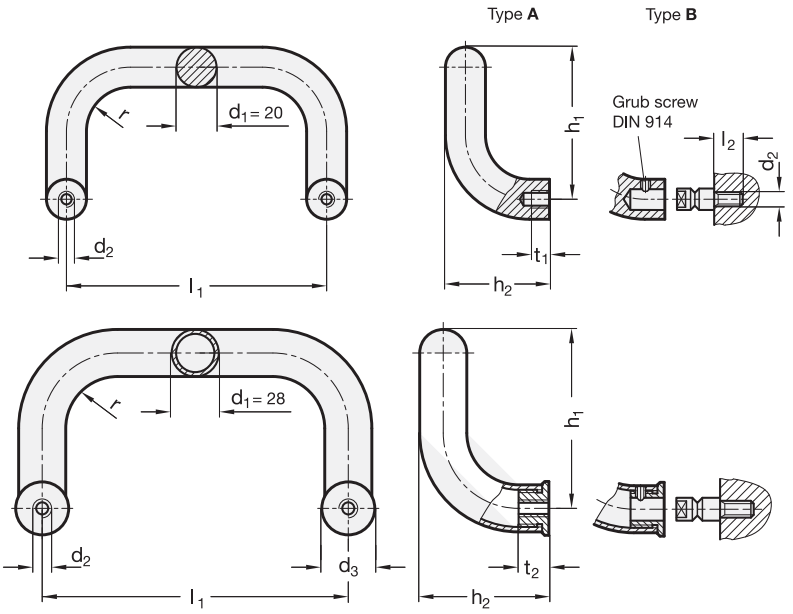
Grub screws (Type B)
d1= 20: DIN 914-M5-6-NI
d1= 28: DIN 914-M6-8-NI

INFORMATION

Stainless Steel-Cabinet "U" handles GN 426.6 can be mounted from the back (type A) as well as from the operator's side (type B). In this case the stud is first screwed in from the machine side and then the handle is pushed on and secured with the grub screw.
Both mounting methods allow the mounting of a pair of handles in opposite position. This method could be used e.g. on doors (double handle). In general, a mounting stud with special length l2 might be required.
The manufacturing process (bending) allows the production of **special lengths** in relatively small quantities.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Load rating information (see page A35)



*Complete with types of the Cabinet "U" handles (A or B)

A Mounting from the back
B Mounting from the operator´s side

INFORMATION

Folding handles GN 425.5 are used in places where the handle must not protrude or protrude only a short distance.
The handle is locked in place in the resting position by means of a spring-loaded (cup springs) thrust bolt.
The static load capacity value given in the table is an approximate value which, if exceeded, may result in permanent deformation or fracture of the plastic attachment part. The folding handle GN 425.2 (see page 466) may be used as an alternative.

plastic coated
black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Folding handle

Version in Steel
chrome plated **CR**

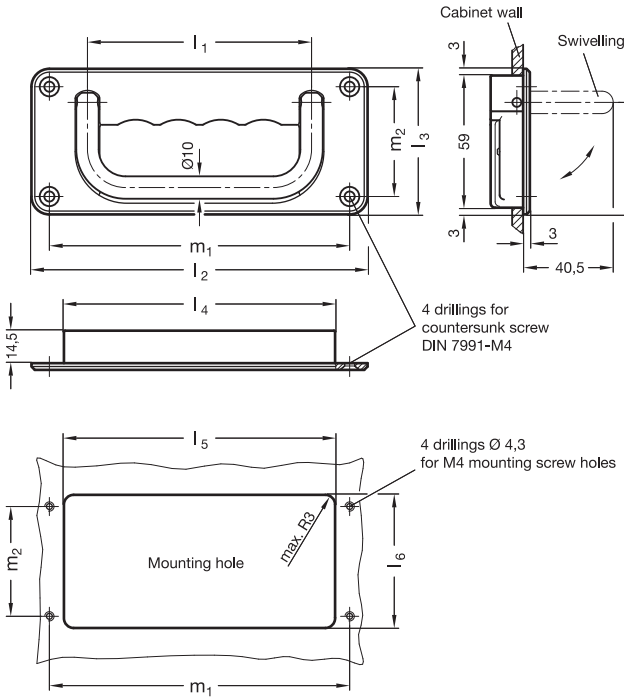
Version in Stainless Steel AISI 303
matt shot-blasted **NI**

INFORMATION

The folding handles with recessed tray GN 425.8 are used if the handle is to protrude by a maximum of 3 mm when folded down.
In type A, the folding handle is held in both end positions by spring-loaded thrust pieces.
In type B, the folding handle always spring-returns to the starting position after being released, preventing it from protruding with potentially interfering effect.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)



* Complete with types of the Folding handles (A or B)

Folding handles with recessed tray

with return springs, technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer.

STANDARD EXECUTIONS
Pass-through holes for M4 countersunk-head screws (not supplied).
- **MPR**: RAL 9005 black colour or RAL 7040 (C33) grey colour, matte finish.
- **MPR-CLEAN**: white colour similar to RAL 9002, matte finish.

ROTATION PIN AND RETURN SPRINGS
AISI 303 stainless steel pin, AISI 302 stainless steel springs.

TECHNICAL DATA
The lifting resistance (F1) and tensile strength (F2) values reported in the table are the result of permanent deformation by means of the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

ASSEMBLY INSTRUCTIONS
Drill the handle housing according to the template dimensions.

GN 730.5

Stainless Steel-Ledge handle

SPECIFICATION

Stainless Steel precision casting **A4**

- AISI 316
- matte shot-blasted **GS**

INFORMATION

The GN 730.5 Stainless Steel-Ledge handle is used on doors, guards and hatches on machines, as well as on drawers and pull-out units. Due to the A4 material used, the handle is intended especially for use in corrosive environments with aggressive media.
The ledge handle is made in a way that does not allow pooling of fluids, which makes cleaning easier and prevents build up of residue and bacteria.
It can be attached from the back side via the mounting thread. Alternatively, the handles can be welded from the front.

ON REQUEST

- polished or plastic coated

Ends
plastic
Technopolymer (Polyamide PA)
black-grey

Lettering block
Insert groove supplied with:

paper strip 200 g/m², width 19.5 mm
bright white, age-resistant

PVC hard film
transparent

INFORMATION

Typical applications for ledge handles with lettering block GN 430.1 include swivel or sliding doors on protective doors and equipment. They are also suitable for use as drawer handles.
The screw channel for screw sizes M6 (extruded aluminium) allows an optional number of fixing screws in any position within the dimension l_2.
Special lengths can be manufactured from relatively small quantities upwards.
In the design with lettering block, the end cap when delivered is mounted on one side such that the paper / film strip supplied can be lettered and pushed into the groove provided.
The paper strip can also be used as substrate for common lettering tape in widths below 18 mm.

ON REQUEST

- Special lengths
- single paper strips / film strips

Guard safety handles

Technopolymer

MATERIAL
Polyamide based (PA) technopolymer, black colour, matte finish.

SCREW COVER
Technopolymer in standard colours: black, orange, grey, yellow, light-blue, red, matte finish, snap-in assembly, removable by a screwdriver.

STANDARD EXECUTION
Pass-through holes for cylindrical-head screws with hexagon socket, hexagonal-head screws or standard lock nuts.

FEATURES AND APPLICATIONS
M.990 handles have been especially designed to fit machine guards or automation systems with double-leaf door. The special closed design of the handle represents a safety element for the operator's fingers. Moreover, the coloured cover improves the visibility of the handle and offers the possibility of product customisation.

TECHNICAL DATA
Tensile stress: F1 value reported in the table is the result of breaking tests carried out with an appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.
Maximum tightening torque for screw assembly 3 Nm.

FEATURES AND APPLICATIONS
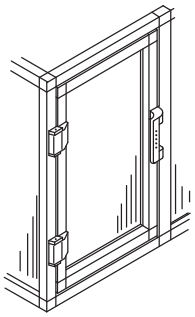
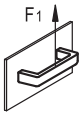
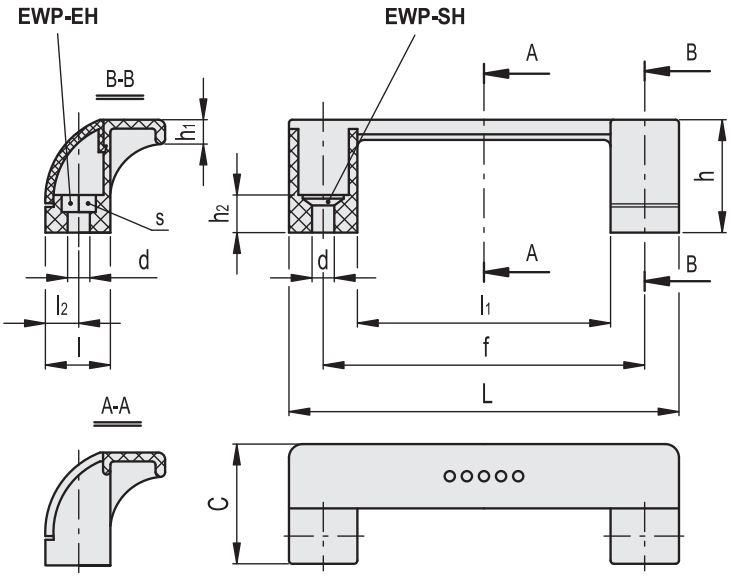
EWP. handles have been especially designed to fit machine guards or automation systems with single-leaf door. The coloured caps improve the visibility of the handle and offer the possibility of product customisation.

TECHNICAL DATA
Tensile stress: F1 value reported in the table is the result of breaking tests carried out with an appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.







*Complete with colour index, example: 265211-C2 EWP.110-EH-C2

Flush pull handles

for snap-in assembly, technopolymer

STANDARD EXECUTIONS

Snap-in assembly (see Assembly Instructions).

- **PR-PF**: glass-fibre reinforced polyamide based (PA) technopolymer, grey-black, orange and light grey colours, matte finish.
- **PR-PF-CLEAN**: glass-fibre reinforced polyamide based (PA) technopolymer white colour similar to RAL 9002, matte finish.

ERGONOMY AND DESIGN

A modern design thanks to the compact shape. The internal profile of the cavity offers a safe, comfortable and ergonomic grip.
PR-PF-CLEAN in white colour is particularly suitable for applications on medical and hospital equipment and for food processing machines.

TECHNICAL DATA

The lifting (F1) and pull out (F2) resistance values reported in the table are the result of the tests carried out in laboratory with handles assembled on strengthened metal sheet panels with thickness = 1.5 mm (strengthened for test purposes).

ASSEMBLY INSTRUCTIONS

1. Drill the handle housing according to the template dimensions reported in the table.
2. Remove all drilling burrs before fitting the handle.
3. Fit the upper part of the handle into the housing (Fig. 1).
4. Press onto the lower part until the handle is completely snapped in (Fig. 2).

Flush pull handles

for snap-in assembly, technopolymer certified self-extinguishing

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer certified self-extinguishing UL-94 V0, grey-black colour, matte finish.

STANDARD EXECUTION
Snap-in assembly (see Assembly Instructions).

ERGONOMY AND DESIGN
A modern design thanks to the compact shape. The internal profile of the cavity offers a safe, comfortable and ergonomic grip.

TECHNICAL DATA
The "V0" certification in accordance with UL-94 V (Underwriters Laboratories) (see Technical Data on page A5) indicates that on a plastic test sample with specific shape and dimensions, in the vertical position, the flame is extinguished within 10 seconds, without generating any incandescent drops.
The lifting (F1) and pull out (F2) resistance values reported in the table are the result of the tests carried out in laboratory with handles assembled on strengthened metal sheet panels with thickness = 1.5 mm (strengthened for test purposes).

ASSEMBLY INSTRUCTIONS
1. Drill the handle housing according to the template dimensions reported in the table.
2. Remove all drilling burrs before fitting the handle.
3. Fit the upper part of the handle into the housing (Fig. 1).
4. Press onto the lower part until the handle is completely snapped in (Fig. 2).

Flush pull handles

for screw mounting, technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

COVER

Technopolymer in Ergostyle colours, glossy finish, removable by a screwdriver by playing upon the central part (see drawing).
Available also as accessory sold separately (see table ECO.).

Code	Description	Cover for
29851-*	ECO.R1-*	EPR.110
29852-*	ECO.R2-*	EPR.120

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS

Pass-through holes for AISI 304 stainless steel self-tapping screws according to ISO 7050 Ø 2.9x9.5 mm, supplied (see Assembly instructions).

- **EPR-SH:** open cavity handle without flap.
- **EPR-F-SH:** handle with grey-black technopolymer flap, matte finish, stainless steel return spring.

ERGONOMY AND DESIGN

A modern design thanks to the compact shape. The internal profile of the cavity offers a safe, comfortable and ergonomic grip. The coloured screw cover improves the visibility of the handle and offers the possibility of product customization.
The flap is a unique feature for closing completely the recess and opens by simply putting the hand into.

TECHNICAL DATA

The lifting (F1) and pull out (F2) resistance values reported in the table are the result of the tests carried out in laboratory with handles assembled on strengthened metal sheet panels with thickness = 1.5 mm (strengthened for test purposes).

DRILLING TEMPLATE

On panels with thickness (s) exceeding 2.5 mm, we recommend you to fit the handle following one of the here-under reported ways:

- by two self-tapping screws in the bores "d";
- by two countersunk head screws M3x6 after tapping the bores in the panel;
- by two countersunk head screws M3x10 with nuts, after drilling blind holes Ø 3.2 mm.

EPR. Flush pull handles

ASSEMBLY INSTRUCTIONS

1. Drill the handle housing according to the template dimensions reported in the table.
2. Remove all drilling burrs before fitting the handle.
3. Fit the upper part of the handle into the housing (Fig. 1) and press onto the lower part until firmly in place.
4. Gently push the handle downward (Fig. 2).
5. Fit the two self-tapping screws (Fig. 3).
6. Assemble the screw cover by pressing on the lateral sides first and finally on the central part (Fig. 4).

Bi-directional flush pull handles

for snap-in assembly, technopolymer

STANDARD EXECUTIONS

- **ERB-PF**: glass-fibre reinforced polyamide based (PA) technopolymer grey-black colour, matte finish.
- **ERB-PF-CLEAN**: glass-fibre reinforced polyamide based (PA) technopolymer white colour similar to RAL 9002, matte finish.

FEATURES AND APPLICATIONS

ERB-PF bi-directional flush pull handles are suitable to open and close sliding doors. The ergonomy of the cavity offers a safe and comfortable grip.
ERB-CLEAN in white colour is suitable for applications on medical and hospital equipment and food processing machines.

TECHNICAL DATA

The pull out resistance values (F2) reported in the table are the result of laboratory tests carried out with the handle assembled on a panel with a thickness of 1.5 mm, stiffened for testing purposes.

ASSEMBLY INSTRUCTIONS

1. Drill the handle housing according to the template dimensions reported in the table.
2. Remove all drilling burrs before fitting the handle.
3. Fit the side of the handle with fixed toothing into the housing (Fig. 1).
4. Press onto the opposite side (elastic toothing) until the handle is completely snapped in (Fig. 2).

Bi-directional flush pull handles

for screw mounting, technopolymer

ERGOSTYLE®

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer.

STANDARD EXECUTIONS

Assembly by means of 4 zinc-plated steel self-tapping screws, Ø 3.5x20, supplied. Maximum tightening torque of the screws 1.2 [Nm].

- **ERB:** grey-black colour, matte finish.
- **ERB-CLEAN:** white colour similar to RAL 9002, matte finish.

FEATURES AND APPLICATIONS

ERB. bi-directional flush pull handles are suitable to open and close sliding doors.
ERB-CLEAN in white colour is suitable for applications on medical and hospital equipment and food processing machines.
The ergonomy of the cavity offers a safe and secure, comfortable and ergonomic grip. Rounded and compact lines.

TECHNICAL DATA

The lifting (F1) and pull out (F2) resistance values reported in the table are the result of the tests carried out in laboratory with handles assembled on strengthened metal sheet panels with thickness = 1.5 mm (strengthened for test purposes).

ASSEMBLY INSTRUCTIONS

1. Drill the handle housing according to the template dimensions reported in the table.
2. Remove all drilling burrs before fitting the handle.
3. Fit the frontal body of the handle into the housing of the panel.
4. Fit the rear body of the handle onto the rear panel and press until the complete fitting with the frontal handle part.
5. Fit the two bodies with self-tapping screws.

- **MLP-AF**: blind holes for fitting by means of no. 2 self-tapping screws for plastic materials Ø5 (UNI ISO 7049), not included in the supply.

TECHNICAL DATA
Tensile stress and impact strength: F1, F2 and L2 values reported in the table are the result of breaking tests, carried out with the appropriate dynamometric equipment, under the test conditions shown in the figure with ambient temperature.

FEATURES AND APPLICATIONS
Ergonomic and comfortable handles. If used in pairs they allow an easy lifting.

Application example

Fastening sets

for cabinet "U" handles

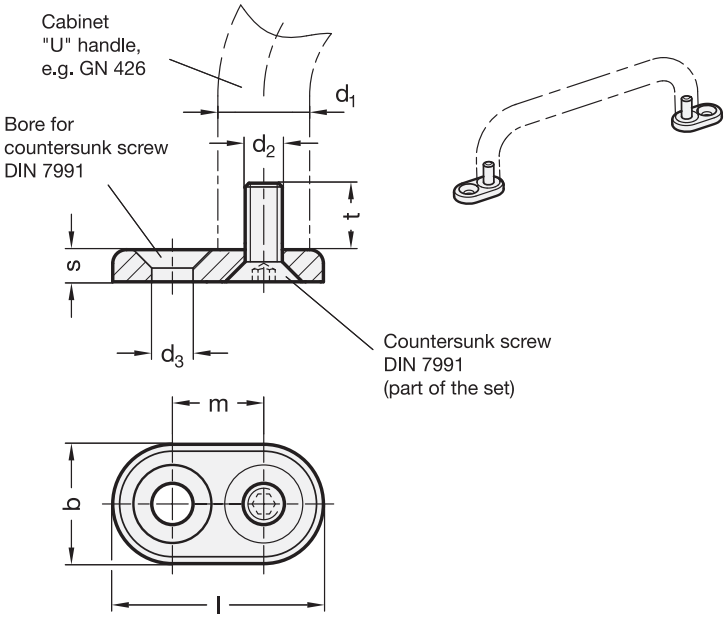
SPECIFICATION

Zinc die casting
plastic coated
black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Countersunk screws
DIN 7991
Steel, zinc plated, blue passivated

INFORMATION

Fastening sets GN 181 make it possible to mount different cabinet "U" handles and tubular handles with internal thread from the operator's side.
The mounting position of the fastening plates is freely customizable, allowing a sideways offset or mounting with different drillhole spacings.
A fastening set consists of 2 fastening plates and 2 countersunk screws.



*Complete with colour index of the Fastening sets (SW or SR)

INFORMATION

Tubular handles GN 331 with power switching function are suitable for unlocking safety tumblers in rotating, detachable or side-sliding safety devices which must be closed in order to safeguard the required operational safety.
By integrating functions such as emergency stop, start, release, reset and LED status display, this tubular handle allows the machine to be monitored and operated directly at the door or gate.

INFORMATION

Tubular handles GN 332 with power switching function are suitable for unlocking safety tumblers in rotating, detachable or side-sliding safety devices which must be closed in order to safeguard the required operational safety.
By integrating functions such as emergency stop, start, release, reset and LED status display, this tubular handle allows the machine to be monitored and operated directly at the door or gate.
Tubular handles GN 332 save mounting and installation work, are attractively designed and optimise ergonomy: the switching and operating functions are located precisely where they are needed.

ACCESSORY

INFORMATION

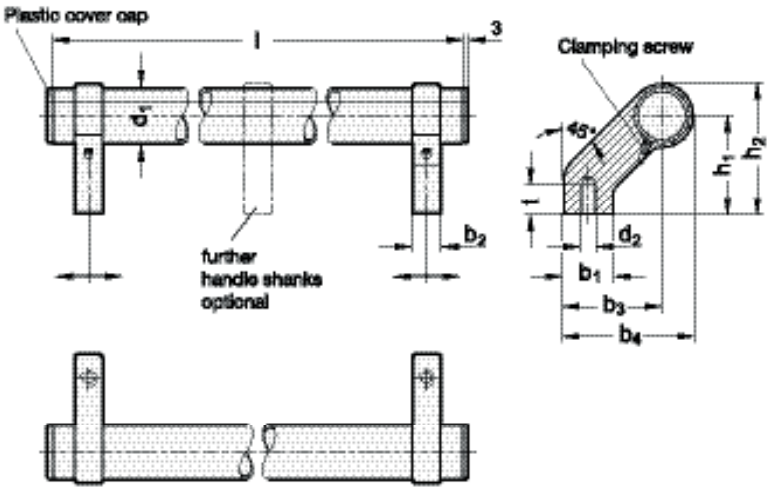
The spacing of the attachment holes of the tubular handles GN 333.2 is adjustable. Further handle shanks can be added for very long tubular handles.
Tubular handles GN 333.2 are supplied unassembled.

TECHNICAL INFORMATION

- Load rating information (see page A35)



*Complete with Finish of the Tubular handles (SW, ELS or ELG)

GN 333.8

Handle shank

for tubular handles, inclined

SPECIFICATION

Type

- Type **A**: Mounting from the back (threaded blind bore)

Zinc die casting
plastic coated
black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

Grub screw with plastic pad GN 913.3-M4-6-KU (see page 921)

INFORMATION

Handle shanks GN 333.8 can be used for longer tubes or higher loads of tubular handles.
They can be used for tube Ø 28 of the tubular handles GN 333.1 (see page 496).

Offset tubular handles

Technopolymer and aluminium

HANDLE SHANKS
Glass-fibre reinforced polyamide based (PA) technopolymer, matte finish.
To prevent tube rotation, screw up to the stop the self-tapping screw ø3,9x6,5 arranged inside the handle shank.

CLOSING CAPS
Polyamide based (PA) technopolymer, in the colours specified in the standard executions, matte finish.
Included in the supply, push-fit assembly (Fig.1), removable by a screwdriver.

MOUNTING
Pass-through hole for front or rear mounting by means of cylindrical-head screws with hexagon socket, hexagonal-head screws or standard nuts.

STANDARD EXECUTIONS
- **M.1053-EP**: aluminium tube, epoxy resin coating, metalflake graphite colour, matte finish. Highly resistant to wear, scratches and chemical agents. Avoid continuous and prolonged contact with boiling water or steam. Handle shanks and closing caps in RAL 9005 (C9)black colour.
- **M.1053-AN-BK**: anodised aluminium tube, natural colour, handle shanks and closing caps in RAL 9005 (C9) black colour.
- **M.1053-AN-GR**: anodised aluminium tube, natural colour, handle shanks and closing caps in RAL 7031 (C31) grey colour.
- **M.1053-CLEAN**: aluminium tube, coating in white colour similar to RAL 9002, handle shanks and closing caps in white colour similar to RAL 9002 (CLEAN).

TECHNICAL DATA
Tensile stress: F values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

SPECIAL EXECUTIONS ON REQUEST
- Different lengths.
- Closing caps in different colours.

ACCESSORIES ON REQUEST
Polyamide based (PA) technopolymer closing caps, in the colours RAL 9005 (C9) black, RAL 7031 (C31) grey, RAL 9002 (CLEAN) white, (see table ECS.T).

M.1053-P

Offset tubular handles

Movable handle shanks, technopolymer and aluminium

PASS-THROUGH HANDLE SHANKS
Glass-fibre reinforced polyamide based (PA) technopolymer, matte finish.
To prevent tube rotation, screw up to the stop the self-tapping screw ø3,9x6,5 arranged inside the handle shank.

CLOSING CAPS
Polyamide based (PA) technopolymer, in the colours specified in the standard executions, matte finish.
Included in the supply, push-fit assembly (Fig.1), removable by a screwdriver.

END CAPS
Polyamide based (PA) technopolymer, matte finish.

MOUNTING
Pass-through hole for front or rear mounting by means of cylindrical-head screws with hexagon socket, hexagonal-head screws or standard nuts.

STANDARD EXECUTIONS
- **M.1053-P-EP**: aluminium tube, epoxy resin coating, metalflake graphite colour, matte finish. Highly resistant to wear, scratches and chemical agents. Avoid continuous and prolonged contact with boiling water or steam. Handle shanks and closing caps in RAL 9005 (C9) black colour.
- **M.1053-P-AN-BK**: anodised aluminium tube, natural colour, handle shanks and closing caps in RAL 9005 (C9) black colour.
- **M.1053-P-AN-GR**: anodised aluminium tube, natural colour, handle shanks and closing caps in RAL 7031 (C31) grey colour.
- **M.1053-P-CLEAN**: aluminium tube, coating in white colour similar to RAL 9002, handle shanks and closing caps in white colour similar to RAL 9002 (CLEAN).

TECHNICAL DATA
Tubular handles are characterised by a variable handle shank, the handle shanks being adjustable on the tube by means of the set screw.
Tensile stress: F values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

SPECIAL EXECUTIONS ON REQUEST
- Different lengths.
- Closing caps in different colours.

ACCESSORIES ON REQUEST
Polyamide based (PA) technopolymer closing caps, in the colours RAL 9005 (C9) black, RAL 7031 (C31) grey, RAL 9002 (CLEAN) white, (see table ECS.T).

GN 333.5

Stainless Steel-Tubular handles

SPECIFICATION

Tube Ø 28 x 2
Stainless Steel

- AISI 304
- matt

Handle shanks
Stainless Steel-precision casting

- AISI CF-8
- matt shot-blasted

INFORMATION

The tube of the Stainless Steel-Tubular handles GN 333.5 is laser welded with the shanks without gap and with tight fit,preventing dirt from entering at this point.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Load rating information (see page A35)

System handles

Aluminium

SPECIFICATION

Types

- Type **A**: Mounting from the back (threaded blind bore)
- Type **B**: Mounting from the operator´s side

Tube / End pieces
Aluminium

plastic coated
black, RAL 9005, textured finish **SW**

anodized, natural colour **EL**

Cover caps
Plastic
Technopolymer (Polyamide PA)
black, matt

Socket head screws DIN 912-M8x75
Steel, zinc plated

Hexagon nuts ISO 4032-M8
Steel, zinc plated

Washers DIN 125
Steel, zinc plated

INFORMATION

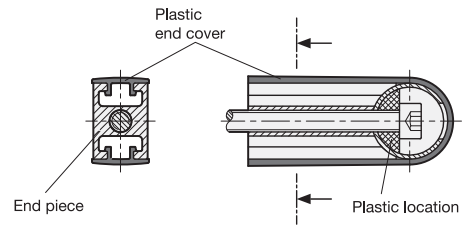
System handles GN 669 offer the the advantage of high stability due to the connection of tube / handle shank.
The screws of type B (mounting from operator´s side) are shrouded.

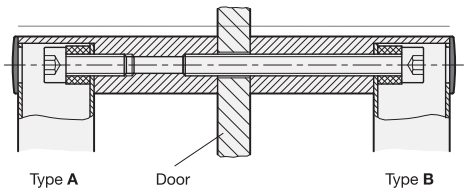
TECHNICAL INFORMATION

- Load rating information (see page A35)

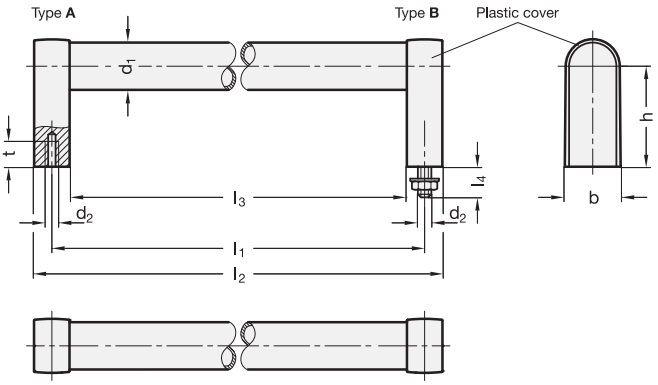
MOUNTING INFORMATION

When mounting from the operator´s side (Type B) the plastic end covers are supplied loose. Once the handle has been-mounted the end covers are pushed over the end of the handle tube and the foot until they snap into the end of the groove at the tube end.
Both mounting methods (Type A and B) allow the mounting of a pair of handles in opposite position. This method could be used on doors (double handle). Depending on the door thickness longer socket head screws DIN 912 might be required.





Mounting as a double handle



*Complete with colour index of the System handles (SW or EL)

SW RAL9005 EL anodized

Stainless Steel-Tubular handles

Mounting from the back

SPECIFICATION

Types

- Type **K**: with plastic cover cap
- Type **E**: with Stainless Steel cover cap

Tube Ø 30 x 1.5
Stainless Steel AISI 304
matt shiny finish, ground

Handle shanks
Stainless Steel AISI 304
matt shiny finish, ground

Grub screw DIN 914-M5
Stainless Steel AISI 304

Cover caps

- Type K: Plastic (Polyamide PA), black matt
- Type E: Stainless Steel AISI 304

INFORMATION

Type E of Stainless Steel-Tubular handles GN 666.5 is completely made of A2-Stainless Steel.

ON REQUEST

- Special lenghts

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

EXAMPLE OF APPLICATION

Tubular handles GN 666.5 allow the mounting of a pair of handles in opposite position. This method could be used on doors (double handle).
Generally a modification of the thread length l_4 required for this. The included threaded pin DIN 913-M8x25-A2 of mounting stud needs to be replaced by a longer threaded pin, too.
Handles with modified thread length l_4 are available on request.

Tubular handles

Technopolymer, aluminium, stainless steel

ELESA Original design

HANDLE SHANKS

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish. Supplied not assembled. The handle shank connection to the tube avoids tube rotation.
Handle shanks group can be sold separately as well (tube not included).

Code	Description
15302	GR-M.1043/20
15301	GR-M1043/30

ANTI-ROTATION TUBE END PLUGS

NBR synthetic rubber.

STANDARD EXECUTIONS

Pass-through holes for cylindrical-head screws with hexagon socket. Two reference pins (to be fitted during handle assembly) guarantee an exact positioning of the shanks.

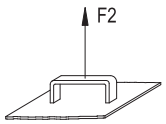
- **M.1043-EP:** aluminium tube, epoxy resin coating, metalflake graphite colour, matte finish. Highly resistant to wear, scratches and chemical agents. Avoid continuous and prolonged contact with boiling water or steam.
- **M.1043-AN:** anodised aluminium tube, natural colour.
- **M.1043-SST:** AISI 304 stainless steel tube.

Threaded blind holes. Two reference pins (to be fitted during handle assembly) guarantee an exact positioning of the shanks.

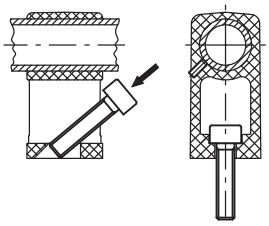
- **M.1043-BM-EP**: aluminium tube, epoxy resin coating, metalflake graphite colour, matte finish. Highly resistant to wear, scratches and chemical agents. Avoid continuous and prolonged contact with boiling water or steam.
- **M.1043 BM-AN**: anodised aluminium tube, natural colour.
- **M.1043-BM-SST**: AISI 304 stainless steel tube.

TECHNICAL DATA

Tensile stress: F2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.



Assembly
SCM. intermediate shank



ACCESSORIES ON REQUEST

- Intermediate shank for tube diameter 20: code 15306 SCM.1043-20.
- Intermediate shank for tube diameter 30: code 15305 SCM.1043-30.

Suggested for tube longer than 700 mm.

- Distance element for side shank with connection for tube Ø30 DS-M.1043 (see table).

***** Maximum working load **#** Load at breakage (permanent deformation).

M.1043-HEI

Tubular handles for electrical insulation

Technopolymer and polyester

HANDLE SHANKS
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
Supplied assembled. The seat for housing the tube in the shank is shaped so as to prevent its rotation.

TUBE
Glass-fibre reinforced polyester, black colour with high resistivity. High resistance to wear, scratches and agents.

MOUNTING
Rear fastening with screws M10.
Two reference pins (to be fitted during assembly) guarantee a precise positioning.

MECHANICAL AND DIELECTRIC FEATURES
Tensile stress: F2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.
The following table lists the main dielectric features of the tube.

ACCESSORIES ON REQUEST
Intermediate shank for tube (recommended for lengths greater than 700 mm): code 15305 SCM.1043-30.

ELESA Original design

Dielectric features of the tube	
Volume Resistivity	$10^{10} \div 10^{15}$ [Ω *cm]
Surface resistivity	$10^{10} \div 10^{13}$ [Ω*] (according to IEC93 standard)
Dielectric resistivity	8 [KV/mm]
Comparative tracking index (CTI)	> 600 (V)
Dielectric constant	5

Assembly
SCM. intermediate shank

***** Maximum working load **#** Load at breakage

Tubular handles

Technopolymer and aluminium

HANDLE SHANKS
Glass-fibre reinforced polyamide based (PA) technopolymer, matte finish.

SIDE CAPS
Technopolymer in Ergostyle colours and white similar to RAL 9002 (CLEAN), glossy finish. Supplied with the handle, press-fit assembly, removable by a screwdriver.
Available also as accessories sold separately (see table ECA.).

Code	Description	Cover for
29871-*	ECA.T1-*	ETH.28
29872-*	ECA.T2-*	ETH.35
29871	ECA.T 1-CLEAN	ETH.28-CLEAN
29872	ECA.T 2-CLEAN	ETH.35-CLEAN

* Complete with colour index (C1, ..., C6).

ANTI-ROTATION TUBE ASSEMBLING SYSTEM
Special expansion-assembly system between the tube and the handle shanks to prevent rotation during operation.

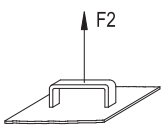
STANDARD EXECUTIONS
Pass-through holes for cylindrical-head screws with hexagon socket, hexagonal-head screws or standard lock nuts.
- **ETH-EP:** aluminium tube, epoxy resin coating, metalflake graphite colour, matte finish. Highly resistant to wear, scratches and chemical agents. Avoid continuous and prolonged contact with boiling water or steam. Side shanks in grey-black colour.
- **ETH-AN:** anodised aluminium tube, natural colour. Side shanks in grey-black colour.
- **ETH-CLEAN**: aluminium tube, coating in white colour similar to RAL 9002, glossy finish. Side shanks in white colour similar to RAL 9002.

Suggested tightening torque:
- back mounting with plain holes: 8 [Nm]
- front mounting with plain or tapped holes: 15 [Nm].

ERGONOMY AND DESIGN
The large diameter of the tube offers a good and comfortable grip; the antirotation assembly system of the handle shanks to the tube has been developed to offer a firm and secure manœuvrability during operations.

TECHNICAL DATA
Tensile stress: F2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

SPECIAL EXECUTIONS ON REQUEST
Different lengths.



ERGOSTYLE® reddot design award

Tubular handles

Technopolymer

TUBE
Aluminium, coating in white colour similar to RAL 9002, handle shanks and end caps in white colour similar to RAL 9002.

HANDLE SHANKS
Glass-fibre reinforced polyamide based (PA) technopolymer, matte finish.

TUBE END CAPS
Polyamide based (PA) technopolymer.

COLOUR
White similar to RAL 9002.

STANDARD EXECUTION
Special zinc-plated steel screws with threaded blind holes, fitted to the tube by means of brass nuts.

FEATURES AND APPLICATIONS
This handle, thanks to its white colour and glossy finish, is particularly suitable for applications on medical and hospital equipment and on food processing machines whose parts, for hygienic reasons, must be frequently cleaned.
Its solid shape without cavities prevents unhealthy residues from depositing.

TECHNICAL DATA
Tensile stress: F2 values reported in the table are the result of breaking tests carried out with the appropriate dynamometric equipment under the test conditions shown in the figure with ambient temperature.

SPECIAL EXECUTIONS ON REQUEST
- Stainless steel tube.
- Different lengths.

Handle tubes

with screw channel

SPECIFICATION

Aluminium

plastic coated
black, RAL 9005, textured finish **SW**
(available up to 3000 mm length)

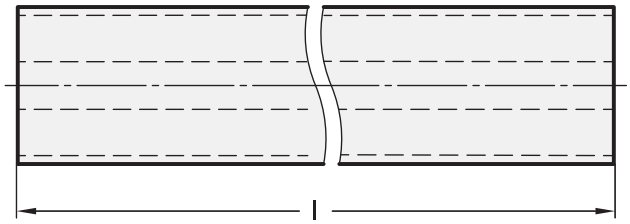
anodized, natural colour **EL**
(available up to 2600 mm length)

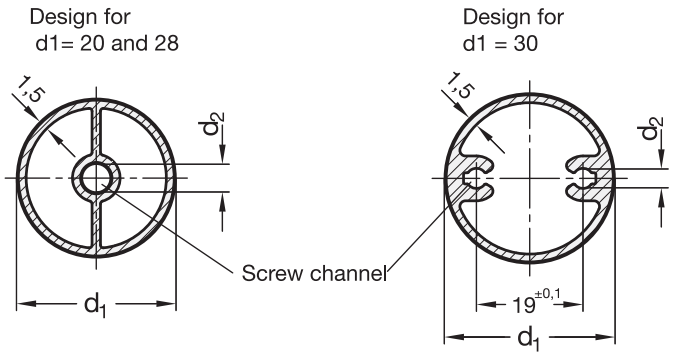
INFORMATION

Handle tubes GN 930 with screw channel are designed for use in a variety of different tube handles (e.g, GN 333, see page 498).
For applications not requiring handle bases, the screw channel provides a very economical fixing solution with thread-tapping screws. The lengths l listed in the table are ex stock lengths. Depending to the finish, any lengths until max. 3000 mm are available.

ON REQUEST

Plastic cover in black or light grey for tube Ø 28





*Complete with colour index of the Handle tubes (SW or EL)

Tube extrusion / End caps
plastic coated
black, RAL 9005, textured finish **SW**

Self tapping countersunk screws
DIN 7500-1, type M with Torx®

INFORMATION

The tube extrusion for edge handles GN 481 is formed in such a way that two countersunk self tapping screws are used to cut their own counter thread in the extrusion to hold the end caps in position.
If an edge handle for a cabinet of non-standard length is required, a standard extrusion can simply be shortened to fit.

ACCESSORY

Four DIN 7500-1 countersunk screws are included.

ON REQUEST

Tube extrusion
anodized, natural colour

End caps, plastic coated
silver, textured finish

MOUNTING INFORMATION

In order to allign the edge handle with the-edge of the cabinet (tolerance l_1 + 2 mm), the end caps should, to start with, only be loosely fitted
The mounting is carried out in two steps as follows:

- Fit the end caps firmly to the cabinet.
- Fix the extrusion axially by using the countersunk screws.

Safety T-Handles

Technopolymer, push action

ELESA Original design

MATERIAL
Glass-fibre reinforced polyamide based (PA), black colour, matte finish, technopolymer with "PUSH" tampoprinted in grey colour. Avoid contact with solvents, alcohol or detergents containing alcohol to prevent deterioration of the tampoprinted inscription.

CENTRE CAP
Technopolymer, black colour. On request and for sufficient quantities, it can be supplied in yellow RAL 1021 (safety) or in other colours, with customised graphic symbols, marks or writing.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with toothing and retaining pin, black colour, with knurling on the protruding part to make initial tightening easier. AISI 302 stainless steel return spring.
- **L.652-S-B:** brass boss, threaded blind hole.
- **L.652-S-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947 : ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS
Particularly suitable where the handle needs to turn freely to avoid that clamping may be accidentally affected.

INSTRUCTIONS OF USE
Press the handle to engage the toothing and turn it. By releasing the handle the spring releases the toothing, thus the handle returns to the rest position.

L.652-X

Adjustable T-Handles

Technopolymer

ELESA Original design

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

CENTRE CAP
Technopolymer, black colour.

STANDARD EXECUTIONS
Glass-fibre reinforced technopolymer clamping element with toothing and retaining pin, black colour. AISI 302 stainless steel return spring.
- **L.652-X-B:** brass boss, threaded blind hole.
- **L.652-X-p:** zinc-plated steel threaded stud, chamfered flat end UNI 947: ISO 4753 (see Technical data on page A11).

FEATURES AND APPLICATIONS
Particularly suitable when clamping operations are limited owing to lack of space and the hand of the operator cannot make a complete rotation.

INSTRUCTIONS OF USE
For clamping, lift the handle to disengage the clamping device toothing and bring it back to start position. By releasing the handle, the return spring automatically engages the toothing.

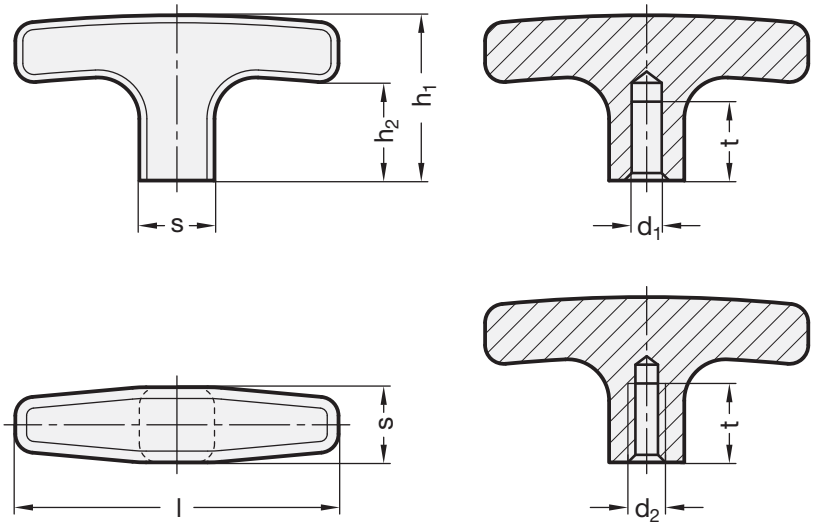
black, RAL 9005, textured finish **SW**
silver, RAL 9006, textured finish **SR**

blank **BL**
tumbled, flash mark not visible

INFORMATION

T-Handles GN 563.2 can be used as either operating handles or for clamping purposes, producing high clamping forces.
T-Handles are produced using a stamping process which yields a high density material of high strength and a smooth surface.
An original ELESA-Design, produced in metal with permission of ELESA s. p. a.



* Complete with colour index of the T-Handles (SW, SR or BL)

I.622 N

CLEAN RoHS PA +50° -20°

Tapered handles

Technopolymer

MATERIAL
High-resilience polyamide based (PA) technopolymer.

STANDARD EXECUTIONS
Plain blind hole.
- **I.622-N**: black or red colour, glossy finish.
- **I.622-N-CLEAN**: white similar RAL 9002, glossy finish.

The elastic coupling, by press-fit assembly on h9 tolerance drawn stock bars, is not affected by vibrations and prevents the handle from slipping off (see Technical Data on page A13).

FEATURES AND APPLICATIONS
This handle, thanks to its white colour and glossy finish, is particularly suitable for applications on medical and hospital equipment and on food processing machines whose parts, for hygienic reasons, must be frequently cleaned. Its solid shape without cavities prevents unhealthy residues from depositing.

SPECIAL EXECUTIONS ON REQUEST
Different RAL colours.

ASSEMBLY INSTRUCTIONS
Fit the handle onto slight chamfered shaft end and push as far as possible by hand or by means of a small press. Alternatively it is possible to tap the handle with a plastic or wooden mallet until firmly in place. In this case we strongly recommend to use a cloth or other suitable soft material over the product to avoid any surface damage.

I.222

Tapered handles

Duroplast

MATERIAL
Phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTIONS
- **I.222:** threaded blind hole.
- **I.222-N:** glass-fibre reinforced polyamide based (PA) technopolymer self-locking boss, plain blind hole. The elastic coupling, by press-fit assembly on h9 tolerance drawn stock bars, is not affected by vibrations and prevents the handle from slipping off (see Technical Data on page A13).

ALTERNATIVE PRODUCTS
For handles with dimensions smaller or equal to I.222/55, we suggest the new series I.622 (see page 535) and I-622 N (see page 536) with excellent performance and lower price. The handles with bigger dimensions (70-90 mm) are only available in this series (I.222), due to technical reasons.

ASSEMBLY INSTRUCTIONS (I.222-N)
Fit the handle onto slight chamfered shaft end and push as far as possible by hand or by means of a small press. Alternatively it is possible to tap the handle with a plastic or wooden mallet until firmly in place. In this case we strongly recommend to use a cloth or other suitable soft material over the product to avoid any surface damage.

Aluminium **AL**
polished

Version in Stainless Steel

Types

- Type **C**: with tapped hole
- Type **K**: with plain hole H7

Stainless Steel AISI 303 **NI**
matt shot-blasted

Version in Plastic (Press on type)

Types

- Type **L**: with tolerance ring
- Type **M**: with tapered bore

Type L
Plastic **KU**
Duroplast (Phenolic PF)
black, shiny finish
Tolerance ring
spring steel

Type M
Plastic **KT**
Technopolymer (Polyamide PA)

- shock resistant
- black, matt finish
- Ball knobs press on type in red

INFORMATION

When ball knobs DIN 319 (Press on type) type L and M are used the shaft does not require a thread.
During mounting, easy blows with a soft hammer are sufficient to drive the knob into place, the shaft end should be slightly rounded or chamfered (30°).
Before the assembly of the knobs, type L the tolerance ring is to be inserted into the drilling. Further it is to be noted that the button is put on perpendicular and / or axially parallel. Otherwise the knob may break.
Type M ball knobs are a cheaper solution, however, the pulling off force is less predictable.

ON REQUEST

- Ball knobs press on type in red

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics - Duroplast (see page A2)
- Plastic characteristics - Technopolymer (see page A2)

GN 319.2

Revolving ball knobs

Shaft Steel

SPECIFICATION

Types

- Type **A**: with male thread
- Type **B**: with female thread

Plastic
Duroplast (Phenolic PF)

- temperature resistant up to 110 °C
- black, shiny finish

Shaft Steel
zinc plated, blue passivated

INFORMATION

Revolving ball knobs GN 319.2 can be utilized instead of revolving handles i.e. with handwheels.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

Spherical handles

Duroplast

MATERIAL
Phenolic based (PF) Duroplast, black colour, glossy finish with equatorial groove.

MAGNIFIYNG LENS
Transparent polyamide based (PA-T) technopolymer. Press-fit assembly. It improves the visibility of the labels.

STANDARD EXECUTION
Glass-fibre reinforced polyamide based (PA) technopolymer self-locking boss, plain blind hole.
The elastic coupling, by press-fit assembly on h9 tolerance drawn stock bars, is not affected by vibrations and prevents the handle from slipping off (see Technical Data on page A13).

ACCESSORIES ON REQUEST
Self-adhesive labels MA. (on page 551) with standard marks and symbols to be ordered separately.

ASSEMBLY INSTRUCTIONS
1. Fit the handle, without the magnifying lens, onto slight chamfered shaft end and push as far as possible by hand or by means of a small press. Alternatively it is possible to tap the handle with a plastic or wooden mallet until firmly in place. In this case we strongly recommend to use a cloth or other suitable soft material over the product to avoid any surface damage.
2. Stick the self-adhesive label (printed on the adhesive side) to the inner surface of the magnifying lens by pressing from the centre to the external side to avoid air bubbles. Assemble the magnifying lens to the handle face recess by gently tapping with a wooden or plastic mallet, until firmly in place. The label is therefore protected by the watertight magnifying lens.

Mushroom handles

"Soft-touch" technopolymer

MATERIAL

High-resilience polypropylene based (PP) technopolymer coated with "soft-touch" thermoplastic elastomer (TPE) chemically bonded, hardness 70 Shore A, black colour, matte finish.
The coating material is certified in compliance with FDA (U.S. Food and Drug Administration).

STANDARD EXECUTION

Plain blind hole.
The elastic coupling, by press-fit assembly on h9 tolerance drawn stock bars, is not affected by vibrations and prevents the handle from slipping off (see Technical Data on page A13).

FEATURES AND APPLICATIONS

The coating, with "soft-touch" elastomer, improves the grip even in the presence of oils, greases and sweat from the hand. For this reason it is suitable for fitness machines, tools and machines for gardening and goods transport, high-precision instruments and disability aids.

ASSEMBLY INSTRUCTIONS

Fit the handle onto slight chamfered shaft end and push as far as possible by hand or by means of a small press. Alternatively it is possible to tap the handle with a plastic or wooden mallet until firmly in place. Labels with marks and symbols

Self-adhesive vinyl film

MATERIAL

Self-adhesive vinyl film, suitable for sticking to the inner surface of the magnifying lens of all the following handles: SH.N (see page 543), IH.N (see page 544), IEL.N-H SOFT (see page 545), EBK-H SOFT (see page 550).

STANDARDIZED GRAPHIC SYMBOLS

According to ISO 3287 regulations, printed on the adhesive side; 21 standard models.
The visibility of the symbol is improved by the magnifying effect of the lens provided with the handle.

ASSEMBLY INSTRUCTIONS

Stick the self-adhesive label (printed on the adhesive side) to the inner surface of the magnifying lens by pressing from the centre to the external side to avoid air bubbles.

GN 676.1

Knobs

SPECIFICATION

Types

- Type **A**: without knurl
- Type **B**: with knurl

Steel
blackened

INFORMATION

Knobs GN 676.1 are used in applications where a push or pull movement is required. Their concave top gives a more comfortable thumb grip.
The knurled model (Type B) can be used as an attractively shaped knurled knob with a threaded blind hole.

GN 676.5

Stainless Steel-Knobs

SPECIFICATION

Types

- Type **A**: without knurl
- Type **B**: with knurl

Stainless Steel

AISI 303
matt shot-blasted

INFORMATION

Knobs GN 676.5 are used in applications where a push or pull movement is required. Their concave top gives a more comfortable thumb grip.
The knurled model (Type B) can be used as an attractively shaped knurled knob with a threaded blind hole.

TECHNICAL INFORMATION

GN 75.5

Stainless Steel-
Waist shaped knobs

SPECIFICATION

Types

- Type **D**: with female thread
- Type **E**: with threaded rod

Stainless Steel

- AISI 304
- matt shot-blasted **MT**
- highly polished **PL****

** Version PL is not available from stock, requires a minimum order quantity.

INFORMATION

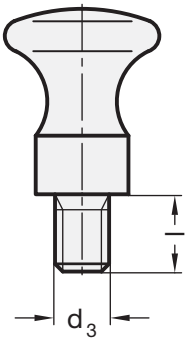
Waist shaped knobs GN 75.5 boast a compact and timeless design. They are made of high-grade stainless steel which makes them the first choice when it comes to applications requiring high standards of hygiene. The favourably designed and non-scooped geomtery helps to prevent damp and the related risk of dirt collecting.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

ON REQUEST

- Steel, zinc plated
- Stainless Steel (A4 quality)



*Complete with finish index of the Waist shaped knobs (MT or PL)

P.390

Tapered handles

Duroplast

MATERIAL
Phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTION
Plain blind hole.
The elastic coupling, by press-fit assembly on h9 tolerance drawn stock bars, is not affected by vibrations and prevents the handle from slipping off (see Technical Data on page A13).

ASSEMBLY INSTRUCTIONS
Fit the handle onto slight chamfered shaft end and push as far as possible by hand or by means of a small press. Alternatively it is possible to tap the handle with a plastic or wooden mallet until firmly in place. In this case we strongly recommend to use a cloth or other suitable soft material over the product to avoid any surface damage.

Knurled handle

“Soft-touch” technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer coated with "soft-touch" thermoplastic elastomer (TPE), hardness 90 Shore A, black colour. matte finish. The coating material is certified in compliance with FDA (U.S. Food and Drug Administration).

STANDARD EXECUTION

Brass boss, plain blind hole.
Fitting to the shaft by means of a black-oxide steel socket set screw according to ISO 4029 (grub screws with hexagon socket and cup end).

FEATURES AND APPLICATIONS

The coating, with "soft-touch" elastomer, improves the grip even in the presence of oils, greases and sweat from the hand. For this reason it is suitable for fitness machines, tools and machines for gardening and goods transport, high-precision instruments and disability aids.

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black or red colour, matte finish.

ASSEMBLY
Threaded blind hole.

EBS+x SOFT

Spherical revolving handle

"Soft-touch" technopolymer

MATERIAL

High-resilience polypropylene based (PP) technopolymer, coated with "soft-touch" thermoplastic elastomer (TPE) chemically bonded, hardness 70 Shore A, black colour, matte finish.
The coating material is certified in compliance with FDA (U.S. Food and Drug Administration).

STANDARD EXECUTION

Zinc-plated steel shank, hexagon socket at threaded end.

FEATURES AND APPLICATIONS

The coating, with "Soft-touch" elastomer, improves the grip even in the presence of oils, greases and sweat from the hand. For this reason it is suitable for fitness machines, tools and machines for gardening and goods transport, high-precision instruments and disability aids.

SOFT RoHS PP TPE +80° 0°

Mushroom revolving handles

"Soft-touch" technopolymer

MATERIAL

High resilience polypropylene based (PP) technopolymer, coated with "soft-touch" thermoplastic elastomer (TPE) chemically bonded, hardness 70 Shore A, black colour, matte finish.
The coating material is certified in compliance with FDA (U.S. Food and Drug Administration).

STANDARD EXECUTIONS

Zinc-plated steel shank, hexagon socket at threaded end.
- **IEL+x:** without ring.
- **IEL+x-A:** with matte anodised aluminium ring (ELESA original design).

FEATURES AND APPLICATIONS

The coating, with "soft-touch" elastomer, improves the grip even in the presence of oils, greases and sweat from the hand. For this reason it is suitable for fitness machines, tools and machines for gardening and goods transport, high-precision instruments and disability aids.

SPECIAL EXECUTIONS ON REQUEST

IEL+x-H: with magnifying lens for labels with marks and symbols.

I.644

Tapered handle

Technopolymer with antimicrobial pretection

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer with silver ions on an inorganic ceramic base, black colour, matte finish.

STANDARD EXECUTION

Zinc-plated steel shank, hexagon socket at threaded end.

FEATURES

The special antimicrobial material, I.644 is made out of, stops any deposit of bacteria, mildew and fungi, offering a sanitized effect on the surface.
Tests carried out on material samples confirmed the stability of the antimicrobial action after several cleaning cycles at high temperatures with soap and solvents.
The great resistance to high temperatures of the antimicrobial additive allows this handle to reach sterilisation temperatures (130°C).

APPLICATIONS

I.644 handle is suitable for applications where hygienic and sanitary elements are required:
- medical and hospital equipment
- disability aids
- machines for food processing and pharmaceutical industry
- equipment for catering service
- urban and public fittings.

EFH.620

Fold-away handles

Technopolymer

MATERIAL
Polyamide based (PA) technopolymer handle, black colour, matte finish.

STANDARD EXECUTION
Black-oxide steel stud, sintered and oxidised steel flat base for embedded mounting, black-oxide steel screw.

FEATURES AND APPLICATIONS
Handle pivots freely during operation: a system of coaxial bushings compensates return spring load.
This series of fold-away handles has been designed for all those applications for which, owing to lack of space or for safety reasons, the handle must be folded-away once the operation has been completed.

Normal assembly example with embedded base

GN 798.7

Safety retractable handles

automatic return to the retracted position

SPECIFICATION

Handle
Plastic **KT**
Technopolymer (Polyamide PA)

- temperature resistant up to 90 °C
- black, matt finish
- revolving

Retractable mechanism
Steel, blackened

INFORMATION

Safety retractable handles GN 798.7 are suitable for applications where the handle must not remain in the operating position.
In order to bring the handle into the operating position it has to be turned first through 90° to a stop against a torsion spring and then it is pushed against spring pressure into its hold position.
By maintaining the forward thrust on the handle, the handwheel can easily be rotated.
When "releasing" the handle, the springs return it back to the retracted position.

ON REQUEST

- Stainless Steel-Safety retractable handles

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

Safety fold-away handles

Technopolymer

MATERIAL

High-resilience polypropylene based (PP) technopolymer handle, black colour, matte finish.

STANDARD EXECUTIONS

- **IRS.802:** black-oxide steel double guide stud, sintered and oxidised steel flat base for embedded mounting, black-oxide steel screw.
- **IRS.802-SST:** AISI 303 stainless steel double guide stud, sintered AISI 303 stainless steel flat base for embedded mounting, AISI 303 stainless steel screw.

FEATURES AND APPLICATIONS

Handle pivots freely during operation: a system of coaxial bushings compensates return spring load.
The safety fold-away handle (ELESA patent) is provided with a special return mechanism "Fold-O-matic"® which automatically folds the handle into the retracted position when the operation has been completed. A light pressure on the handle in the direction of the handwheel axes is enough to bring it in the operation position allowing the operator to turn the handwheel freely.

Scale rings

SPECIFICATION

Types

Type **MCR**: matt chrome plated
Type **MCRS**: matt chrome plated, standard scale 0...90,
100 graduations, acc. scale scheme d1/100 A RA 0-10-20...90/10

Bore codes

- Version **B**: without friction ring
- Version **R**: with friction ring

Steel

- Knurl milled
- Scale lug d1 fine turned
- blank (standard version)
- matt chrome plated **MCR**
- matt chrome plated with standard scale **MCRS**

Scale
engraved with laser precision, black

Clamp ring Rubber

Friction ring Polyamide

INFORMATION

The non-wearing friction ring ensures perfect engagement of the scale ring when re-aligning the spindle. In addition it allows the setting of the scale ring on a static shaft.
Also this scale rings can be supplied with any type of graduation.
Regarding design, numbering run, numbering position and numbering sequence of the scale please see the layout for scale rings on the order sheet "How to order graduations" (see page 594).

ON REQUEST

- special graduations see "How to order graduations" (see page 594)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

Graduations

"How to order"

Graduations can be laser-engraved on the plain surface of the control knobs and on plain flanges with high-precision and perfect readability. The graduations, consisting of marks and numbers, are available as indicated in the diagram here below.
All the graduations are available for minimum quantities that depend on the size of the knob and on the type of graduation chosen. These quantities are determined during the quotation analysis.

Graduations can be engraved on the following elements:

- GN 164 (see page 592)
- GN 726.1 (see page 600)
- GN 726.2 (see page 601)
- IZP. (see page 608)
- IZN.380 (see page 606)
- F.N - F.K. -F.GS (see page 609)
- GN 264 (see page 597)
- GN 436.1 (see page 603)
- GN 723.4 (see page 604)
- GN 736.1 (see page 617)
- GN 727 (see page 620)
- GN 200 (see page 622)
- GN 700 (see page 624)

To create graduations on other elements, special graduations, symbols or personalisations, please contact the ELESA+GANTER sales departments.

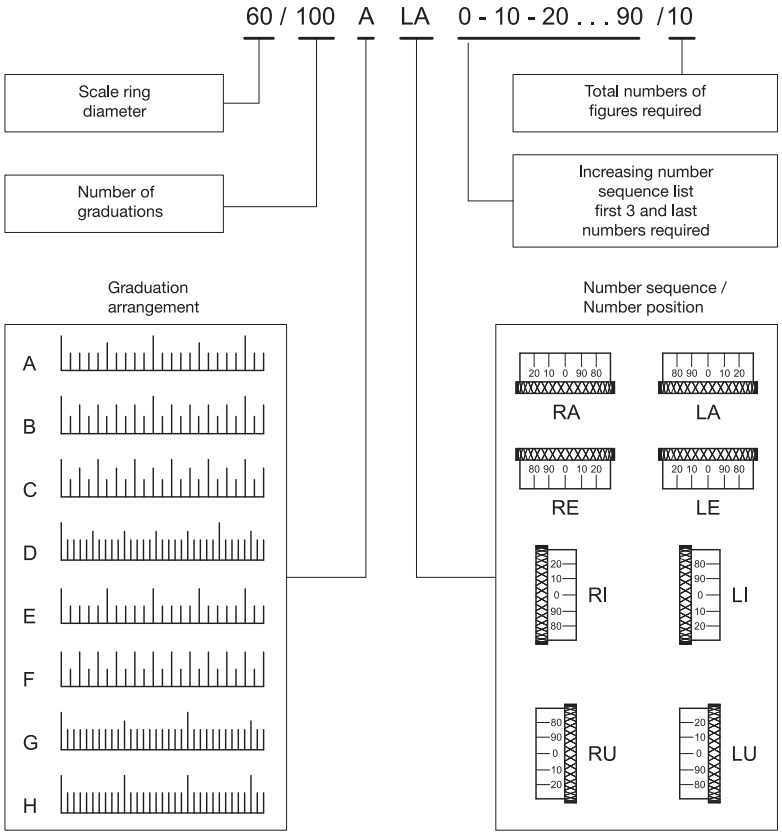
Graduation examples

Order example

How to order a graduation on a scale ring GN 164 knob with:
- diameter 60 mm
- 100 marks
- graduation type A
- sequence/graduation position type LA
- figures engraved from 0 to 90 for a total of 10 numbers.

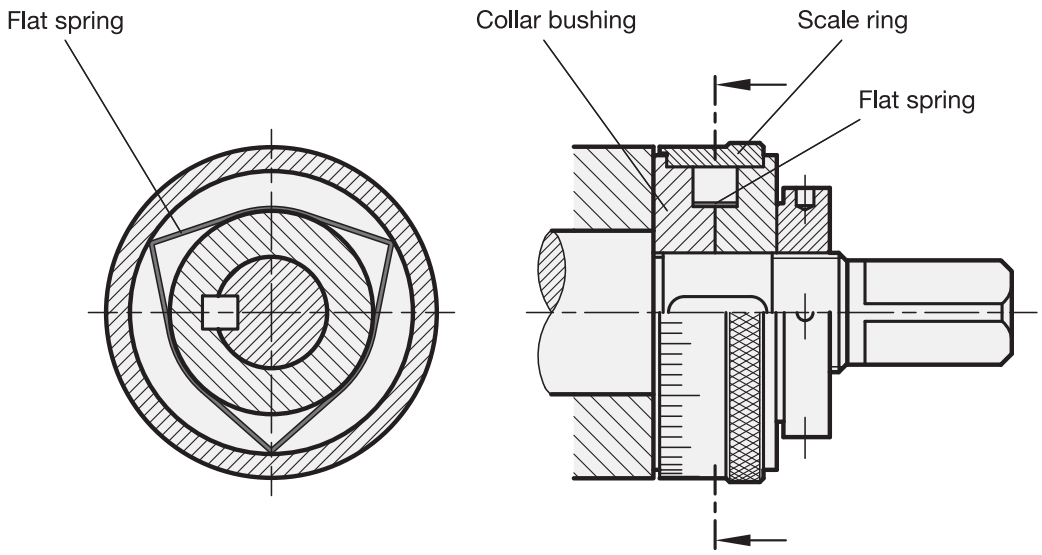
Information

The size of numbers and length of graduations depend on the number of graduations, quantity of numbers and the scale ring diameter.



Scaling sets

Assembly and installation example



A complete scale set is composed of:

1 Scale ring	2 Collar bushings	3 Flat springs
GN 264-30	GN 268-24-K12	GN 374-0,3-10
GN 264-40	GN 268-32-K12	GN 374-0,4-10
GN 264-40	GN 268-32-K14	GN 374-0,4-10
GN 264-40	GN 268-32-K16	GN 374-0,4-10
GN 264-60	GN 268-50-K12	GN 374-0,6-10
GN 264-60	GN 268-50-K16	GN 374-0,6-10
GN 264-60	GN 268-50-K20	GN 374-0,6-10
GN 264-60	GN 268-50-K28	GN 374-0,6-10
GN 264-80	GN 268-68-K12	GN 374-0,8-10
GN 264-80	GN 268-68-K14	GN 374-0,8-10
GN 264-80	GN 268-68-K16	GN 374-0,8-10
GN 264-80	GN 268-68-K22	GN 374-0,8-10

Information

The scale set is used for the precision setting of all machine components which are adjustable via spindles.

All individual parts are made of steel. The flat springs are a perfect and virtually non-wearing connecting link between scale ring and spindle or collar bushings. When adjusting the spindle, they ensure that the scale ring is safely driven without impairing the setting options of the ring when the shaft is at rest.

The individual parts belonging to a scale set must be ordered separately.

Flat springs

Accessories for scaling sets

SPECIFICATION

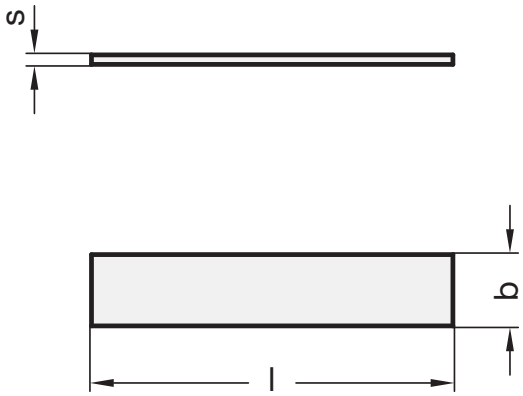
Steel
blank

INFORMATION

Flat springs GN 374 present an ideal and practical connection piece between scale ring and shaft resp. collar bushes.
When adjusting the shaft, the flat springs guarantee the move of the scale ring without affecting the possibility of adjustment of the scale ring when the shaft does not turn.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)



GN 374

Description	s	b	l	⚖
GN 374-0,3-10	0.3	10	21	1

GN 264

Graduated rings

Steel, matt chrome plated / blank

SPECIFICATION

Types

Type **MCR**: matt chrome plated
Type **MCRS**: matt chrome plated, standard scale 0...90, 100 graduations, acc. scale scheme d1/100 A RA 0-10-20...90/10

Steel

- Scale lug d1 fine turned
- blank (standard version)
- matt chrome plated **MCR**
- matt chrome plated with standard scale **MCRS**

Scale
engraved with laser precision, black

INFORMATION

Besides the standard scale (Type MCRS) the scale rings can be supplied with any type of graduation. It is suggested to use the matt chrome plated version (MCR) so that a nice discrepancy in colour is given.
Regarding design, numbering run, numbering position and numbering sequence of the scale please see the layout for scale rings on the order sheet "How to order Graduations" (see page 594).

ON REQUEST

- special graduations see "How to order graduations" (see page 594)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

GN 726

Knurled Control knobs

Aluminium

SPECIFICATION

Types

- Type **N**: Cover neutral
- Type **M**: Cover with indicator point

Identification no.

- No. **1**: with grub screw
- No. **2**: with collet

Aluminium
anodized, black

Cover
Plastic, light grey

Collet / hexagon nut
Brass

Stainless Steel-Grub screw DIN 916
with internal hexagon and serrated point

INFORMATION

The light grey cover of the control knobs GN 726 shrouds the fixing components as well as the shaft end. The cover also lends itself for a logo or other symbols.
Made from an aluminum extrusion allows the manufacture of **customized solutions** in existing diameters at relatively low cost.

TECHNICAL INFORMATION

engraved with laser precision

Stainless Steel-Grub screw DIN 916
with internal hexagon and serrated point

INFORMATION

Control knobs GN 723.4 can be combined with reference flanges GN 723.3 which offer the following advantages:
- they are provided with a reference mark relating to the scale on the control knobs
- they give additional support to the control shaft.
- the version with a friction ring prevents unexpected movement through vibration.

Scale and arrow on the control knobs are indelibly marked and easily legible. Besides the standard scale (Type S) they can be supplied with any type of graduation.
Regarding design, numbering run, numbering position and numbering sequence of the scale please see the layout for scale knobs on the order sheet "How to order graduations" (see page 594).

ACCESSORY

- Reference flanges GN 723.3 (see page 605) are to be ordered seperately)

ON REQUEST

- special graduations see "How to order graduations" (see page 594)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

SPECIFICATION

Types

- Type **A**: with fricition ring
- Type **B**: without friction ring

Aluminium
anodized, black

Reference arrow
white, engraved with laser precision

Clamping ring
Rubber

Friction ring
Polyamide

INFORMATION

Reference flanges GN 723.3 are used together with control knobs GN 723.4 which offer the following advantages:
- they have a reference mark to line up with the control knob scale,
- they offer additional support for the control shaft.
- the version with friction ring prevents an unexpected movement of the control knob by vibration.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

IZN.380

RoHS PA POM +130° -30°

Knurled control knobs

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, glossy finish.

BOSS CAP
Acetal resin based (POM) technopolymer, light-grey colour, push-fit assembly, removable by pressing on the outer edge (ELESA original design).

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole.
Assembly by means of a keyway or a transversal pin in the semi-machined hole f or a set screw (redrill and tap hole f).
- **IZN.380:** plain knob.
- **IZN.380+K:** knob with matte anodised aluminium flange, triangular black index.
- **IZN.380+FGS:** knob with matte anodised aluminium flange, black graduation (marks and numbers).
  - FGS 10/40 = 40 marks, numbering from 0 to 9 increases as the knob is turned clockwise.
  - FGS 10/100 = 100 marks, numbering from 0 to 9 increases as the knob is turned clockwise.

For other numbering (see Graduations on page 594).

ELESA Original design if79

ACCESSORIES ON REQUEST
Ball and spring for clicking operation to be fitted in the assembly hole for knobs with diameter D ≥ 48 mm, available only for IZN.380, (see ball and spring MS. on page 610).

SPECIAL EXECUTIONS ON REQUEST
On the surface of the boss cap words, marks, graphic symbols, etc... can be tampoprinted in colours.

Knurled control knobs

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

SELF-ADHESIVE FRONT PLATE
Anodised aluminium

STANDARD EXECUTIONS
Plain blind hole. Assembly by means of a supplied stainless steel transversal grub screw UNI 5929 (grub screw with hexagon socket and cup end).
- **IZP.**: plain knob.
- **IZP+K**: knob with triangular index.
- **IZP+GS**: knob with standard graduation, 20 marks, numbering from 0 to 9 increases as the knob is turned clockwise.

Laser-engraved precision graduations.

SPECIAL EXECUTIONS ON REQUEST
The front plate can be customized with words, marks, graphic symbols, etc.
On the plain surface of the knob high precision graduations (see Graduations on page 594) can be laser-engraved.

ELESA Original design

Flanges for graduations

for IZN. 380 control knobs

MATERIAL
Matte anodised aluminium.

MOUNTING
By means of three supplied self-tapping rivets for fitting to control knobs IZN.380 (see page 606).

STANDARD EXECUTIONS
- **F.N**: plain flange.
- **F.K**: flange with triangular black index.
- **F.GS**: flange with black graduation (marks and numbers).
  - **F.36 GS e F.40 GS**: 40 marks, numbering 0, 1, 2 .... 9 increases as the knob is turned clockwise.
  - **F.45, 50, 56, 63 GS**: 100 marks, numbering 0, 1, 2 .... 9 increases as the knob is turned clockwise.

SPECIAL EXECUTIONS ON REQUEST
On the surface of the flanges other kinds of precision graduations can be laser-engraved (see Graduations on page 594), numbers, graphic symbols, etc.

Control knobs

Aluminium

SPECIFICATION

Aluminium
anodized, black

Indexing line
white, engraved with laser precision

Stainless Steel-Grub screw DIN 916
with internal hexagon and serrated point

INFORMATION

Control knobs GN 729 are usually selected for applications which require a limited movement within 180°.

With the aid of limiting pins which protrude into the circular groove the angle of rotation can be restricted. The bore d4 is for a spring plunger GN 614 (see page 847) to act as a simple detent.
The indexing line is indelible and visible from two sides.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

EGK.SOFT

Grip knobs

arranged for clicking operation

MATERIAL

High-resilience technopolymer coated with "soft-touch" thermoplastic elastomer (TPE), grey-black colour, matte finish.

CENTRE CAP

Glass-fibre reinforced polyamide based (PA) technopolymer in Ergostyle colours, matte finish. Provided with the supply, push-fit assembly, removable by a screwdriver.
Available also as accessory sold separately (see table ECB.).

Code	Description	Closing cap for
29672-*	ECB.G2-*	EGK.50
29673-*	ECB.G3-*	EGK.63

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS

Assembly by means of a keyway or a transversal pin in the semi-machined hole f or a set screw (redrill and tap hole f).
- **EGK.SOFT**: black-oxide steel boss, H7 reamed hole.
- **EGK-SST-SOFT**: AISI 303 stainless steel boss, H7 reamed hole.

FEATURES AND APPLICATIONS

The special four-concave-mark shape of the knob and the "soft-touch" elastomer coating allow the best grip during clicking operation even in the presence of oils, grease and sweat from the hand. Particularly suitable for fitness machines, disability aids, tools and machines for gardening and high-precision instruments.

ACCESSORIES ON REQUEST

Ball and spring for clicking operation to be fitted in the assembly hole (see ball and spring MS. on page 610).

INFORMATION

Control handwheels GN 736.1 are used for setting operations with low torque. Coarse setting is made by means of the cylindrical handle (fingertip grip) followed by fine setting using the knurled rim of the knob.
The model fitted with collet offers an absolutely reliable mounting on the shaft and at the same time allows an easy setting of the adjustable scale ring wheel. The scale is wear resistant and easily legible since the engraved alu coloured numbers contrast with the black anodized surface. Besides the standard scale (Coding S) the control handwheels can be supplied with any type of graduation.
Full details of the available graduations, numbering sequence, number position and type of scale see under "How to order graduations" (see page 594).

INFORMATION

Control knobs with adjustable spindle GN 727 allow precise adjustment or aligning i. e. of a positive stop. The spindle thread is without backlash.
The graduations on the control knob are non-abrasive and well legible.
The light grey cover shrouds the fixing components as well as the shaft end.
Regarding design, numbering run, numbering position and mubering sequence of the scale please see the layout for scale rings on the order sheet "How to order graduations" (see page 594).

Version in Stainless Steel

Types

- Type **A**: without scale
- Type **AS**: with scale 0...50, 60 graduations

Stainless Steel AISI 303 **NI**

Type AS:

- Scale engraved with laser precision
- Reference line on locating ring

Keyway P9 DIN 6885 for bore > K 10 (Steel and Stainless Steel)

INFORMATION

Indexing mechanisms GN 200 replace and simplify complicated indexing and safety mechanisms.
Besides the standard scale (Type AS) the control knob version may be supplied with any scale. In such cases, it is recommended to use the matt chrome plated version since the colour contrast is better).
Regarding design, numbering run, numbering position and numbering sequence of the scale please see the layout for scale rings on the order sheet "How to order graduations" (see page 594).

ON REQUEST

- Special graduations see "How to order graduations" (see page 594)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Applications

With these indexing mechanisms, shaft and lead screws can be turned and positioned in steps of 6° or multiples of it.

Description

The indexing mechanism is a selfcontained unit, all the adjusting and securing components are housed in the smallest possible space. The unit consists of three main parts:

- Bushing – can be connected to the shaft with a key or crossdowel.
- Location ring – is screwed and doweled to the machine or equipment. The bushing is also a bearing for the location ring.
- Knurled housing – providing engagement between the locating ring and the shaft which can be turned or positioned.

In the locked position, the knurled housing via the internal teeth (60) connects the locating ring and the bush (both via external teeth), the latter being connected to the shaft. To turn the shaft, the knurled housing is pulled out against the spring pressure, disengaging from the location ring, but still engaged with the bush.

More information

- With 60 teeth, the following divisions can be achieved: 2, 3, 4, 5, 6, 10, 20, 30.A simple method provides indexing of the shaft to limited number of positions only, i.e. every 120°.For this purpose, the location ring is manufactured with a dowel which allows engagement only when the bushing is provided with a corresponding hole (see assembly examples).This hole can be manufactured oversize as the dowel is for rough positioning only. Accurate positioning is maintained via the teeth.Knurled housing and tension levers can be supplied with scales and symbols.With teeth, a more accurate and wear-resistant indexing mechanism is obtained than with single dowel locations.When a very high torque is to be transmitted, engaging and disengaging of the teeth is made difficult due to the small clearance, i.e. the friction between them. In such cases, indexing levers GN 215 are recommended.

GN 200

- centered between two mounting holes

INFORMATION

With this adjustable knob GN 700 a shaft can be infinitely adjusted in both directions. The anti-backlash mechanism with a max. load of 15 Nm ensures the firm locking of the shaft in any position.
This mechanism prevents any uncontrolled movement of the shaft. The locking action is a safety feature to prevent unwanted re-adjustments caused by backlash and vibration.
Scale and arrow on the control knobs are indelibly marked and easily legible.
Besides the standard scale (Type AS) the control knob version may be supplied with any other scale (Type KS).
Regarding design, numbering run, numbering position and numbering sequence of the scale please see the layout for scale rings on the order sheet "How to order graduations" (see page 594).

ON REQUEST

- special graduations see "How to order graduations" (see page 594)

TECHNICAL INFORMATION

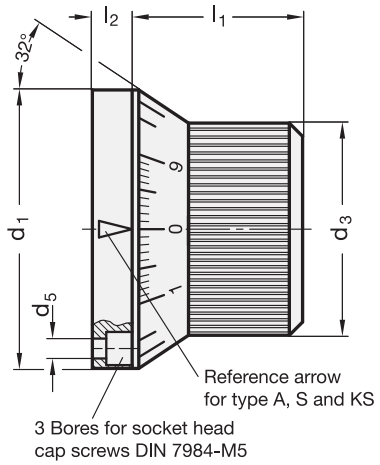
- ISO-Fundamental Tolerances (see page A21)

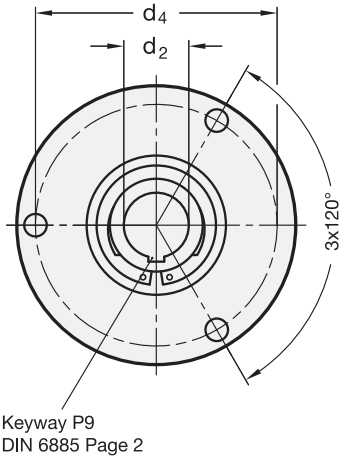
Description

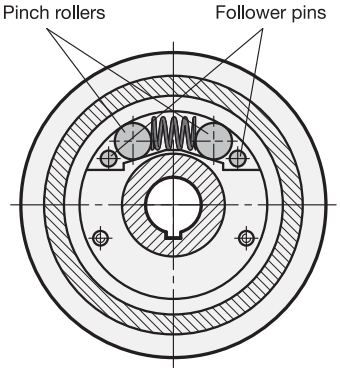
The anti-backlash mechanism which operates on the principle of a bidirectional freewheeling and antireversing basis allows the transfer of movement in both directions without backlash. The adjustable knob is not suitable for applications on machines or equipments which are exposed to vibrations.
The **bush** is connected by the key and keyway to the revolving shaft.
The **location ring** remains static and centrally positioned by the bushing and the two pinch rollers, fixed to the machine frame or housing by three screws.
The **rotating knob** with the knurled barrel is carried by the bush.
The **scale ring** is firmly anchored to the bush and the driven shaft by two countersunk screws.
If the knob is repositioned, one of the follower pins – depending on the direction of rotation – pushes the pinch roller against the spring into an idling position which releases the bush and shaft to rotate freely.
The second follower pin on the opposite side reduces the movement of its pinch roller and ensures at the same time a firm grip and forward movement of the bush while the first pinch roller remains in an idling position.
When releasing the knob, the spring will push the pinch roller back into the grip position, thus linking the bush again with the static section.
The scale ring is connected firmly with the bush and any readjustment of the shaft can be accurately controlled.
This infinitely adjustable knob cannot, however, be used in such cases where the shaft to be adjusted runs ahead of the adjustment.
The anti-backlash mechanism in this knob cannot be used as a bearing for the driven shaft.

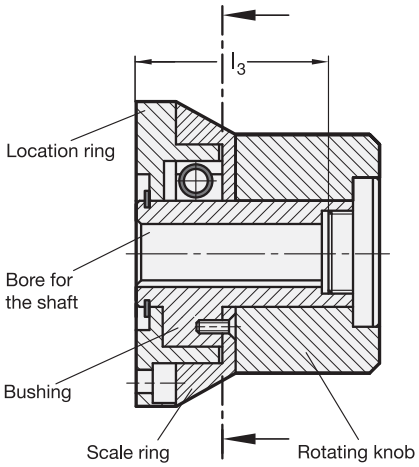
Hints for installation

A perfect functioning can only be guaranteed if the shaft of the machine is positioned at a perfect right angle to the contact surface of the static part.









GN 700

Control levers

Steel, blackened

SPECIFICATION

Types

- Type **M**: Cover with indicator point
- Type **N**: Cover plain

Steel
blackened

Cover
Plastic, light grey

Cylindrical knobs
Plastic, Duroplast
black

INFORMATION

The cover hides fasteners (see assembly instructions) and provides a printing facility for any symbol or logo.
On assembly, the cover is pushed in by hand and can be removed with a screw driver via a suitable slot.
Control levers GN 750 can also be supplied as standard with:
Square DIN 79 **V** + Bore diameter
Keyway DIN 6885 **K** + Bore diameter

ON REQUEST

- Control lever versions of the assembly examples

TECHNICAL INFORMATION

- Cross holes GN 110 (see page A17)
- Keyway P9 DIN 6885 (see page A16)
- ISO-Fundamental Tolerance (see page A21)

ASSEMBLY EXAMPLES

Control lever GN 750 with spring-loaded ball, GN 614 (see page 847) version brass (MS) or plastic (KU), fitted to the shaft with a dowel pin.
The spring-loaded ball provides a simple indexing assembly, the location indent can be spotted through the control lever hub.
The shaft end and the screw of the indexing ball are hidden by the plastic cover.

Control lever GN 750 with keyway and countersunk washer GN 184 (see page 971) for positive lateral location and with a radial slot and dowel pin providing angle limitations.

Control levers

arranged for clicking operation, technopolymer

LEVER BODY
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, glossy finish.

LEVER ARM
Matte chrome-plated steel with cylindrical handle I.280 (see page 568) in Duroplast.

SELF-ADHESIVE FRONT PLATE
Matte anodised aluminium to be fitted after the assembly of the lever.

STANDARD EXECUTIONS
- **LBR-A:** black-oxide steel boss, H7 reamed hole.
- **LBR-N:** without boss, with plain hole and flat face.

LBR.45 N and LBR.54 N: flat face opposite to the arm.
LBR.75 N: flat face in correspondance of the arm.

MANOEUVRE ANGLE LIMITATION
A limited manoeuvre angle is possible by fitting stop pins in the rear guide slot.

ACCESSORIES ON REQUEST
- Axial retaining washer GN 184 (see page 971).
- Ball and spring for clicking operation to be fitted into the two holes d3 drilled at 180° (see ball and spring MS. on page 610).

SPECIAL EXECUTIONS ON REQUEST
- Different arm lengths and handle shapes.
- Front plate with words, marks, symbols, graphics.

Control levers

arranged for clicking operation, technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

BOSS CAP

Technopolymer, matte finish, push-fit assembly, removable by a screwdriver, included in the supply.
Available also as accessory sold separately (see table ECB.).

Code	Description	Boss cap for
29551-*	ECB.T1-*	ELC.67
29552-*	ECB.T2-*	ELC.85
29553-*	ECB.T3-*	ELC.110
29554-*	ECB.T4-*	ELC.140

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTIONS

- **ELC:** black-oxide steel boss, H7 reamed hole, cap in the Ergostyle colours.
- **ELC-FC3**: black-oxide steel boss, H7 reamed hole, cap in RAL 7035 light grey colour, with arrow indicator.
- **ELC-SST:** AISI 303 stainless steel boss, H7 reamed hole, cap in the Ergostyle colours.
- **ELC-SST-FC3**: AISI 303 stainless steel boss, H7 reamed hole, cap in RAL 7035 light grey colour, with arrow indicator.

ERGONOMY

Rotations are performed smoothly and powerfully thanks to the heavy-duty arm of the lever, while the enlarged and sunken semispherical end offers an effective grip.

MANOEUVRE ANGLE LIMITATION

A limited manoeuvre angle is possible by fitting stop pins in the rear guide slot.

- Axial retaining washer GN 184 (see page 971).
- Ball and spring for clicking operation to be fitted into the two holes d3 drilled at 180° (see ball and spring MS. on page 610).

Control lever

arranged for clicking operation, technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

BOSS CAP
Technopolymer in the Ergostyle colours, matte finish. Supplied, push-fit assembly, removable by a screwdriver.
Available also as accessory sold separately (see table ECB.).

Code	Description	Boss cap for
29553-*	ECB.T3-*	ELCR.118

* Complete with colour index (C1, ..., C6).

STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole

FEATURES AND APPLICATIONS
Control levers ELCR. have a straight lever, parallel to the clamping surface. Particularly suitable when the lever turning angle is limited owing to lack of space.

ERGONOMY
Rotations are performed smoothly and powerfully thanks to the heavy-duty arm of the lever, while the enlarged end offers an effective grip.

MANOEUVRE ANGLE LIMITATION
A limited manoeuvre angle is possible by fitting stop pins in the rear guide slot.

ACCESSORIES ON REQUEST
- Axial retaining washer GN 184 (see page 971).
- Ball and spring for clicking operation to be fitted into the two holes d3 drilled at 180° (see ball and spring MS. on page 610).

Indexing levers

SPECIFICATION

Types

- Type **A**: without serrations
- Type **B**: with 30 serrations

Steel
blackened

Cover Plastic
black, with inserted Alu-disc
matt anodized, natural colour

Keyway for bore
K10: 3 P9 x 1.1
K12 ... K16: DIN 6885/2

Ball knob DIN 319 (see page 538)
Plastic, Duroplast
black, shiny finish

INFORMATION

With indexing levers GN 215 shafts can be turned through a predetermined angle and positively locked. To index, lift the lever against spring pressure from serrations (one hand control).
The **bush** is connected to the shaft via keyway.
The **location flange** is bolted to the machine with two socket head cap screws (M 5).
The **lever**, via the location pin, provides the connection between shaft and location flange).
The serrations are protected from swarf and similar particles by the cover. This cover can be inserted by hand (elastic segments engage into a groove) and removed with a screw driver.

ON REQUEST

- Serrations, restricted angle to drawing

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

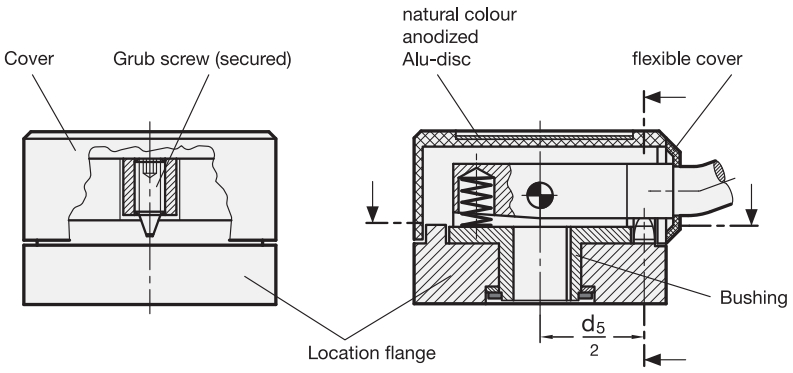
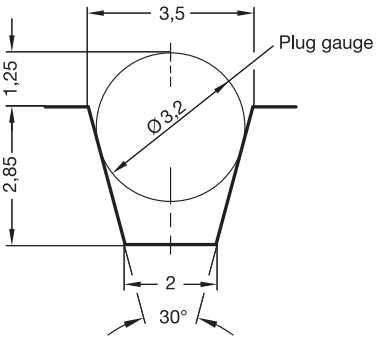
TECHNICAL AND ASSEMBLY INSTRUCTIONS

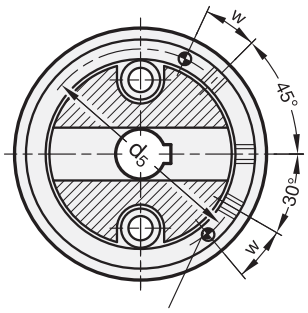
The location pin is a wedge-type as standard, which guarantees backlash-free positioning and also acheiving easy engagement and disengagement. Special serrations and dowel pins which restrict the indexing angle can be produced to customers requirement. Please ask for a quotation.
If backlash-free positioning is not required, a dowel pin (made from a grub screw) can be used. The serrations can be made square or with dowels and suitable holes. Such holes have to be made large enough to ensure that the dowel is not restricted on engagement (lever swivel radius).
Smallest available angle for special serrations:
Size 54 - 11°
Size 60 - 9°
Smaller angles can be acheived with suitable serrations and dowels.
Milling cutter for standard serrations can be supplied.



Enlargement of serrations
with plug gauge to aid checking



Example with
three serrations and restricted indexing angle



Dowel pin ISO 8750 Ø 3,5 x 7 mm protruding
(only applicable when restricted indexing angle is required)
w = angle from serration (lever position)

Description	⚖
GN 711.3-AL-1	1

Linear slides

Structure

All linear slides consist of an outer rail with a runner moving inside. Anti-friction bearings, kept at a distance and in position by means of a ball cage, lie between the rail and the runner.

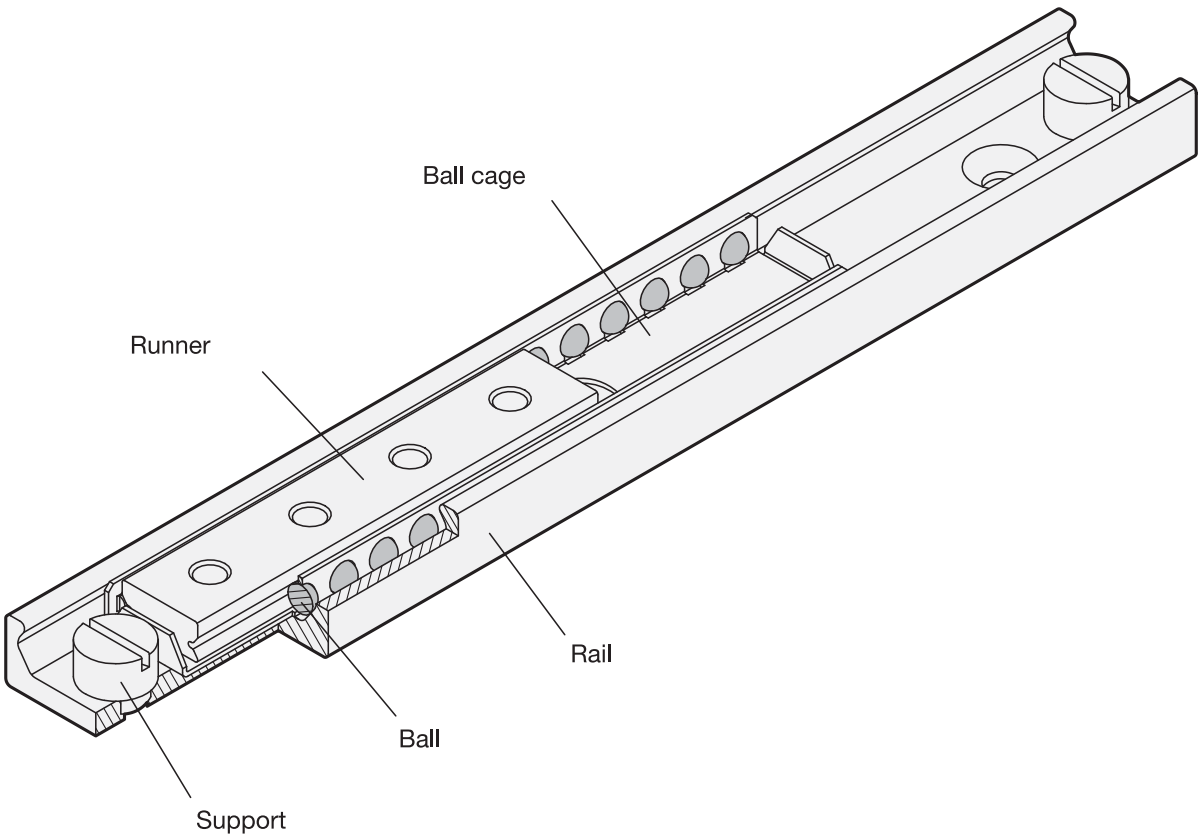
Rail and runner are made of heat treatable steel, enabling their use in industrial environments with higher requirements in terms of load rating, quiet operation and useful service life.

All designs are available in the nominal rail dimensions h_1 = 28, 35 and 43 mm and may also be supplied beyond the standard range in lengths from 130 mm to 1970 mm, appropriate for individual requirements.

Linear slides are normally adjusted so that a clearance-free (i.e. moderately pre-stressed) match-up is created between rail and runner. The raceways of the rails and runners are induction hardened, which combined with the antifriction bearings results in lower wear and longer service life. Linear slides are permanently lubricated with a high-grade special grease designed for linear guide rail systems.

Depending on requirements, a variety of different types are available. Sliding distances of the runners are inside, partly outside or entirely outside the length of the rails. Fully extendable telescopic linear slides consist of linear slides directly interconnected at the rails, the runners or with the help of an intermediate profile.

To mount linear slides, countersinks in the rails and, depending on type of construction, threaded or countersunk holes in the runners are available. The compact style is generally advantageous for use in tight spaces.



Linear slides

Types

Linear slides with inside traversal distance **GN 2402** (see page 644)		Telescopic linear slides with partly outside traversal distance (partial extension) **GN 2404** (see page 645)		Telescopic linear slides with S-shaped intermediate profile (full extension) **GN 2406** (see page 646)		Telescopic linear slides with rails connected in H-shape (full extension) **GN 2408** (see page 647)		Telescopic linear slides with runners connected in dual configuration (full extension) **GN 2410** (see page 648)

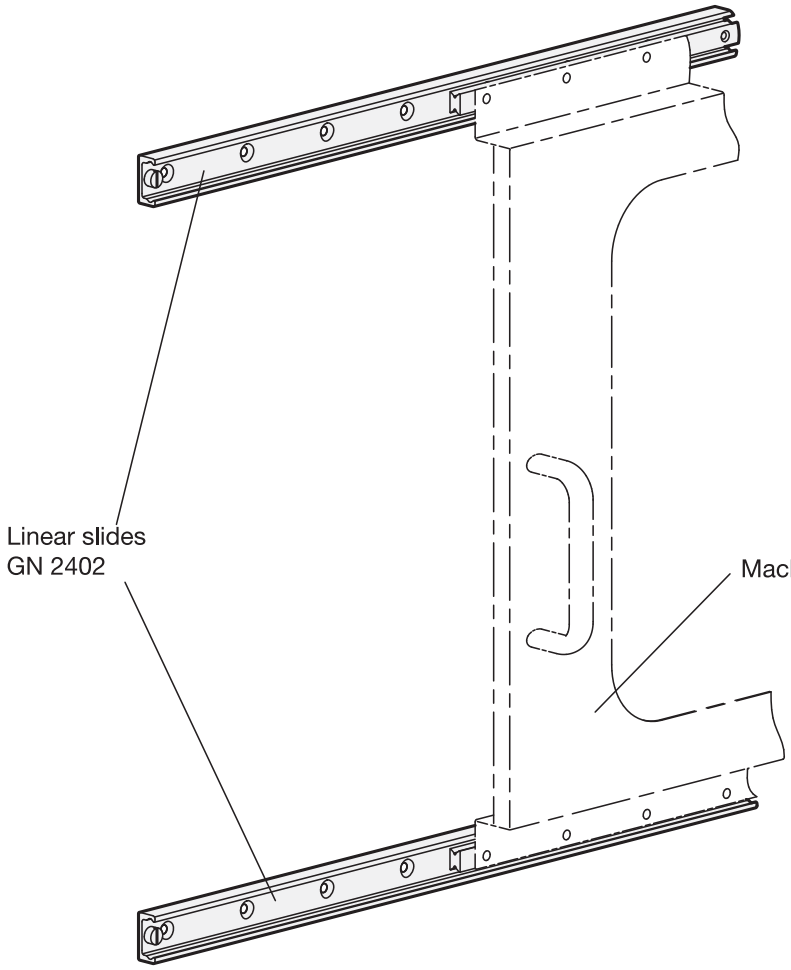
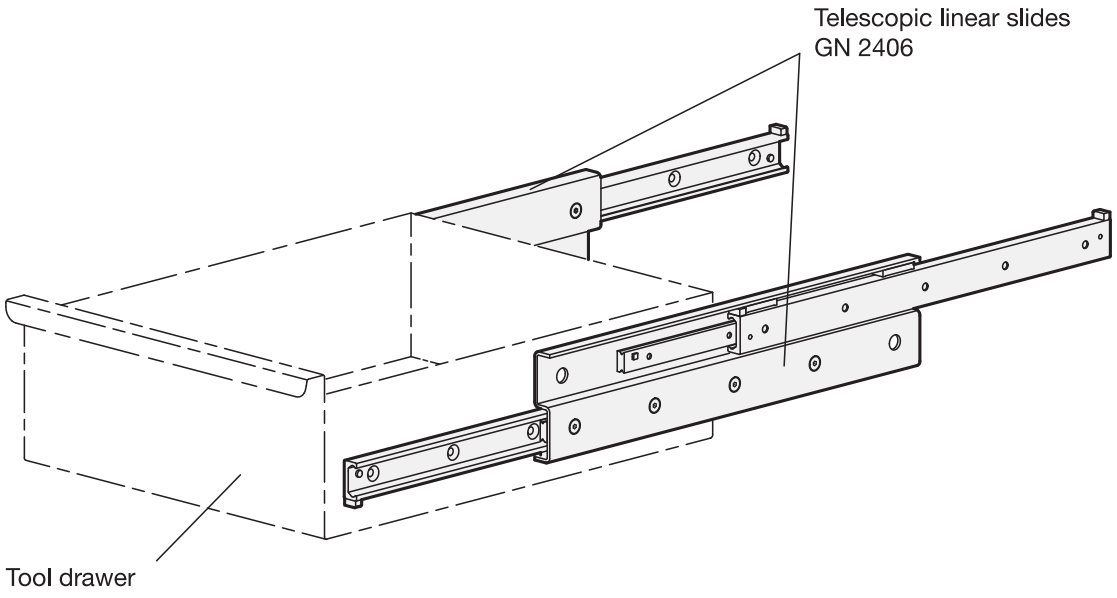
Assembly examples





GN 2402

Linear slides

with no extension

SPECIFICATION

Rail / Runner
Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened

Balls
Anti-friction bearing steel, hardened

Ball cage
Steel, zinc plated

INFORMATION

Linear slides GN 2402 are also known as linear motion bearings. They are used, for example, for storage drawers and sliding doors, or in jigmaking for a sliding motion in a linear direction.
The sliding distance of the runner lies within the length of the rail l1. External elements should limit the maximum sliding distance; the supports of the rail have been designed to guard against the inadvertent extraction of the runner from the rail.

- Load rating and information to linear guide rail systems (see page 649)

ON REQUEST

- other lengths (based on the standard lengths grid dimension of 80 mm)
- Special lengths (bore, start and end distances)
- more than runner, special cages

GN 2404

Telescopic linear slides

with partial extension

SPECIFICATION

Rail / Runner
Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened

Balls
Anti-friction bearing steel, hardened

Ball cage
Steel, zinc plated

INFORMATION

Telescopic linear slides GN 2404 are used, for example, for storage drawers and sliding doors, or in jigmaking for a sliding motion in a linear direction.
If the support screw is removed on both sides, the sliding distance extends the length of the rail plus an additional distance of slightly more than half the length of the rail.
External elements should limit the maximum sliding distance; the supports of the rail have been designed to guard against the inadvertent extraction of the runner from the rail.

- Load rating and information to linear guide rail systems (see page 649)

ON REQUEST

- other lengths (based on the standard lengths grid dimension of 80 mm)
- Special lengths (bore, start and end distances)

GN 2406

Telescopic linear slides

with one side extension, S-shaped

SPECIFICATION

Type

Type **E**: with one side extension

Rail / Runner
Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened

Balls
Anti-friction bearing steel, hardened

Ball cage
Steel, zinc plated

Intermediate metal sheet of the ball cage
Steel, zinc plated

INFORMATION

Telescopic linear slides GN 2406 consist of two slides linked by an intermediate profile. They are used when the lateral space requires a small width, and when large extension is required. The S-shape of the intermediate profile gives the configuration a high degree of sturdiness.
The rails and the intermediate profile are equal in length. Both rails can be extended so that an extension is reached which is longer than the base length l_1.
External elements should limit the maximum sliding distance; the supports of the rail have been designed to guard against the inadvertent extraction of the runner from the rail.

- Load rating and information to linear guide rail systems (see page 649)

ON REQUEST

- other lengths (based on the standard lengths grid dimension of 80 mm)
- Special lengths (bore, start and end distances)
- Extensions on both side of each rail (Type D)

GN 2408

Telescopic linear slides

with H-shaped rail

SPECIFICATION

Types

- Type **GG**: Runner with thread, on both sides
- Type **DG**: Runner 1x with countersunk and 1x with thread
- Type **DD**: Runner with countersunk, on both sides

Rail / Runner
Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened

Balls
Anti-friction bearing steel, hardened

Ball cage
Steel, zinc plated

Rail connection

- Blank rivets, Stainless Steel (h_1 = 28 and 35)
- Screws, Steel zinc plated (h_1 = 43)

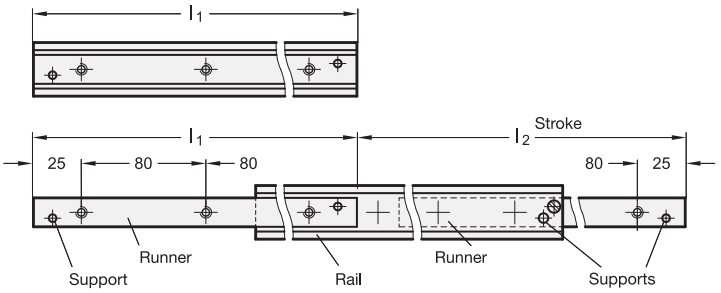
INFORMATION

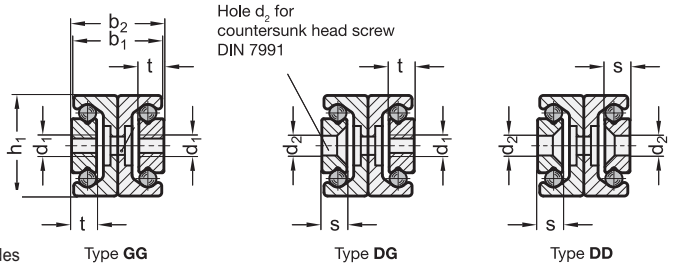
Telescopic linear slides GN 2408 consist of two interconnected linear slides. They are used, for example, in handling or automation applications and in jigmaking, for straight-line traversal distance when large extension and a low construction height of the rail are required. The H-shape of the rails profile gives the configuration a high degree of sturdiness.
The rails and runners are equal in length. Both rails can be extended so that an extension is reached which is longer than the base length l_1. Removing the support screws from the rails allows a stroke of the runners on both sides.
External elements should limit the maximum sliding distance; the supports of the rail have been designed to guard against the inadvertent extraction of the runner from the rail.

- Load rating and information to linear guide rail systems (see page 649)

ON REQUEST

- other lengths (based on the standard lengths grid dimension of 80 mm)
- Special lengths (bore, start and end distances)





Type **GG** Type **DG** Type **DD**

*Complete with type index of the telescopic linear slide (GG, DG or DD)

Telescopic linear slides

with full extension, dual configuration

SPECIFICATION

Rail / Runner
Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened

Balls
Anti-friction bearing steel, hardened

Ball cage
Steel, zinc plated

Rail Connection
Screw Steel, zinc plated

INFORMATION

Telescopic linear slides GN 2410 consist of two linear motion ball slide rails connected at the runners. They are used, for example, in material handling or automation applications, or in jigmaking, to achieve a sliding motion in a linear direction when long extensions with low construction height of the rail are required.
The dual configuration has the advantage that both the radial and axial load capacities are identical. Meanwhile this design has proven less susceptible to dirt in practical use.
The rails and runner are equal in length. Both runners can be extended so that an extension is reached which is longer than the rail base length l_1. Removing the support screws from the rails allows an extension of the rails on both sides.
External elements should limit the maximum sliding distance; the supports of the rail have been designed to guard against the inadvertent extraction of the runner from the rail.

- Load rating and information to linear guide rail systems (see page 649)

ON REQUEST

- other lengths (based on the standard lengths grid dimension of 80 mm)
- Special lengths (bore, start and end distances)

Load rating of telescopic linear slides

in ascending order of the standard numbers

When selecting a suitable linear slide, it is primarily the available space, the desired stroke and the load carried which must be taken into consideration. The values listed below are intended as guidelines for selecting the most suitable nominal rail size.

The details on load rating are non-binding guide values given without liability and does not constitute any type of guarantee or warranty of its intended use. The user must determine in each individual case whether a product is suitable for the intended application. Environmental factors and aging may affect the stated values.

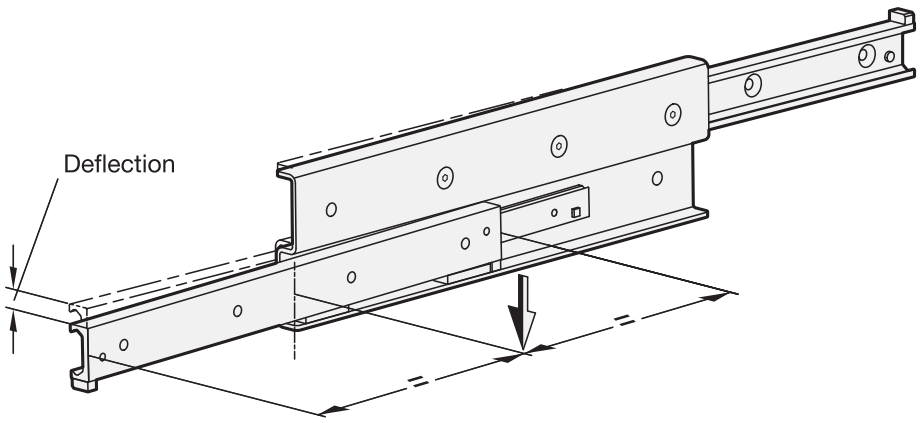
No details on the permissible load torques are given for the telescopic linear slides as these are normally used for paired applications. Loads of these dimensions occur to a minor degree because it may be assumed that the surrounding construction has sufficient rigidity and stiffness. Transferring load torques within certain limited is permitted.

Static load and deflection

The load values given in the tables refer to a maximum permissible force allowed to act in the middle of the fully extended profile rail at the third segment. If the given values are observed and if the telescopic linear slide is fully extended, a minor deflection (sag) occurs at the end of the runner or of the rail. This has normally no detrimental effect on the proper function of the application. If required, guide values may be given if requested.



Mounting screws, assignment of the mounting holes

The standard mounting hardware is DIN 7991-10.9 countersunk head screws, to be mounted with the recommended tightening torque. Depending on type, not all mounting holes may be utilized. In general, these holes can be left unused. In exceptional cases, especially in bilateral stroke, mounting holes can be accessed by loosening the support screws and by pulling out the runner. The support screws are then put back in place.

Traversal speed, cage slip

The traversal speed in linear slides can be as much as 0.8 m/s. The particular application and the installation length can have an effect on this value. In the event of rapid changes of direction and high accelerating forces, cage slip may occur in some cases, especially in long ball cages. In cases such as these, the cage does not move synchronously with half the speed of the runner, but gradually loses its correct position owing to the slip. Whenever possible, running a blank stroke to the end of the traversal distance should be provided for back positioning.

Linear guide rail systems

Structure

Linear guide rail systems allow the reliable and economical linear movement of hardware modules. Their outstanding attributes are low-maintenance operation, long service life and quiet running. These are attributes which make roller guide systems indispensable components for efficient and safe movement of devices, and meet the needs of facilities with low energy requirements.

The product range includes all components necessary for constructing linear guide rail systems that are compact and easy to assemble and install. All inear guide rail systems consist of one outer rail with rollers or roller carriages moving inside the rail.

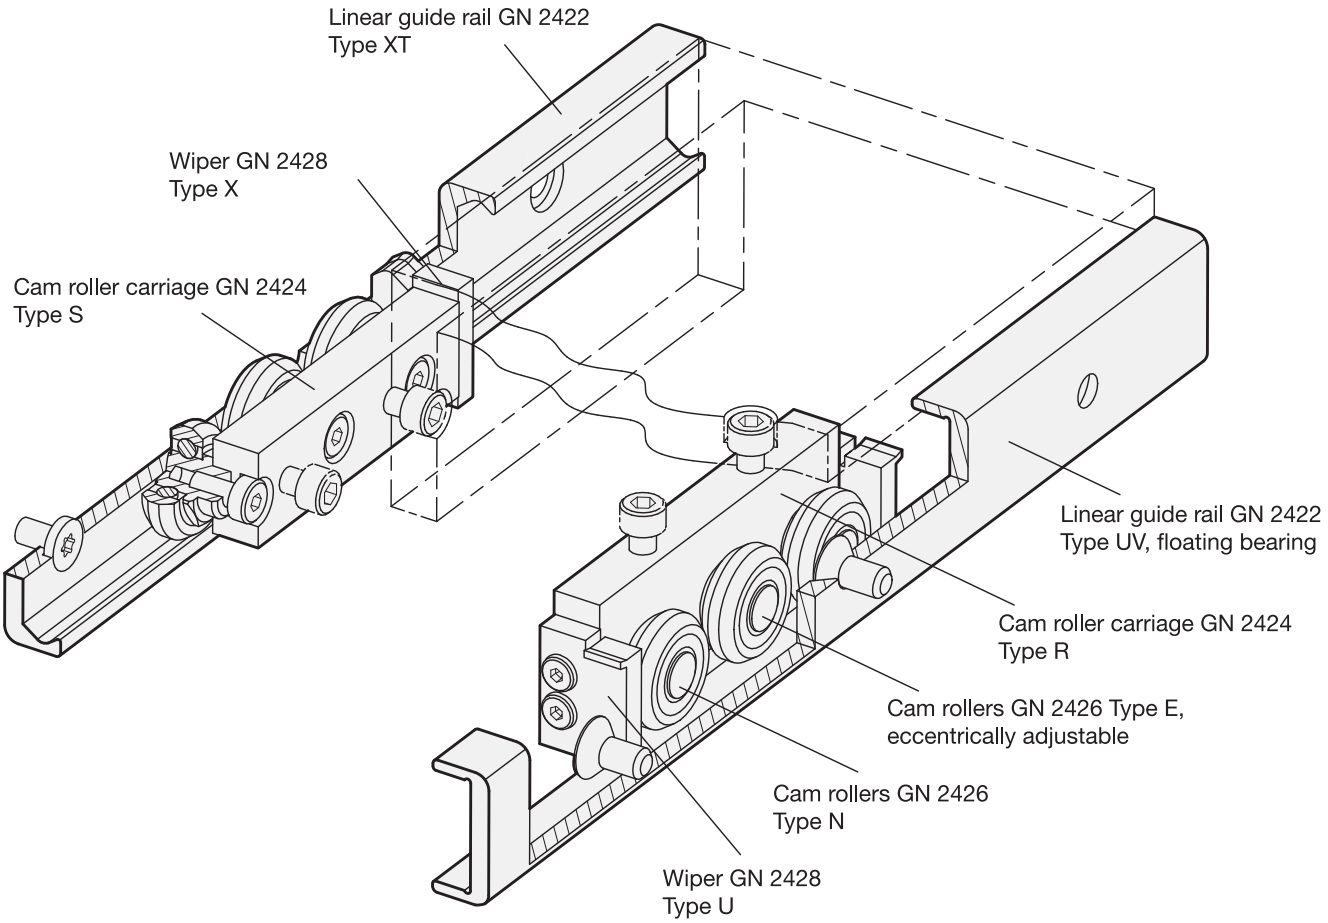
Rails are the foundations for linear guide rail systems. They can be constructed as fixed or floating bearing versions, with the fixed bearing type guiding the rollers running inside the rail on two levels, while the floating bearing type does so only on one level. By combining both versions, any misalignments or parallelism errors in the connected construction can be corrected. Complex preliminary work caused by the precision machining of surrounding parts can thus be kept to a minimum. Both rail versions can be mounted in one of two ways: cylindrical countersunk holes, or 90° conical holes for self-centering.

Cam roller carriages are available in 3 different types of designs, differing by their radial or axial assembly arrangement, their material, and their degree of sealing. All cam roller carriages consist of 3 rollers, with the middle one always supplied with an eccentrically adjustable bearing pivot for determining the initial tension or the clearance/play inside the rail. Depending on the rail version, a wiper is mounted on either end of the roller carriage.

Cam rollers are similar in structure to deep-groove ball bearings, with a non-detachable bearing pivot used as mounting point.

For special applications, cam rollers and wipers can also be supplied separately from the cam roller carriages under separate standards.

All design variants are available in the nominal rail dimensions h_1= 18, 28, 35 and 43 mm. Beyond the standard range, they can also be supplied in lengths of up to 3600 mm in one piece, or as combined rails for individual and customized requirements.



Linear guide rail systems

Components and extras

To insure maximum flexibility, linear guide rail systems are made from the components listed below. Depending on the requirement, the appropriate components can be supplied in the desired quantity. Because the linear guide rails and the cam roller carriages must be assembled separately in many applications, these items will be supplied unassembled and packed separately.

Upon request, fully pre-assembled linear guide rail systems including rails GN 2422 and cam roller carriages GN 2424 are available.

Cam roller linear guide rails **GN 2422** (see page 654)	Cam roller carriages for rails **GN 2424** (see page 656)	Cam rollers for rails **GN 2426** (see page 658)	Wipers for rails **GN 2428** (see page 659)	
Linear guide rail systems

Cam roller linear guide rails

for linear guide rail systems, C-profile

SPECIFICATION

Types

- Type **UT**: Floating bearing rail, with mounting hole for flat head screw
- Type **UV**: Floating bearing rail, with mounting hole for countersunk screw
- Type **XT**: Fixed bearing rail, with mounting hole for flat head screw
- Type **XV**: Fixed bearing rail, with mounting hole for countersunk screw

Heat treatable steel

- zinc plated, blue passivated
- Raceways hardened, ground

Flat head screws (only for type UT / XT)
Steel, zinc plated, blue passivated

INFORMATION

Cam roller linear guide rails GN 2422 can be combined with cam roller carriages GN 2424 or cam rollers GN 2426 to construct linear guide rail systems. These space-saving units are used, for example, for carrying sliding doors, or in mechanical engineering or jigmaking for the linear movement of plant equipment.
These systems feature high stability and quiet running at high traversal speeds. Thanks to the option of combining fixed and floating bearing rails, they cause no great stress to the surrounding construction, and thus allow parallelism errors to be compensated for. Flat head screws with low head are included with the rail types UT and XT.

Weight type UT

Cam roller carriages

for cam roller linear guide rails GN 2422

SPECIFICATION

Types

- Type **N**: Normal roller carriage, central arrangement
- Type **R**: Radial roller carriage, lateral arrangement
- Type **S**: Narrow roller carriage, central arrangement

Version

- Version **U**: with wiper for floating bearing rail (U-rail)
- Version **X**: with wiper for fixed bearing rail (X-rail)

Base body

- Aluminium (Type N)
- Steel, zinc plated, blue passivated (Type R / Type S)

Rollers

- Anti-friction bearing steel, hardened
- Ball mounted, sealed (2RS)
- permanent lubrication

Wiper

- Plastic, PUR, grey
- Steel insert, zinc plated

INFORMATION

Cam roller carriages GN 2424 are combined with cam roller linear guide rails GN 2422 (see page 654) to build linear guide rail systems. They are used in mechanical engineering or jigmaking for the linear movement of plant equipment.
Depending on cam roller carriage type, these can be mounted in axial or radial direction to the roller axes. Also depending on rail type, matching wipers are mounted, with type N featuring additional sealing lips in longitudinal direction.

- Linear guide rail systems (see page 660)

ON REQUEST

- Cam roller carriages with more than 3 rollers
- other roller arrangements

ASSEMBLY INFORMATION

The initial tension or the clearance of the cam roller carriage in the rail can be determined during assembly. Both outer rollers carry the cam roller carriage, with the middle roller (for eccentric adjustment) supporting the carriage on the opposing rail side. Detailed assembly instructions and the necessary tool are included with every cam roller carriage.

If required, the open-end wrench may also be ordered seperately GN 2424.1 with two sizes being available:
A/F_1 / A/F_2 = 8 for construction size with h_1 = 18, Article no. **GN 2424.1-8-8**
A/F_1 = 13 and A/F_2 = 15 for construction size with h_1 = 28 / 35 / 43, Article no. **GN 2424.1-13-15**

Cam rollers

for cam roller linear guide rails GN 2422

SPECIFICATION

Types

- Type **B**: Roller with bore
- Type **N**: Normal roller with centered bearing mounting point
- Type **E**: Eccentric roller with eccentric bearing mounting point

Roller

- Anti-friction bearing steel, hardened
- Dust and splash water protected
- permanent lubrication

Sealing disc
Plastic NBR **2RS**

Bearing pivot
Steel zinc plated, blue passivated

INFORMATION

Cam rollers GN 2426 are combined with cam roller linear guide rails GN 2422 (see page 654) to build individual and space-saving linear guide rail systems.
Outer rim surfaces of the rollers are slightly convex, so that in conjunction with the correspondingly-shaped bearing rails (Type XT or XV) there is an accurate and smooth run across four contact points. The same applies to floating bearing rails (Type UT or UV), but with only two contact points.
Combined with the rail, clearance freedom or the initial tension of several rollers can be determined during assembly by using the adjustable eccentrical roller (Type E). The required open-end wrench GN 2424.1 (see page 656) is available seperately.
The sealed and permanently lubricated rollers guarantee long service life and superior running performance.

- Linear guide rail systems (see page 660)

ON REQUEST

Sealing discs, sheet metal profile with gap seal (2Z)

GN 2428

Wipers

for cam roller linear guide rails GN 2422

SPECIFICATION

Types

- Type **U**: for floating bearing rails
- Type **X**: for fixed bearing rails

Wiper
Plastic PUR, grey

Bracing core
Steel, zinc plated

Cylinder head screw DIN 912
Steel zinc plated, blue passivated

INFORMATION

Wipers GN 2428 protect against dirt deposits on rails and rollers.
For size h_1 = 18 the wiper is attached with only one central screw.
Screws are included parts of the order.
- Linear guide rail systems (see page 660)

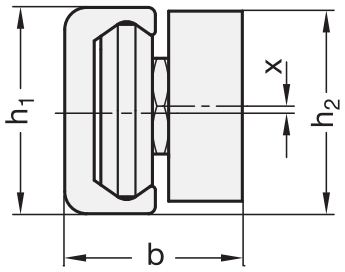
Tolerance for mounted linear guide rail systems

In the combination of rails GN 2422 (see page 654) and cam roller carriages GN 2424 (see page 656), the following dimensions / tolerances exist.

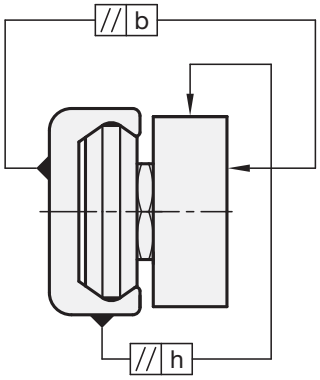
If several cam roller carriages are installed into one rail, an offset x can occur between the cam roller carriages which must be added to the dimension h_2.

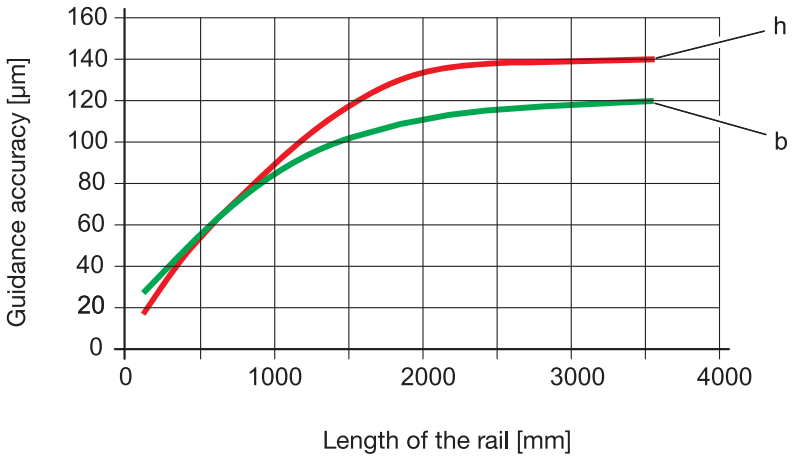


h1	b	h2	x
18 +0.25/-0.10	+0.15/-0.16	+0.25/-0.25	±0.20
28 +0.25/-0.10	+0.25/-0.10	+0.15/-0.35	±0.20
35 +0.35/-0.10	+0.25/-0.10	+0.10/-0.30	±0.20
43 +0.36/-0.10	+0.25/-0.10	+0.20/-0.35	±0.20

Guidance accuracy

Linear guide rail systems feature the linear guidance accuracy shown in the diagram.





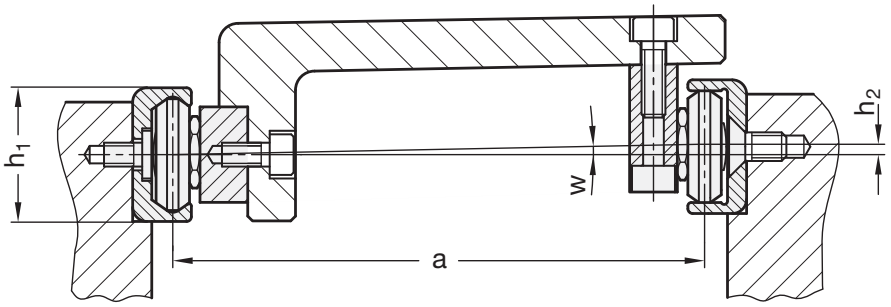
Permissible height offset

The fixed and floating bearing principle ensures that misalignments in the base construction are compensated. However, when using Type UV / UT and XV / XT rails, certain limits should not be exceeded. The following table shows the maximum permissible angle of the height offset of the fixed and floating bearing rails. Please note that the load rating must be reduced by 30% once the specified value is reached.

To calculate h_2, the following equation should be used: $h_2 = a \times \tan w$, with the tabular values shown below used for w.

Example: $h_1 = 43$, a = 650 mm, w max. = 0,171°

$h_2 = 650$ mm x tan 0,171° = 1,94 mm

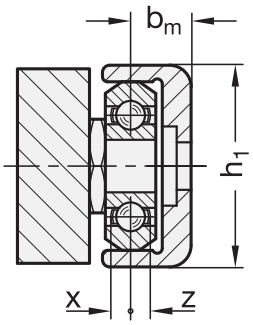


h1	w max.
18	0.057°
28	0.143°
35	0.151°
43	0.171°

Permissible lateral offset

It is possible to compensate for angular defects and the offset of the mounting surface with the help of fixed and floating bearing rails. The permissible offset of cam rollers and cam roller carriages in the Type UT / UV rails is given by the values for x and z. The reference is the nominal middle of the raceway b_m.

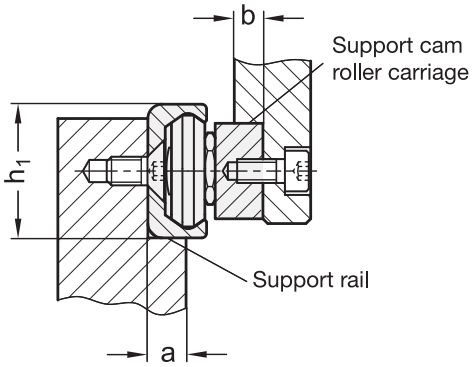
A parallelism or angular error can thus be compensated for across the whole length of the rail, which corresponds to an offset from the sum of the values for x and z.



h1	bm	x	z
18	6.3	1.1	0.3
28	8.6	1.3	0.7
35	10.5	2.7	1.3
43	14.5	2.5	1.5

Support widths

To guarantee the proper running motion, outside dimensions must be observed during the assembly of linear guide rail systems. Suitable components include supports at the rail and at the roller carriage which should not be smaller than the widths a or b. Also, forces acting from the outside can thus be transferred reliably from the linear guide rail systems without submitting the mounting screw to shear stress.

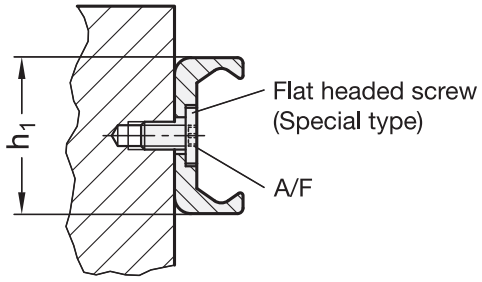


h1	a	b
18	5	4
28	8	4
35	11	5
43	14	5

Tightening torque

When positioning the rails with countersunk mounting holes, Type UT and XT, make sure the surface is flat and the mating tapped holes are tapped deep enough so the flat head screw is flush with the rail.

The specified tightening torque of the flat head screws must be maintained.



h1	Screw	A/F	Tightening torque in Nm
18	M 4 x 8	T20	3
28	M 5 x 10	T25	9
35	M 6 x 12	T30	14
43	M 8 x 16	T40	24

Traversal speed

Depending on application and installation length, the maximum traversal speed of cam roller linear guide rail systems is 7 m/s.

Lubrication

Once the cam roller carriage has been placed in the rail, it is recommended to slightly grease the raceway surfaces of the rail with a heavy duty lubricant for linear guide rail systems, such as Klüberplex BE 31-222, using a brush.

Check the lubricant film at regular intervals for any dirt or pollution, e.g. with metal chips.

In the event of visible pollution or clear discoloration of the lubricant, use a clean rag to clean the rails and the rollers and apply new lubricant.

Applying new lubricant is normally necessary once a year or after 100 km of running distance.

Operational temperatures

The components of the roller guide systems are suitable for use in a temperature range of -30 °C to 130 °C.

Load rating

The installation space, the desired mode of attachment and the load to be carried are the determining factors when selecting the best possible roller guide system. The values given below will help in selecting the most suitable cam roller carriage or the most suitable cam rollers.

The details on load capacity are non-binding guide values given without liability and does not constitute any type of guarantee or warranty of intended use. The user must determine in each individual case whether a product is suitable for the intended application. Environmental factors and aging may affect the stated values.

Cam roller carriages

Instructions for installation - Linear guide rail systems

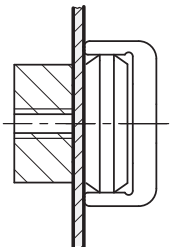
Linear guide rail systems consist of a cam roller linear guide rail GN 2422 (see page 654) and a cam roller carriage GN 2424 (see page 656). All components are packed separately and supplied not assembled. When delivered, the play between cam roller carriage and rail is not preset.

During assembly, set the cam roller carriage as follows:

1. Make sure that the raceways and the cam rollers are clean.

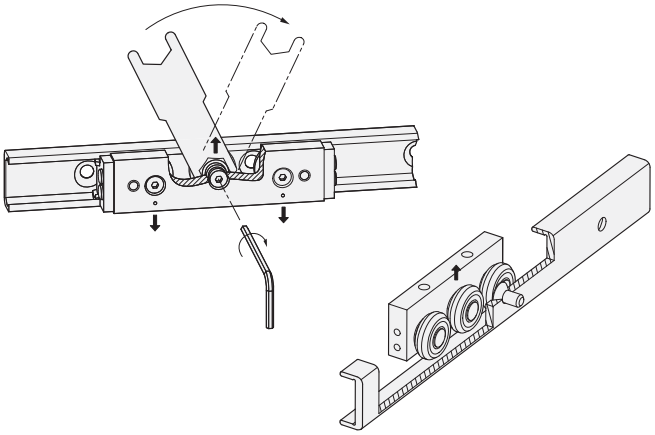
2. Slightly loosen the mounting screw of the central, eccentrically adjustable roller and insert the cam roller carriage (without the wipers supplied) into the rail (see also items 4 and 6).

3. Position the cam roller carriage at one end of the rail. For the floating bearing rails of Type UT and UV, a thin and stable support (e.g. open-end wrench or a feeler gauge) must be placed underneath the ends of the cam roller carriage body and the rail to ensure the parallel alignment of the cam roller carriage in the level raceways.



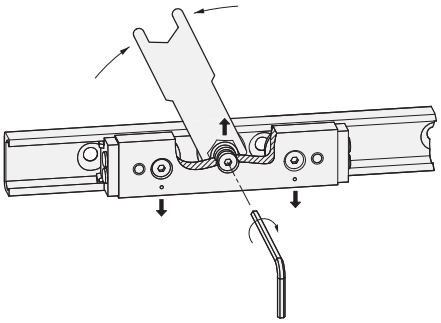
Use support for floating bearing rails!

4. Insert the open-end wrench GN 2424.1 (included) (see page 656) between the eccentric cam roller and the cam roller carriage body. (The centering bores to the left and right mark the position of the running side of the concentric cam rollers / load-bearing cam rollers.)



5. Turning the open-end wrench clockwise will press the cam roller to be adjusted against the top raceway which will set the roller carriage free of play. Excessive pre-tensioning must be avoided because this will increase friction and reduce useful service life.

6. While using the open-end wrench to hold the bearing pivot in the correct position, the mounting screw may be moderately tightened. The correct tightening torque will be checked later.



7. Move the cam roller carriage in the rail and make sure that the play / the moderate pre-tensioning is constant along the full length of the rail. The running motion should be free-moving, with the cam roller carriage having any play or jamming at no point inside the rail.

8. Now tighten the mounting screw with the recommended tightening torque shown in the table, with the open-end wrench holding the angular position of the cam rollers in place.

h_1	Tightening torque in Nm
18	3 Nm
28	7 Nm
35	7 Nm
43	12 Nm

9. Now mount the wipers, and for cam rollers carriage type N, the longitudinal seal. To do so, remove the cam roller carriage from the rail.

10. Before reinserting the cam roller carriage, make sure that the raceways / rollers are properly lubricated using a heavy duty lubricant for linear guidance.

Adjustable slide units

Description
The adjustable slide units GN 900 (see page 664) are a work holding system which can accommodate almost any type of application.

Four standard sizes are available with different slide widths i.e. 30, 50, 80 and 120 mm which again cover almost a full specific range of applications.

As standard for each slide width there are externally guided slides with different openings. The design of these adjustable slide units can accommodate outsize components.

These adjustable slide units can be combined with a range of adaptor components to bring the adjustable slide unit into any required position whether horizontal, vertical or any other angular position for machining operations. A unique clamping technique allows simple and rapid workpiece clamping.

All components are in aluminium, stainless steel and plastic material which makes the adjustable slide units with control knob (Type D) a corrosion free unit.

A range of different operating features with or without digital position indicators is also available. In addition there is a range of other accessories.

Other features
- slides in anodized aluminium
- high load ratings
- favourable friction values
- high quality slideways by virtue of the anodized surface hardness
- backlash free shaft adjustment
- fine adjustment to 0.05 mm
- scale rings with zero position
- adjustable clamping levers to suit the positioning of the slides

Application examples
- Precision positioning of soldering / welding heads
- Adjustment of inkjet printers
- Adjustment of measurement cameras
- Adjustment of laser heads
- Re-adjustment of back stops
- Adjustment of sensors

Specifications with control knob (Type D)

Specifications with control knob and position indicator (Type DN / DR)

Specifications with handwheel (Type H)

Specifications with handwheel and position indicator (Type HN / HR)

Specifications without adjustable spindle (Type S) for manual or pneumatic operation

Adjustable slide units

The manually operated rotary table GN 900.6 (see page 677) is a positioner which extends the range of applications for the adjustable slide units considerably. This rotary table can, of course, also be used without the adjustable slide units.

The adjustable assembly X-Y consisting of two adjustable slide units GN 900 (see page 668) and an X-Y connecting set GN 900.2 (see page 673) with a mounting plate GN 900.4 (see page 675).

The adjustable assembly X-Y-Z consisting of three adjustable slide units GN 900 (see page 668), X- and Z-axis with position indicator, plus rotary table GN 900.6 (see page 677) mounted on Z-axis, assembled on mounting plate GN 900.4 (see page 675).

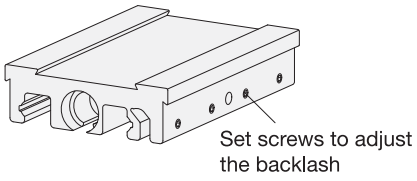
The adjustable assembly X-Y consisting of two adjustable slide units GN 900 (see page 668), Y-axis with rotary plate GN 900.5 (see page 676) positioned at a horizontal cross angle of 120°.

Special execution
Adjustable slide unit type S with a mounted pneumatic cylinder.

Adjustable slide units

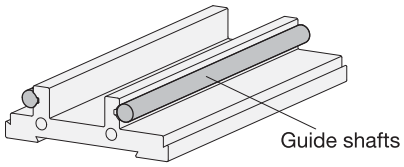
Features

The outer slide is made of a press formed block of anodized aluminium extrusion which is usually the moving part.
As a standard there is usually one outer slide size for each outside slide length on which the connecting sets GN 900.2 (see page 673) and mounting plates GN 900.4 (see page 675) and rotary plates GN 900.5 (see page 676) can be mounted.
Special lengths can be supplied.



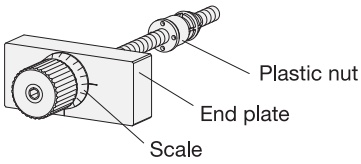
The inner slide is also made of a press formed block of anodized aluminium extrusion which is the carrier. The guides are made of two high grade shafts in stainless steel.

High load ratings and favourable friction values is achieved by the anodized hard guide surfaces.



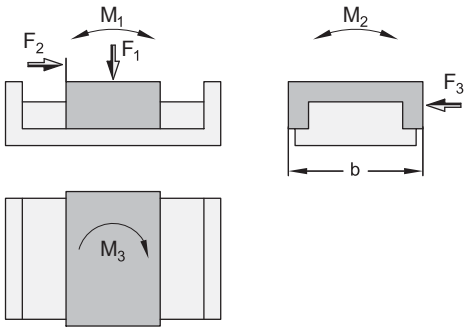
The length of the inner slide is determined by the length of the outer slide by adding the stroke.

The backlash free drive unit consists of an end plate and a preloaded stainless steel spindle, ball bearing mounted, and a preloaded plastic nut (temperature resistant from -20 °C up to + 80 °C).



The thread pitches are:
Slide size b = 30 : 0.5 mm
Slide size b = 50, 80, 120 : 1.0 mm

For positioning a scale is used (one graduation line = 0.05 mm adjustable range) which can be reset to „0“.



Permissible load values of the adjustable slide units GN 900

b	F_1 in N	F_2*in N	F_3 in N	M_1 in Nm	M_2 in Nm	M_3 in Nm

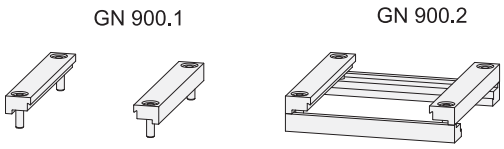
120	1000	300	700	160	20	12

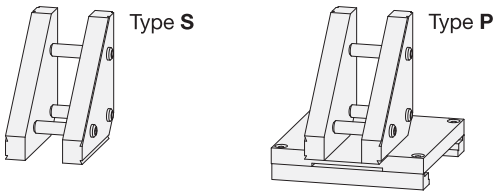
* F_2 is the max/permissible sliding thrust

Fastening units GN 900.1 (see page 672) consist to two mounting rails. On the latter, the adjustable slide unit is mounted on a base plate from the operator's side.



Connecting sets GN 900.2 (see page 673) consist of four rails. With the latter, two adjustable slide units are combined to form an adjustable assembly X-Y (or Y-Z).

Connecting sets GN 900.3 (see page 674) consist of two plates. With the latter two adjustable slide units combined to form an adjustable assembly X-Z (or Y-Z). If this slide has to be parallel to the reference axis this is achieved by using an additional plate (Type P).

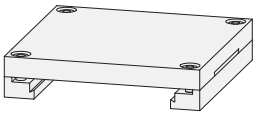


Adjustable slide units

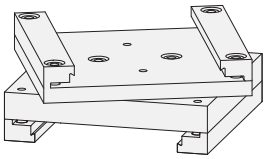
Features

Mounting plates GN 900.4 (see page 675) serve as an adaptor plate to be machined on the side which is required for mounting. By using a machined mounting plate further work on the actual slide can be eliminated.

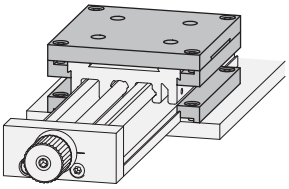
The plate is fixed with the fastening unit GN 900.1 (see page 672) on the adjustable slide unit.



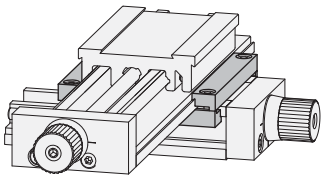
The rotary plate GN 900.5 (see page 676) allows oblique positioning of the adjustable slide unit at any angle.



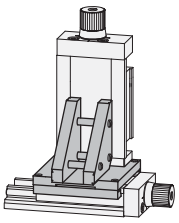
Adjustable slide unit with mounting plate GN 900.4 (see page 675) fitted to the base plate by using fastening unit GN 900.1 (see page 672).



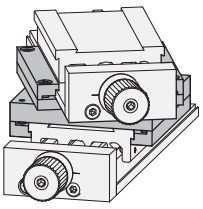
Adjustable slide unit X-Y, adjustable slide unit is fitted to the base plate using connecting set GN 900.2 (see page 673).



Adjustable slide unit X-Z, adjustable slide unit is connected together using the connecting set GN 900.3 (see page 674).



Adjustable slide unit X-Y, Y-slide with rotary plate GN 900.5 (see page 676) set shown in an angular position.



Adjustable slide units

SPECIFICATION

Types

- Type **D**: with Control knob
- Type **H**: with handwheel (from size 50 upwards)
- Type **DN**: with control knob and digital position indicator DD51 (from size 50 upwards) (see page 718)
- Type **DR**: with control knob and digital position indicator DD51 (from size 50 upwards) (see page 718)
- Type **HN**: with handwheel and digital position indicator DD51 (from size 50 upwards) (see page 718)
- Type **HR**: with handwheel and digital position indicator DD51 (from size 50 upwards) (see page 718)
- Type **S**: without adjustable spindle and operating element (i. e. for mounting a pneumatic cylinder)

Identification No.

- No. **1**: without adjustable hand lever
- No. **2**: with adjustable hand lever (only from b=50)

Slides / end plates
Aluminium press formed
anodized extrusion, natural colour

Guide shafts
Stainless Steel

Drive

- Lead spindel / ball bearing Stainless Steel
- Lead nut Plastic

Fixing screws
Stainless Steel

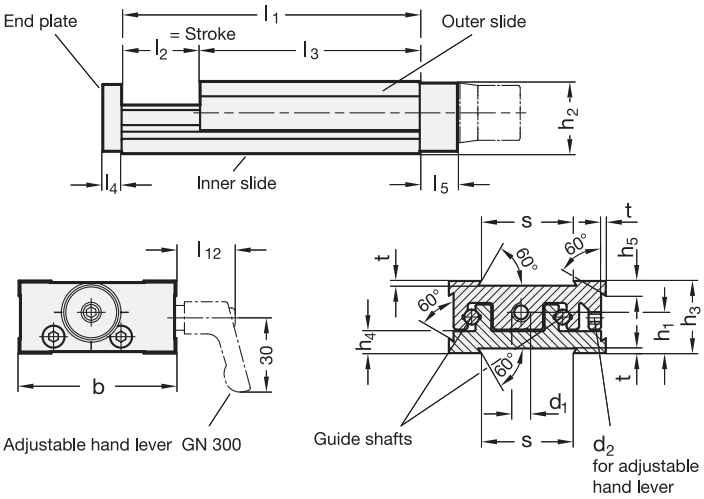
Control knob / Scale ring
Aluminium, black anodized

INFORMATION

Adjustable slide units GN 900 can be combined with a range of adaptors to give various axis configurations.
These fastening units and connecting sets (GN 900.1, GN 900.2, GN 900.3) can be clamped to the adjustable slide units in a rapid and simple way.
For fine adjustment there is a scale ring graduated in increments of 0.05 mm, with digital position indicator 0.02 mm.
Furthermore this adustable slide units (Type D, with control knob) is rust proof.

TECHNICAL INFORMATION

- Disc handwheels VDN.FP (see page 162)



* Complete with identification no. of the adjustable slide unit (1 or 2)

Weight identification no. 1

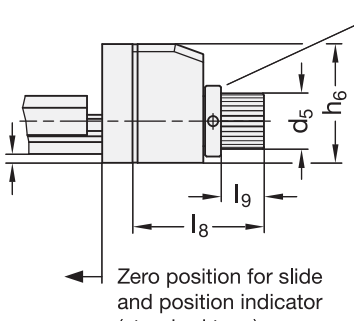
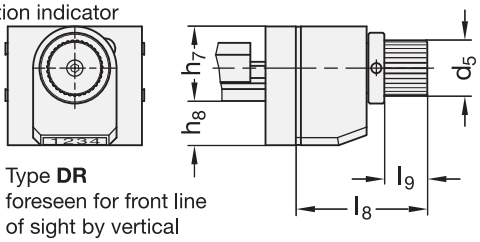
3,5 mm protruding on size 50

Type **DN**
Figure in front of decimal point refers to the movement in mm



Set ring to re-adjust zero position of the position indicator

Zero position for slide and position indicator



Type **DR**
foreseen for front line of sight by vertical composition of slider

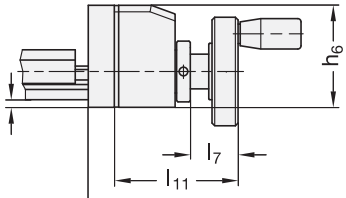
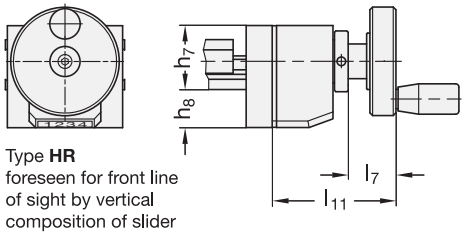
3,5 mm protruding on size 50

Type **HN**
Figure in front of decimal point refers to the movement in mm



Zero position for slide and position indicator (standard type)



Type **HR**
foreseen for front line of sight by vertical composition of slider (Z-axis)

Fastening units

for adjustable slide units GN 900

SPECIFICATION

Types

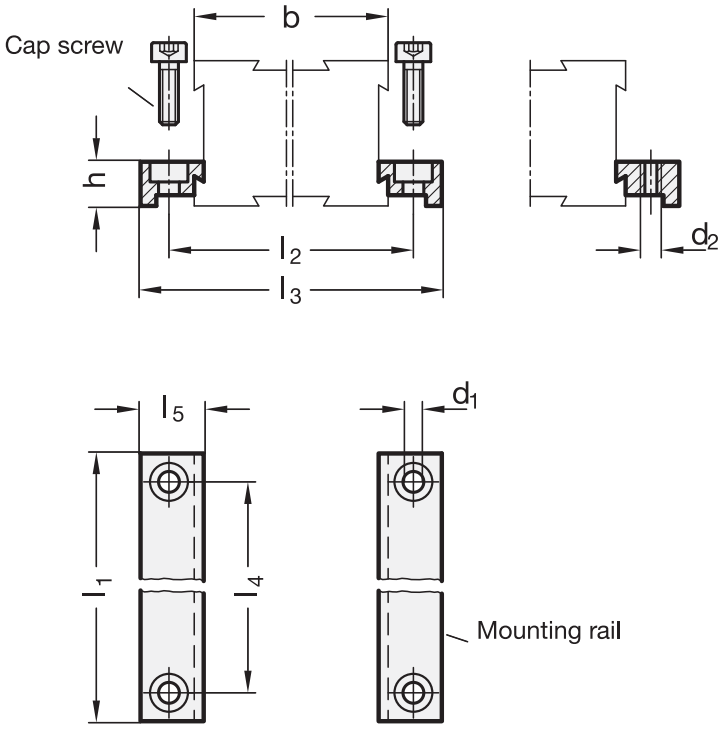
- Type **A**: with bore for cap screw
- Type **B**: with threaded bore d2

Aluminium
anodized, natural colour

Socket head cap screw DIN 912
Stainless Steel

INFORMATION

Fastening units GN 900.1 are fitted to the base of the adjustable slide units GN 900 (see page 668) from the operator's side.
The mounting is made on the outside ledge of the slide so that the inner slide can still be moved.
A fastening unit GN 900.1 consists of two mounting rails. Four Stainless Steel-cap screws are inclueded.



Mounting example

GN 900.2

Connecting sets X-Y

for adjustable slide units GN 900

SPECIFICATION

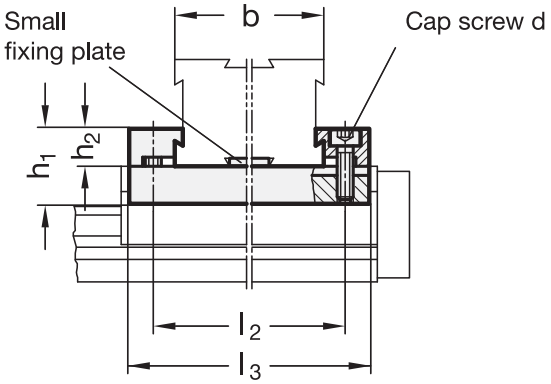
Aluminium
anodized, natural colour

Socket head cap screws DIN 912
Stainless Steel

INFORMATION

With connecting sets GN 900.2 two adjustable slide units GN 900 (see page 668) can be combined to produce an X-Y axis configuration.

This combination is achieved with a clamping system which eliminates the use of any kind of fixing holes in the slide.
The stationary base of the second adjustable slide unit is clamped on to the slide of the first unit to give the X-Y configuration. The slides on both units together give the X-Y movement.
The small fixing plate serves for the 90° alignment and fine adjustment of the XY-axis configuration.
All parts required to make up a set are included.



Mounting example

Connecting sets X-Z

for adjustable slide units GN 900

SPECIFICATION

Types

- Type **P**: Mounting the Z-axis via connecting plate and additional plate
- Type **S**: Direct mounting of the Z-axis via connecting plate

Aluminium
anodized, natural colour

Grub screw DIN 913
Steel, zinc plated

Socket head cap screws DIN 912
Stainless Steel

INFORMATION

With connecting sets GN 900.3 two adjustable slide units GN 900 (see page 668) can be combined to produce an X-Z axis configuration. The combination is created by using two connection plates which eliminate any type of fixing holes in the slides. At the same time the adjustable slide unit with the Z-axis can, to a limited extent (vertically to the Z-axis), still be adjusted.
In the case of a slide configuration of the Z-axis parallel to the reference axis (type P) an adaptor plate (complete with a fastening set, small fixing plates and socket head cap screws) is required which is included in the set.
The small fixing plates serves for the 90° alignment of the Z-axis and fine adjustment of the adaptor plate (Type P).
All parts required to make up a set are included.

GN 900.4

Mounting plates

for adjustable slide units GN 900

SPECIFICATION

Types

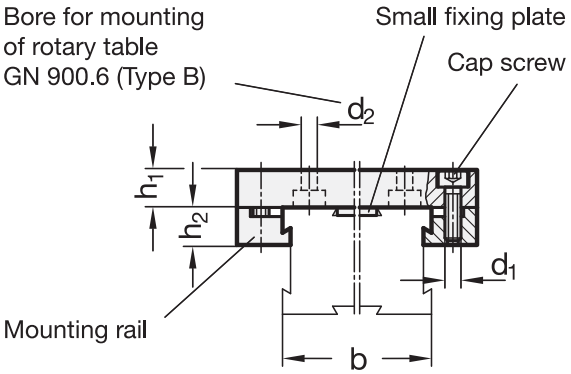
- Type **A**: without retaining bores
- Type **B**: with retaining bores for rotary tables

Aluminium
anodized, natural colour

Socket head cap screws DIN 912
Stainless Steel

INFORMATION

Mounting plates GN 900.4 type A are used for installing fixtures on the operator's side. Type B is used for installing a rotary table GN 900.6 (see page 677).
The mounting plate can be simply clamped on to the slide and no additional drilled holes are required.
The small fixing plates serves as an additional fine adjustment of the mounting plate with the adjustable slide unit.
All parts required to make up a set are included.



Mounting example

Rotary plates

for adjustable slide units GN 900

SPECIFICATION

Aluminium
anodized, natural colour

Socket head screws DIN 912
Stainless Steel

INFORMATION

Rotary plates GN 900.5 allow rotation of one of the adjustable slide units at an off-set angle to the other. This possibility offers an additional axis configuration.
The alternative adaptor consists of two plates connected together in the center so they may be rotated. The lower plate is clamped to the lower sliding part, while the upper one is clamped to the stationary base of the upper sliding unit.
All parts required are included.

GN 900.6

Rotary tables

SPECIFICATION

Rotary disc
Stainless Steel AISI 303

all other parts
Steel (some zinc plated)
ad/ or Brass

Control knob
Aluminium
black anodized

INFORMATION

Rotary tables GN 900.6 is a turning unit for manual operation. To get the turning movement we use a high quality worm gear.
The rotary table is also fitted with a fastadjustment and for this purpose a grub screw on the side of the rotary disc has to be released. In addition the rotary disc can also be clamped via an easily accessible grub screw. In both cases internal conically shaped arresting components come into use.

Bull's eye levels and screw-on levels

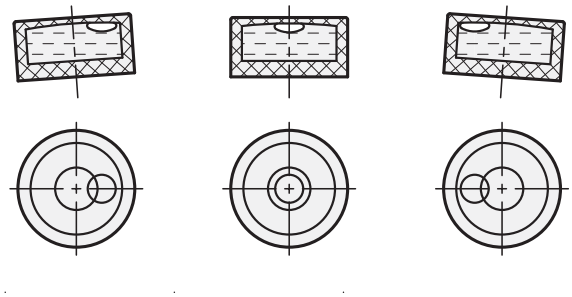
Technical information

Definition of terms

A spirit level is hollow body filled with a fluid and a gas bubble which is used to check the horizontal position of an object. The position of the gas bubble in the fluid shows the angle and the direction at which the object is inclined in relation to the horizontal level.

The function

The hollow body containing the fluid and the gas bubble has a defined radius at its topic side, causing the gas bubble to float by its buoyancy always to the highest point.
The transparent upper section normally carries markings or a circle centric to the biddle position. If the gas bubble is centered precisely inside the merking and if the air level is properly adjusted, the object to be checked is in the horizontal position.

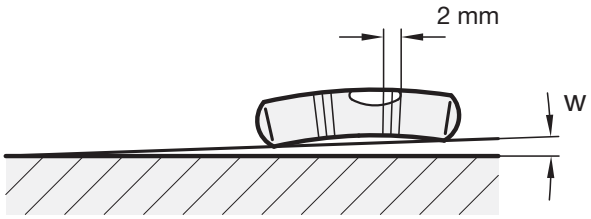


Types of spirit levels

Spirit levels are available as bull´s eye levels or screw-on levels.
Bull´s eye levels simultaneously measure the angle of inclination and the angular position, e.g. of a certain level, whereas screw-on levels indicate the angle of inclination in one dimension only along the axis of the level.

Sensitivity

The sensitivity of spirit levels is given as angle of inclination, e.g. 30 angular minutes or 0.5 degrees. This is the angle of inclination by which the spirit level must be tilted to make the bubble move by 2 mm. A spirit level with a sensitivity of 6 angular minutes therefore has a higher sensitivity than a spirit level with a sensitivity of 30 angular minutes.



Angle of inclination and difference in altitude

Sensitivity is sometimes also given in millimetre per metre, i.e. as difference in altitude per unit of the length.

See also the reference table opposite.

Difference in altitude in milimetre per metre	Angle w	
	in angular minutes	Degree, decimal
0.3	1	0.0167
0.9	3	0.0500
1.7	6	0.1000
2.9	10	0.1667
5.8	20	0.3333
8.7	30	0.5000
11.6	40	0.6667
14.5	50	0.8333
17.5	60	1.0000

GN 2277.1

Adjustment plates

for bull´s eye levels GN 2277

SPECIFICATION

Stainless AISI 303 **NI**

INFORMATION

Adjustment plates GN 2277.1 are used in combination with bull´s eye levels GN 2277 (Type A) (see page 680).
The mounting bore holes offset by 120° allow the bull's eye levels and the mounting plate to be aligned in relation to the mounting surface. An alignment ball at the bottom surface of the adjustment plate serves as tilting point. Specific tightening torques of the bolts allow to be achieved, so that the bubble is located inside the marking ring once the horizontal alignment is reached.

GN 2277 | Bull´s eye levels

Installation example

Bull´s eye levels and levelling elements - in this example, levelling elements GN 355 (see page 1314) and assembly tool GN 355.1 (see page 1315) - are ideal to use when a holding plate is to be brought into an exact horizontal position.
Even after the initial adjustment, the bull´s eye level remains in the unit so that the correct allignment can be checked and adjusted again.

Bull´s eye levels

for installation in plates and housings

SPECIFICATION

Sensitivity

- Type **10**: Angle minutes, bubble move by 2mm (only Version ALS)
- Type **40**: Angle minutes, bubble move by 2mm (only Version KT)

Identification no.

- No. **1**: without contrast ring
- No. **2**: with contrast ring (only version KT for d=12...18)

Housing

Aluminium, anodized, natural colour **ALS** /
Viewing window, glass

Plastic, white **KT** /
Viewing window, transparent

Filling

- coulourless-transparent **K**
- green-transparent **G** (only Version KT)

INFORMATION

Due to their cylindrical design, bull´s eye levels GN 2281 are suitable for installation in plates and housings where they serve to check the horizontal position of jigs, machines and devices.
Bull´s eye levels are not aligned, i.e. there is no reference to the external outline of the level. The vertical position must be ensured by aligning the holding building element.
The black housing of the version ALS creates a reflection at the edge of the bubble which significantly improves the readability. Version KT is available with contrast ring inside the air level housing (Identification no. 2) which creates the same effect.
Alternatively, the contrast can also be improved by a dark surface inside the mounting bore hole.

ON REQUEST

Screw-on levels

for mounting with screws

SPECIFICATION

Sensitivity

- Type **6**: Angle minutes, bubble move by 2mm
- Type **50**: Angle minutes, bubble move by 2mm

Identification no.

- No. **1**: Viewing window top
- No. **2**: Viewing window top - front
- No. **3**: Viewing window top - front - back

Housing brass

plastic coated, textured finish
black, RAL 9005 **MSW**
silver, RAL 9006 **MSR**

Spirit lever element
Glass plastic body

Filling
green-transparent **G**

Casting compound
mineral-based

INFORMATION

Screw-on levels GN 2282 are used to check the horizontal position of jigs, machines, devices, appliances and instruments.
The spirit levels are aligned in relation to the finished reference surface so that the bubble is centered in the middle of the marking lines once the horizontal position of the contact surface in the longitudinal direction is reached.

ON REQUEST

- Filling, colourless-transparent
- Other sensitivities
- Other colours

CLAYTON

DESIGNED
FOR ENGINEERING

7 Rotary controls

Gravity indicators

Positive drive indicators

Direct drive indicators

Handwheels with indicator

ELESA-CLAYTON position indicators

General features

ELESA-CLAYTON rotary controls are used to set and regulate a wide variety of machine functions.
In general these indicators are used to regulate flows, capacities, strokes, setting of speed variators, etc.
Each device consists of:

- a handwheel/knob, to manoeuvre the control spindle, thus changing the position of the machine element
- a position indicator, which provides the position of the machine element.

Position indicators

ELESA-CLAYTON position indicators can be classified according to the type of reading or movement.
The indicators are normally supplied separately from their relative handwheels/knobs, except for integral models, whose indicator is fitted in during the production.

Type of reading

Analogue: the reading is displayed by means of two rotating pointers over a graduated dial.
Digital-Analogue: the reading is directly displayed by means of a roller counter and a rotating pointer over a graduated dial.
Digital: the reading is directly displayed by means of a roller counter.
LCD Digital: the reading is directly displayed by means of a digital electronic display.
The analogue indicators are normally provided with a graduated dial and two pointers which indicate the number of turns and part of a turn made by the control spindle starting from an initial position zero.
The indicators with digital-analogue, digital and LCD digital reading are provided with a roller counter or a display which indicates the linear displacement of the machine element connected to the control spindle from the initial position zero.

Type of functioning

Gravity Movement: is used when the handwheel spindle is horizontal or max 60° inclined. The rotation of the handwheel with the indicator makes the pointers move while the dial, appropriately counterbalanced, is kept still by the gravity force.
Positive drive Movement: is used on spindles in any position. The rotation of the handwheel with the indicator makes the pointers move while the dial is kept still by an anchor pin fitted to the machine.
Direct drive Movement: is used on control spindles in any position, the indicator is directly mounted on the control spindle and is kept in position by means of a referring back pin.

How to select the position indicators

- Establish if it is necessary to display a number of turns or a linear displacement. For the first application choose an analogue indicator. For the second one choose a digital-analogue, digital or LCD digital indicator.
- Establish the indicator and the spindle position on which depends the choice of the requested movement: gravity, positive drive or direct drive.
- Establish the required ratio for analogue types or the reading after one revolution for the following types: digital-analogue, digital and LCD digital.
- Establish the direction of rotation.
  For clockwise increasing readings (right) = D.
  For anticlockwise increasing readings (left) = S.
- Consider the conditions of use of the handwheel i.e. outdoors, vibrations, corrosive environments, etc. See the complete data on the page of the chosen indicator.
- Choose the appropriate handwheel/knob for the application considering the diameter and the grip required to transmit the necessary torque. Other factors to take into consideration are the control spindle diameter and whether a handle is required for quick operations.

Special executions

ELESA-CLAYTON position indicators standard range available on this catalogue satisfies most applications. Changes to adapt the indicator to particular applications are possible, for example:

- special dials for indicators with analogue or digital-analogue reading, to be developed on the customer's indications
- stainless steel metal parts for application on machines and equipment where laws or particular hygienic and environmental factors make it mandatory to use corrosion resistant materials
- gravity indicators with analogue reading with glycerine-filling for high vibration applications, which may interfere with the reading, and for avoiding condensation on the indicator window
- special ratios on the customer's request and for sufficient quantities, developed by ELESA Technical Department.

Gravity position indicators

Features

Suitable for use on control spindles with horizontal or max 60° inclined position.
The movement is housed in a sealed case (fig. 1). It consists of a counterweight system, fitted on a precision ballrace, which rotates on a central spindle integral with the indicator case, fitted on the handwheel/knob. At the end of the spindle there is a red pointer, which rotates with the handwheel/knob. A series of gears with different ratios transmits the rotation of the spindle to a black pointer. On the counterweight, a graduated dial is also fixed. If the indicator is fitted on spindles with horizontal position (or max 60° inclined) the dial is kept still by the gravity force and the pointers rotate over it when the handwheel/knob turns.

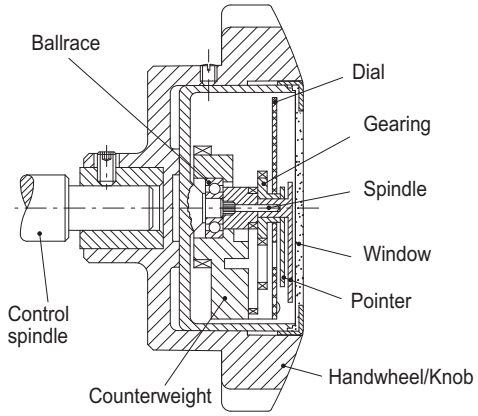

figure 1

Ratios

Each complete turn of the big pointer (red) corresponds to a fraction of turn of the small pointer (black). The number of turns of the red pointer, to make the black pointer to carry out one complete turn, is the ratio of the indicator.
Example: a ratio of 12:1 means that 12 turns of the red pointer correspond to a complete turn of the black pointer (fig. 2).
12 turns of the handwheel cover the entire setting range. For each turn of the handwheel, the black pointer indicates 1/12 of the entire dial.

figure 2

Choice of the indicator ratio

- Set the control spindle to the initial or referring position.
- Count the number of turns of the control spindle to cover the entire setting range.
- The result of this operation is the ratio. Should it not correspond to a standard ratio, choose the next highest one.
- For an optimal dial reading, and therefore for a more precise reading, we recommend to choose a ratio which is as near as possible to the handwheel turns required to cover the entire setting range. For instance, if 11 turns are required, the ratio 12:1 is the most convenient, because 11/12 of the available graduation will be used. If 24:1 ratio would be chosen, only 11/24 of the graduation would be used and reading would be less accurate.
- Indicators with standard ratios are normally on stock to suit most requirements.

Dials

Dials are available for all standard ratios in both clockwise (D) or anticlockwise (S) configurations.
Standard dials give a number which can be translated, by means of conversion tables, to the value of the set-up executed.
On request and for sufficient quantities, special dials with marks or customised graduations can be supplied to have a direct reading.

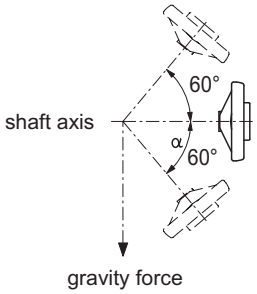

figure 3

Accuracy

The gravity indicator is more accurate when used on horizontal control spindles. It can be however used on spindles max 60° inclined, but the accuracy decreases as the angle of inclination a° increases (fig. 3).

Assembly instructions

Assembly of the indicators to handwheels/knobs:

- couple the handwheel to the control spindle by means of a pin or a grub screw.
- set the control spindle to the initial or referring position, by rotating the handwheel.
- turn the indicator, by keeping it in the hands, until the pointers are in zero position.
- fit the zeroed indicator into the handwheel/knob and uniformly tighten the radial securing screws with a moderate torque to prevent distortion of the indicator case and thus locking the movement.

Assembly of integral indicators (built-in in the handwheel):

- set the control spindle to the initial or referring position.
- turn the indicator, by keeping it in the hands, until the pointers are in zero position.
- couple the integral indicator to the control spindle by tightening the grub screw, after checking that spindle and indicator are in zero position.

Possible assembly

Positive drive indicators

Features

Suitable for use on control spindles in any position.
The movement is housed in a sealed case (fig.1). The handwheel/knob, containing the indicator, is coupled to the control spindle. On the rear of the handwheel/knob, a fl ange with internal crown gear wheel (shrouded) is fi tted to the machine frame by means of an anchor pin (or similar). By so doing, during handwheel rotation, the fl ange is integral with the machine. The rotation of the handwheel causes the planet pinion to rotate, transmitting in this way the movement inside the indicator case. The rotation is then transmitted to both pointers by means of a gearing, while the graduated dial remains still, thanks to the fi xing to the machine frame, by means of the anchor pin.

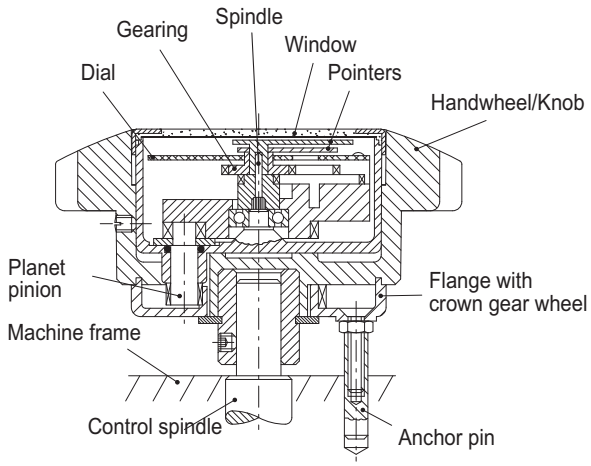

figure 1

Ratios

Each complete turn of the big pointer (red) corresponds to a fraction of turn of the small pointer (black). The number of turns of the red pointer, to make the black pointer to carry out one complete turn, is the ratio of the indicator.
Example: a ratio of 12:1 means that 12 turns of the red pointer correspond to a complete turn of the black pointer (fig. 2).
12 turns of the handwheel cover the entire setting range.
For each turn of the handwheel, the black pointer indicates 1/12 of the entire dial.

figure 2

Choice of the indicator ratio

- Set the control spindle to the initial or referring position.
- Count the number of turns of the control spindle to cover the entire setting range.
- The result of this operation is the ratio. Should it not correspond to a standard ratio, choose the next highest one.
- For an optimal dial reading, and therefore for a more precise reading, we recommend to choose a ratio which is as near as possible to the handwheel turns required to cover the entire setting range. For instance, if 11 turns are required, the ratio 12:1 is the most convenient, because 11/12 of the available graduation will be used. If 24:1 ratio would be chosen, only 11/24 of the graduation would be used and reading would be less accurate.
- Indicators with standard ratios are normally on stock to suit most requirements.

Dials

Dials are available for all standard ratios in both clockwise (D) or anticlockwise (S) configurations.
Standard dials give a number which can be translated, by means of conversion tables, to the value of the set-up executed.
On request and for sufficient quantities, special dials with marks or customised graduations can be supplied to have a direct reading.

Assembly instructions

- Drill a bore in the machine frame for the rear anchor pin of the flange.
- Set the control spindle to the initial or referring position.
- Remove the black protection cap of the planet pinion, turn the latter until the pointers are in zero position.
- Take the chosen handwheel/knob and mount the supplied anchor pin on the screw protruding from the rear fl ange. Be sure that the hole for the indicator planet pinion is at 12 o'clock. Turn the rear fl ange and position the anchor pin in line with the referring bore drilled on the machine.
- Gently fit the zeroed indicator into the handwheel/knob, inserting the planet pinion smoothly into the corresponding hole. To make the fitting of the indicator easier, gently turn by some degrees the rear flange until the planet pinion is geared to the internal crown gear wheel. Check that the indicator is zeroed and that the screw for the anchor pin is in the correct position.
- Uniformly tighten the lateral grub screws for fixing the indicator case with a moderate torque, to prevent distortion of the case itself and thus locking the movement.
- Adjust the height of the anchor pin so that no undue strain is caused to the flange and tighten the locknut.
- Couple the handwheel with the indicator to the zeroed control spindle. Be sure that the indicator pointers are in zero position and that the anchor pin is in line with the referring bore on the machine.
- Pin the handwheel on the spindle.
- Check the right functioning of the indicator over all the rotation range.

GA01 - GA02 - GA05

Position indicators

gravity drive, steel

CASE
Zinc-plated steel.

BEZEL
AISI 303 stainless steel.

WINDOW
Glass.

DIAL
Natural matte anodised aluminium.
Clockwise (D) or anti-clockwise (S) graduation, black colour.

READING
The black pointer indicates the number of turns of the spindle from the start position (0); the red pointer indicates the fractions of turn.
Ballrace rotation: maximum reading accuracy.

RATIO
To choose the ratio see "Gravity position indicators introduction" (on page 690).

FEATURES AND APPLICATIONS
The knobs with integral gravity position indicator are suitable on spindles with horizontal or max 60° inclined axis.
To choose the handwheel see the table "Handwheels/knobs-possible assembly with indicators" (on page 691).

SPECIAL EXECUTIONS ON REQUEST
- Special dial with logo or customized graduations
- Special ratios
- Liquid filled
- Single pointer
- Window in plexiglass instead of glass.

CASE
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
Moulded-in spindle.

BEZEL
Technopolymer. Moulded over the window.

WINDOW
Transparent polyamide based (PA-T) technopolymer (practically unbreakable).
Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DIAL
Natural matte anodised aluminium.
Clockwise (D) or anti-clockwise (S) graduation, black colour.

READING
Five-digits roller counter and one red pointer which turns on the graduated dial. The digit of the red roll shows the decimal values, while the pointer shows the hundredth.
The display indicates the displacement of the mechanism controlled by the spindle from the start position (0). One complete turn of the machine spindle corresponds to a turn of the handwheel/knob and consequently to a turn of the red pointer. A turn of the red pointer corresponds to a determinate reading on the counter (see "reading on the counter after one revolution of the red pointer" in the table).
Ballrace rotation: maximum reading accuracy.

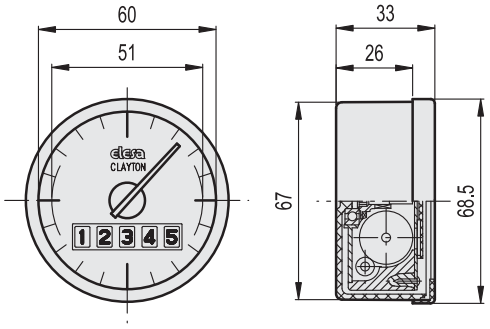
IP PROTECTION
The ultrasonic welding of the window to the case guarantees the complete sealing with IP 67 protection class, see EN 60529 table (on page A23).

FEATURES AND APPLICATIONS
The knobs with integral gravity position indicator are suitable on spindles with horizontal or max 60° inclined axis.
To choose the handwheel see the table "Handwheels/knobs-possible assembly with indicators" (on page 691).

ELESA Original design

SPECIAL EXECUTIONS ON REQUEST
- No pointer
- Plain dial
- Special dial with logo or customized graduations
- Special readings after one revolution.

INSTRUCTIONS OF USE
These indicators are supplied with a screw on the rear case to prevent the mechanism from rotating during transportation, avoiding any displacement of reading. Before assembling the indicator into the handwheel, remove the screw from the back and fit the self-adhesive element supplied to guarantee IP 67 sealing.



Example of description for ordering

00050	0005.0	000.50	00.050	100

Graduation

Graduated dial resolution

Divide the reading of the counter for the number of graduations of the dial.

Example: 00002 / 20=0.1

Increasing graduation

clockwise **D** anti-clockwise **S**

PA01 - PA02 - PA05

Position indicators

positive drive, steel

CASE
Zinc-plated steel.

BEZEL
AISI 303 stainless steel.

WINDOW
Glass.

DIAL
Natural matte anodised aluminium.
Clockwise (D) or anti-clockwise (S) graduation, black colour.

READING
The black pointer indicates the number of turns of the spindle from the start position (0); the red pointer indicates the fractions of turn.

RATIO
To choose the ratio see "Positive drive indicators introduction" (on page 692).

FEATURES AND APPLICATIONS
Digital-analogue positive drive indicators are suitable with spindles in any position.
To choose the handwheel see the table "Handwheels/knobs-possible assembly with indicators" (on page 693).

SPECIAL EXECUTIONS ON REQUEST
- Special dial with logo or customized graduations
- Special ratios
- Single pointer
- Window in plexiglass instead of glass.

RoHS IP65 PA PA-T +100° 0°

Position indicators

positive drive, technopolymer

CASE
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
Moulded-in spindle.

BEZEL
Technopolymer. Moulded over the window.

WINDOW
Transparent polyamide based (PA-T) technopolymer (practically unbreakable).
Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DIAL
Natural matte anodised aluminium.
Clockwise (D) or anti-clockwise (S) graduation, black colour.

READING
The black pointer indicates the number of turns of the spindle from the start position (0); the red pointer indicates the fractions of turn.

RATIO
To choose the ratio see "Positive drive indicators introduction" (on page 692).

IP PROTECTION
The ultrasonic welding of the window to the case guarantees the complete sealing with IP 65 protection class, see EN 60529 (on page A23).

FEATURES AND APPLICATIONS
Digital-analogue positive drive indicators are suitable with spindles in any position.
To choose the handwheel see the table "Handwheels/knobs-possible assembly with indicators" (on page 693).

SPECIAL EXECUTIONS ON REQUEST
- Special dial with logo or customized graduations
- Special ratios
- Single pointer

Digital-analogue position indicators

positive drive, technopolymer

CASE
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.
Moulded-in spindle.

BEZEL
Technopolymer. Moulded over the window.

WINDOW
Transparent polyamide based (PA-T) technopolymer (practically unbreakable).
Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DIAL
Natural matte anodised aluminium.
Clockwise (D) or anti-clockwise (S) graduation, black colour.

READING
Five-digits roller counter and one red pointer which turns on the graduated dial. The digit of the red roll shows the decimal values, while the pointer shows the hundredth.
The display indicates the displacement of the mechanism controlled by the spindle from the start position (0). One complete turn of the machine spindle corresponds to a turn of the handwheel/knob and consequently to a turn of the red pointer. A turn of the red pointer corresponds to a determinate reading on the counter (see "reading on the counter after one revolution of the red pointer" in the table).

IP PROTECTION
The ultrasonic welding of the window to the case guarantees the complete sealing with IP 65 protection class, see table EN 60529 (on page A23).

FEATURES AND APPLICATIONS
Digital-analogue positive drive indicators are suitable with spindles in any position.
To choose the handwheel see the table "Handwheels/knobs-possible assembly with indicators" (on page 693).

SPECIAL EXECUTIONS ON REQUEST
- No pointer
- Plain dial
- Special dial with logo or customized graduations
- Special readings after one revolution.

Knurled grip knobs for position indicators

Technopolymer

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, glossy finish.

STANDARD EXECUTION
Black-oxide steel boss, H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
IZN-XX knurled grip knobs can be used with analogue and digital-analogue gravity indicators.
To choose the indicator see the table below for possible assembly with indicators.
See also "Assembly instructions" (on page 690) for gravity indicators type G.

ACCESSORIES ON REQUEST
Cover CP-XX (see page 715) for fitting instead of the indicator.

MBT-XX

Diamond cut knurled knobs for position indicators

Technopolymer

ELESA Original design

MATERIAL
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.
- **MBT-GXX**: for gravity indicators.
- **MBT-PXX**: for positive drive indicators.

Rear flange with internal crown gear wheel in acetal resin based (POM) technopolymer. Black-oxide steel screw and anchor pin.

ERGONOMY AND DESIGN
The particular knurling on the outside rim of the knob, provided with a structure of very fine pitch, allows a safe and comfortable grip, offering the operator the possibility of operating under the most different working conditions in a sensitive and ergonomic way and simplifying the adjustment of the knob during rapid rotation (or screwing) without any unpleasant angular work for the hand and wrist.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
To choose the indicator see the table below for possible assembly with indicators.
See also "Assembly instructions" (on page 690) for gravity indicators or positive indicators type G or positive drive indicators type P (on page 692).

ACCESSORIES ON REQUEST
Cover CP-XX (see page 715) for fitting instead of the indicator.

Lobe knobs for position indicators

Technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

Boss H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.

- **VHT-GXX**: for gravity indicators.

Black-oxide steel boss.

- **VHT-GXX-SST**: for gravity indicators.

AISI 303 stainless steel boss.

- **VHT-PXX**: for positive drive indicators.

Rear flange with internal crown gear wheel in acetal resin based (POM) technopolymer. Black-oxide steel screw and anchor pin.
Black-oxide steel boss.

FEATURES AND APPLICATIONS

The lobed shape with no cavities prevents unhealthy residues from depositing. Particularly suitable for applications on machines and equipment whose parts must be frequently cleaned by using water jets or steam.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)

To choose the indicator see the table below for possible assembly with indicators.
See also "Assembly instructions" for gravity indicators type G (on page 690) or positive drive indicators type P (on page 692).

ACCESSORIES ON REQUEST

Cover CP-XX (see page 715) for fitting instead of the indicator.

Handwheel for position indicators

Technopolymer

ERGOSTYLE® XVII Premio Compasso d'oro 1994

MATERIAL
Glass-fibre reinforced polypropylene based (PP) technopolymer, grey-black colour, matte finish.

REVOLVING HANDLE
IEL+x-SOFT (see page 572) in technopolymer coated with "soft-touch" thermoplastic elastomer (TPE), black colour, matte finish.

STANDARD EXECUTION
Black-oxide steel hub, H7 reamed hole.
Rear flange with internal crown gear wheel in acetal resin based (POM) technopolymer. Black-oxide steel screw and anchor pin.

FEATURES AND APPLICATIONS
This steering handwheel has been designed to be mounted on control shafts of machines or equipment and especially for guiding lift trucks and handling vehicles.

ERGONOMY AND DESIGN
The lowered profile of the steering handwheel makes it suitable for flush mounting on the control panel, thus reducing protruding parts to a minimum.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
The steering handwheel can be used with a position indicator PA02 (see page 699), PA12 (see page 700) or PW12 (see page 701) to read steering positions.
See also "Assembly instructions" (on page 692) for positive drive indicators type P.

ACCESSORIES ON REQUEST
- Axial retaining washer GN 184 (see page 971).
- Cover CP-XX (see page 715) for fitting instead of the indicator.

SPECIAL EXECUTIONS ON REQUEST
EWW-XX steering handwheel is suitable also for using with gravity indicators.

VDN-XX

Solid handwheels for position indicators

Duroplast

MATERIAL
High-strength, reinforced phenolic based (PF) Duroplast, black colour, glossy finish.

INDICATOR HOUSING
SC-XX (see page 715) made out of glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

REVOLVING HANDLE
I.301+x (see page 574) made out of Duroplast, black colour, glossy finish.

STANDARD EXECUTION
Black-oxide steel hub, not drilled.
See table for the values of max d diameter and max p depth for drilling.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
VDN-XX solid handwheels can be used with analogue gravity indicators GA05 (on page 694).
See also "Assembly instructions"for gravity indicators (on page 690).

SPECIAL EXECUTIONS ON REQUEST
Execution with hand reset: the indicator reading can be reset in any position within the positioning range, so that further readings can be referred to the reset point. To reset the reading turn the indicator housing until the two pointers reach the zero position, by keeping the indicator body still. By so doing the relevant position (phase) between the indicator and the handwheel can be changed by a small effort, but enough to avoid any accidental phase displacement.

Handwheels for positions indicators

Duroplast

MATERIAL
High-resistance reinforced phenolic based (PF) Duroplast, black colour, glossy finish.

STANDARD EXECUTIONS
Black-oxide steel hub.
- **VDC-GXX**: for gravity indicators.

Not drilled hub, see table for maximum permissible boring diameters d' and d''.
- **VDC-GXX+I**: for gravity indicators.

Not drilled hub, see table for maximum permissible boring diameters d' and d''.
Revolving handle I.301+x (see page 574) in Duroplast, black colour, glossy finish.
- **VDC-PXX+I:** for positive drive indicators.

Rear flange with internal crown gear wheel in acetal resin based (POM) technopolymer. Black-oxide steel screw and anchor pin.
Hub with H7 reamed through hole.
Revolving handle I.301+x (see page 574) in Duroplast, black colour, glossy finish.

ERGONOMY
The rim with internal rear scallops (for models with diameter D ≥ 125 mm) makes the grip and the manoeuvre of the handwheel easier especially in the versions without handle.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
To choose the indicator see the table below for possible assembly with indicators.
See also "Assembly instructions" for gravity indicators type G (on page 690) or positive drive indicators type P (on page 692).

Handwheels for positions indicators

Technopolymer

ELESA Original design

MATERIAL
High-resilience polypropylene based (PP) technopolymer, black colour, matte finish.

INDICATOR HOUSING
Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS
Black-oxide steel boss, H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.
- **VRTP-GXX2**: without handle.
- **VRTP-GXX2+I**: with revolving handle I.621+x (see page 576) in polyamide based (PA) technopolymer, black colour, matte finish.

INDICATOR CHOICE (TO BE ORDERED SEPARATELY)
VRTP-XX two-spoke handwheels can be used with analogue and digital-analogue gravity indicators.
To choose the indicator see the table below for possible assembly with indicators.
See also "Assembly instructions" for gravity indicators type G (on page 690).

SPECIAL EXECUTIONS ON REQUEST
Execution with hand reset: the indicator reading can be reset in any position within the positioning range, so that further readings can be referred to the reset point. To reset the reading turn the indicator housing until the two pointers reach the zero position, by keeping the indicator body still. By so doing the relevant position (phase) between the indicator and the handwheel can be changed by a small effort, but enough to avoid any accidental phase displacement.

SC-XX

CP-XX

Housings

for position indicator, technopolymer

MATERIAL

Glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTIONS

- **SC.GXX2:** three couples of dimples on the bottom of the housing (to drill according to the type of indicator) and two supplied M4x14 countersunk head screws.
- **SC.GXX5:** two holes for supplied M4x14 countersunk head screws.

APPLICATIONS

SC-XX housings are suitable with gravity indicators on any handwheel or other control devices.

Covers

Technopolymer

MATERIAL

Polyester based (PBT) technopolymer, light grey colours, matte finish.

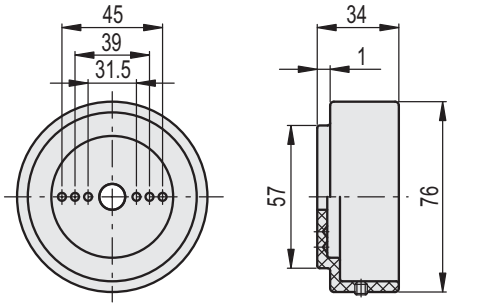
MOUNTING

Push-fit. The cover can be removed by using a screwdriver in the proper cavity.

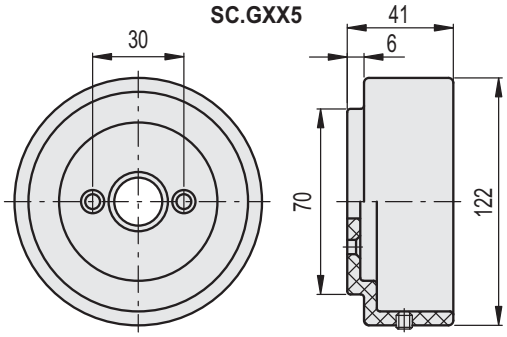
APPLICATIONS

CP-XX covers are suitable for closing the indicator housing when the indicator is not required.

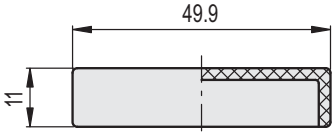
SC.GXX2



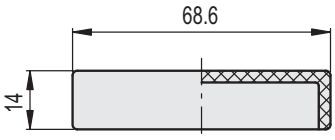
SC.GXX5



CP.X1



CP.X2



Code	Description	⚖	Handwheel indicator combinations

Digital position indicators

direct drive, 3-digit counter, technopolymer

BASE AND CASE

High-resistance polyamide based (PA) technopolymer.
Black base.
Case in the following colours:
- **C2**: RAL 2004 orange, glossy finish.
- **C3**: RAL 7035 grey, glossy finish.
- **C1**: RAL 7021 grey-black, glossy finish.

The ultrasonically welding between the base and the case prevents separation and avoids dust penetration.

WINDOW

Transparent polyamide based (PA-T) technopolymer, moulded over the case and with a perfect seal. Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DISPLAY

It indicates the displacement of the mechanism controlled by the spindle from the start position (0).
Three-digit roller counter. The digits of red rolls show the decimal values.
The display can be in different positions (see "Table of the possible combinations").
- **AN:** inclined display, counter in upper position.
- **AR:** inclined display, counter in lower position.
- **FN:** front display, counter in upper position.
- **FR:** front display, counter in lower position.

INTERNAL GASKET

O-ring front sealing in NBR synthetic rubber, between the case and the bushing.

REAR GASKET

Foam polyethylene, supplied.

STANDARD EXECUTION

Boss with Ø 10 mm H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end, included in the supply.
- **DD50**: black-oxide steel boss.
- **DD50-SST**: AISI 303 stainless steel boss.

DIRECTION OF ROTATION

- **D:** clockwise. Increasing values with clockwise rotation of the boss.
- **S:** anti-clockwise. Increasing values with anti-clockwise rotation of the boss.

WEIGHT

22 grams.

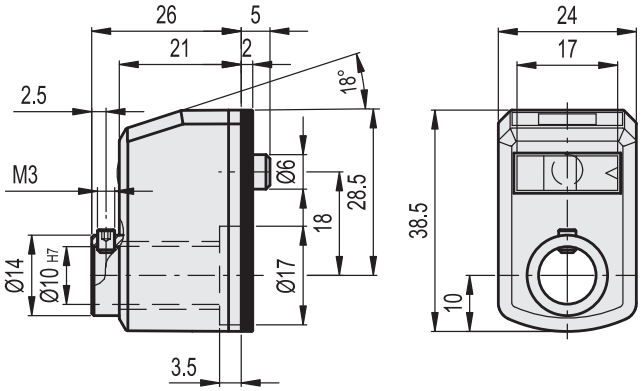
ERGONOMY AND DESIGN

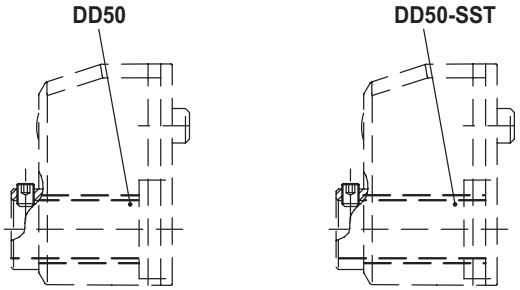
Compact roller counter, ergonomically designed digits for rapid reading. The readability of the counter is increased by the magnifying window.

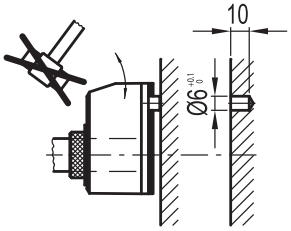
ASSEMBLY INSTRUCTIONS

1. Drill a Ø 6 mm by 10 mm hole in the body of the machine with a 18 mm centre distance from the spindle to fit the rear referring pin.
2. Set the spindle to the start or referring position.
3. Fit the indicator with the zeroed roller counter onto the spindle and make sure that the referring pin fit the hole.
4. Clamp the bushing to the spindle by tightening the grub screw with hexagon socket and cup end, according to UNI 5929-85.

ELESA Original design







DD50 | Digital position indicators

SPECIAL EXECUTIONS ON REQUEST

- Special readings after one revolution.
- Case in different colours.
- Completely sealed digital position indicators with IP 67 protection class, see table EN 60529 (on page A23) obtained by means of a brass bushing with double seal ring inside the rear cavity of the base.

FEATURES AND APPLICATIONS

Direct drive digital position indicators can be assembled on passing throught spindles in any position to give direct reading of the positioning of a machine component. They are suitable also for motor driven applications (see "Example of description for ordering").

ACCESSORIES ON REQUEST (TO BE ORDERED SEPARATELY)

- **RB50**: black-oxide steel reduction sleeves.
- **RB50-SST**: AISI 304 stainless steel reduction sleeves.

Stainless steel boss

To add only for the version with stainless steel boss

0 0 3	0 0 3	0 0 3	Pitch	Speed (rpm) *
003	00.3	0.03	0.3	1500
010	01.0	0.10	1.0	1500
020	02.0	0.20	2.0	1250
030	03.0	0.30	3.0	830
040	04.0	0.40	4.0	625
050	05.0	0.50	5.0	500
100	10.0	1.00	10	250

*The maximum rotation speed (rpm) of the spindle reported in the table corresponds to a maximum rotation of 25000 units of the last roll on the right of the counter.
Rotational speed tests have been performed in our laboratory under standard operating conditions. Small misalignments (not compromising the correct reading) of counter digits can occur due to high tolerances between gear teeth, designed to prevent damage from sudden acceleration or stop.

Digital position indicators

direct drive, 4-digit counter, technopolymer

BASE AND CASE

High-resistance polyamide based (PA) technopolymer.
Black base.
Case in the following colours:
- **C2**: RAL 2004 orange, glossy finish.
- **C3**: RAL 7035 grey, glossy finish.
- **C1**: RAL 7021 grey-black, glossy finish.

The ultrasonically welding between the base and the case prevents separation and avoids dust penetration.

WINDOW

Transparent polyamide based (PA-T) technopolymer, moulded over the case and with a perfect seal (avoid contact with alcohol during cleaning operations).

DISPLAY

It indicates the displacement of the mechanism controlled by the spindle from the start position (0).
Four-digit roller counter. The digits of red rolls show the decimal values. An additional graduated scale next to the last decimal digit offers further accuracy of reading.
The display can be in different positions (see "Table of the possible combinations").
- **AN:** inclined display, counter in upper position.
- **AR:** inclined display, counter in lower position.
- **FN:** front display, counter in upper position.
- **FR:** front display, counter in lower position.

INTERNAL GASKET

O-ring front sealing in NBR synthetic rubber, between the case and the boss.

REAR GASKET

Foam polyethylene, supplied.

STANDARD EXECUTIONS

Boss with Ø 14 mm H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end, included in the supply.
- **DD51**: black-oxide steel boss.
- **DD51-SST**: AISI 303 stainless steel boss.

DIRECTION OF ROTATION

- **D:** clockwise. Increasing values with clockwise rotation of the boss.
- **S:** anti-clockwise. Increasing values with anti-clockwise rotation of the boss.

WEIGHT

42 grams.

FEATURES AND APPLICATIONS

Direct drive digital position indicators can be assembled on passing through spindles in any position to give direct reading of the positioning of a machine component. They are suitable also for motor driven applications (see "Example of description for ordering").

ERGONOMY AND DESIGN

Compact roller counter, ergonomically designed digits for rapid reading. The readability of the counter is increased by the magnifying window.

ELESA Original design

ASSEMBLY INSTRUCTIONS

1. Drill a Ø 6 mm by 10 mm hole in the body of the machine with a 22 mm centre distance from the spindle to fit the rear referring pin.
2. Set the spindle to the start or referring position.
3. Fit the indicator with the zeroed roller counter onto the spindle and make sure that the referring pin fit the hole.
4. Clamp the bushing to the spindle by tightening the grub screw with hexagon socket and cup end, according to UNI 5929-85.

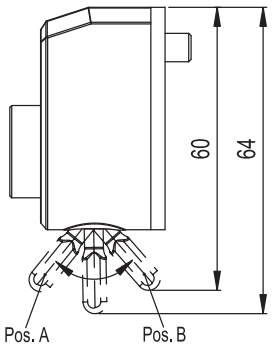
* The maximum rotation speed (rpm) of the spindle reported in the table corresponds to a maximum rotation of 25000 units of the last roll on the right of the counter.
Rotational speed tests have been performed in our laboratory under standard operating conditions.
Small misalignments (not compromising the correct reading) of counter digits can occur due to high tolerances between gear teeth, designed to prevent damage from sudden acceleration or stop.

SPECIAL EXECUTIONS ON REQUEST

- Special readings after one revolution.
- Case in different colours.
- Completely sealed digital position indicators with IP 67 protection class, see table EN 60529 (on page A23) obtained by means of a brass bushing with double seal ring inside the rear cavity of the base.

LB - LOCKING DEVICE

The DD51-LB position indicators are designed to lock the spindle on which they are mounted to avoid the risk of accidental adjustment alterations due to vibrations. To lock or unlock the spindle rotation, simply move the lever, in pos. A equivalent to unlocked spindle, in pos. B equivalent to locked spindle.
Following repeated locking cycles, the special device is highly wear resistant and functions perfectly over time.
To order the indicator with spindle locking add the –LB index after the code and description (e.g. CE.84101-LB DD51-AN-00.50-D-C3-LB).



DD51-LB - with locking device

ACCESSORIES ON REQUEST (TO BE ORDERED SEPARATELY)

- **GN 954.6**: zinc die-cast bases for spindle locking, epoxy resin coating, black colour, matte finish (see table). Type GN 302 adjustable handle. GN 954.6 locking bases allow an easy and quick locking of the spindles after their positioning. They are equipped with a Ø 6.1 mm to fit the referring pin of the indicator. They can be assembled with the handle either on the right or on the left and can be fitted to the machine by means of two M4 cylindrical head screws (not included in the supply).

DD51-E

Electronic position indicators

direct drive, 5-digit display, technopolymer

BASE AND CASE
High-resistance polyamide based (PA) technopolymer.
Black base.
Case in the following colours:
- **C2**: RAL 2004 orange, glossy finish.
- **C3**: RAL 7035 grey, glossy finish.

Available on request in RAL 7021 grey-black colour (C1).
Cover with perfectly sealed gasket and AISI 304 stainless steel UNI 6955 type self-tapping screws with six-lobe socket TORX® T06 (registered trademark by TEXTRON INC.).
The ultrasonic welding between the base and the case prevents separation and avoids dust and liquid penetration.

BOSS
AISI 304 stainless steel with Ø 14 mm H7 reamed hole, fitting to shaft by means of AISI 304 stainless steel grub screw, hexagon socket and cup end UNI 5929-85, included in the supply.

WINDOW
Transparent polyamide based (PA-T) technopolymer, moulded over the case and with a perfect seal. Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DISPLAY
- 5-digit LCD of 8,0 mm height and special characters.

The visualization parameters can be set and modified by the operator by means of appropriate keys:
- values displayed in mm, inches or degrees
- display of mode for use (absolute or incremental mode)
- reading orientation (right or reverse).

KEYBOARD
Polyester membrane. Resistant to solvents, alcohol, acids, alkalis.

INTERNAL GASKET
O-ring front sealing in NBR synthetic rubber assembled between the case and the boss.
Brass bushing with double O-ring sealing in NBR synthetic rubber inside the rear cavity of the base (DD51-E-SST-IP67).

REAR GASKET
Foam polyethylene, included in the supply.

STANDARD EXECUTIONS
- **DD51-E-SST-IP65**: completely sealed indicator with IP 65 protection class, see EN 60529 table (on page A23).
- **DD51-E-SST-IP67**: completely sealed indicator with IP 67 protection class, see EN 60529 table (on page A23), obtained by means of a brass bushing with double seal ring inside the rear cavity of the base.

ASSEMBLY INSTRUCTIONS
1. Drill a Ø 6x10 mm hole in the body of the machine with a 22 mm centre distance from the shaft to fit the rear referring pin.
2. Fit the indicator onto the shaft and make sure that the referring pin fit the hole.
3. Clamp the bushing to the shaft by tightening the grub screw with hexagon socket and cup end, according to UNI 5929-85.

ELESA Original design

ACCESSORIES ON REQUEST (TO BE ORDERED SEPARATELY)

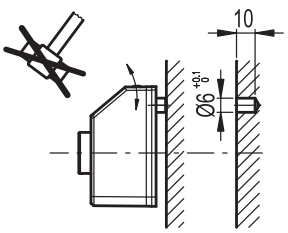
CE.95961	RB51-12-SST-304	12



DD51-E

Electronic position indicators

FEATURES AND APPLICATIONS

DD51-E position indicators, with battery power supply, can be used on passing through shafts in any position to provide the reading of the absolute or incremental positioning of a machine component.
The 5-digit display of 8,0 mm height ensures excellent readability even from a distance and from different viewing angles.
The window in transparent technopolymer protects the LCD display against accidental shocks.
The high protection degree, IP 65 or IP67, makes the indicator suitable for applications that require frequent washing, even with intense water jets.
In the operating mode, by using the 3 function keys, it is possible to select the incremental or the absolute mode, the unit of measure (mm, inches or degrees), reset the absolute counter or load a preset source value and the preset offset value.
In the programming mode, through the 3 function keys, it is possible to program the reading after one revolution of the shaft, the direction of rotation, the diplay orientation, the resolution (number of decimal digits displayed), the source value and the offset value, the max. speed of rotation and set the functions of the keys among different options available.
The internal battery ensures long battery life (over 5 years). A special symbol appears on the display when it is necessary to replace the battery. The replacement can be performed easily by removing the front cover (Fig.1), without disassembly of the indicator from the control shaft and without the loss of configuration parameters.
Further technical information available in Operating instructions.

Mechanical and electrical characteristics	
Tension feed	Lithium battery CR2450 3.0 V
Battery life	5 years
Display	5-digit LCD of 8 mm height and special characters
Reading scale	-19999; 99999
Number of decimal digits	programmable (1)
Unit of measure	mm. inches, degrees programmable (1)
Rotation max. speed	300/600/1000 r.p.m (2) programmable (1)
Precision	10.000 impulses / revolution
Protection class	IP65 or IP67
Working temperature	0 ÷ 50 °C
Storing temperature	-20 ÷ +60 °C
Relative humidity	Max. 95% at 25°C without condensation
Interference protection	IEC 61326-1 CE

(1) See the operating instructions.

(2) Default: 600 r.p.m.

Higher rotation speed to 600 r.p.m. can be mantained for short periods of time.

The value of the max. speed affects the battery life.

Cover with perfectly sealed gasket and AISI 304 stainless steel UNI 6955 type self-tapping screws with six-lobe socket TORX® T06 (registered trademark by TEXTRON INC.).
The ultrasonic welding between the base and the case prevents separation and avoids dust and liquid penetration.

BOSS

AISI 304 stainless steel with Ø 20 mm H7 reamed hole, fitting to shaft by means of AISI 304 stainless steel grub screw, hexagon socket and cup end UNI 5929-85, included in the supply.

WINDOW

Transparent polyamide based (PA-T) technopolymer, moulded over the case and with a perfect seal. Resistant to solvents, oils, greases and other chemical agents (avoid contact with alcohol during cleaning operations).

DISPLAY

- 6-digit LCD of 12,0 mm height and special characters.

The visualization parameters can be set and modified by the operator by means of appropriate keys:
- values displayed in mm, inches or degrees
- display of mode for use (absolute or incremental mode)
- reading orientation (right or reverse).

KEYBOARD

Polyester membrane. Resistant to solvents, alcohol, acids, alkalis.

INTERNAL GASKET

O-ring front sealing in NBR synthetic rubber, between the case and the boss.
Brass bushing with double O-ring sealing in NBR synthetic rubber inside the rear cavity of the base (DD52R-E-SST-IP67).

REAR GASKET

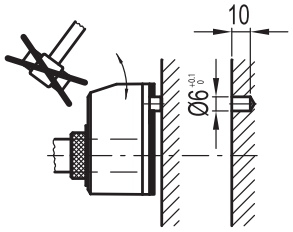
Foam polyethylene, included in the supply.

STANDARD EXECUTIONS

- **DD52R-E-SST-IP65**: completely sealed indicator with IP 65 protection class, see EN 60529 table (on page A23).
- **DD52R-E-SST-IP67**: completely sealed indicator with IP 67 protection class, see EN 60529 table (on page A23), obtained by means of a brass bushing with double seal ring inside the rear cavity of the base.

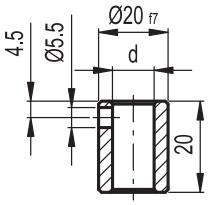
ASSEMBLY INSTRUCTIONS

1. Drill a Ø 6x10 mm hole in the body of the machine with a 30 mm centre distance from the shaft to fit the rear referring pin.
2. Fit the indicator onto the shaft and make sure that the referring pin fit the hole.
3. Clamp the bushing to the shaft by tightening the grub screw with hexagon socket and cup end, according to UNI 5929-85.



ELESA Original design

ACCESSORIES ON REQUEST (TO BE ORDERED SEPARATELY)
- **RB52-SST**: AISI 304 stainless steel reduction sleeves.



RB52-SST **STAINLESS STEEL**

DD52R-E | Electronic position indicators

FEATURES AND APPLICATIONS

DD52R-E position indicators, with battery power supply, can be used on passing through shafts in any position to provide the reading of the absolute or incremental positioning of a machine component.
The 6-digit display of 12,0 mm height ensures excellent readability even from a distance and from different viewing angles.
The window in transparent technopolymer protects the LCD display against accidental shocks.
The high protection class, IP 65 or IP67, makes the indicator suitable for applications that require frequent washing, even with water jets.
In the operating mode, by using the 4 function keys, it is possible to select the incremental or the absolute mode, the unit of measure (mm, inches or degrees), reset the absolute counter or load a preset source value and the preset offset value.
In the programming mode, through the 4 function keys, it is possible to program the reading after one revolution of the shaft, the direction of rotation, the display orientation, the resolution (number of decimal digits displayed), the source value and the offset value, the max. speed of rotation and set the functions of the keys among different options available.
The internal battery ensures long battery life (over 8 years).
A special symbol appears on the display when it is necessary to replace the battery. The replacement can be performed easily by removing the front cover (Fig.1), without disassembly of the indicator from the control shaft and without the loss of configuration parameters.
Further technical information available in Operating instructions.

Mechanical and electrical characteristics	
Tension feed	Lithium battery CR2450 3.0 V
Battery life	8 years
Display	6-digit LCD of 12 mm height and special characters
Reading scale	-199999; 999999
Number of decimal digits	programmable (1)
Unit of measure	mm. inches, degrees programmable programmable (1)
Rotation max. speed	300/600/1000 r.p.m (2) programmable (1)
Precision	10.000 impulses / revolution
Protection class	IP65 or IP67
Working temperature	0 ÷ 50 °C
Storing temperature	-20 ÷ +60 °C
Relative humidity	Max. 95% at 25°C without condensation
Interference protection	IEC 61326-1 CE

(1) See the operating instructions.

(2) Default: 600 r.p.m.

Higher rotation speed to 600 r.p.m. can be mantained for short periods of time.

The value of the max. speed affects the battery life.

Electronic position indicators

absolute reading, direct drive, technopolymer

BASE AND CASE
Polyamide based (PA) technopolymer certified self-extinguishing UL94 V-0.
Black base.
Black case, glossy finish.

DISPLAY
- Backlit LCD display showing two values: target position and current position.
- Adjustable reading (upper and lower).
- Cursor to indicate the rotation direction (clockwise/anti-clockwise) to reach the target position.
- Values displayed in mm or inches.

The visualization parameters can be set and modified by software at the installation of the machine.

FRONT MEMBRANE
Polyester. Resistant to solvents, alcohol, acids, alkali.

INTERNAL GASKET
O-ring front sealing in NBR synthetic rubber, between the case and the bushing.

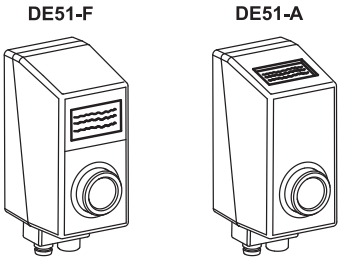
REAR GASKET
Polyurethane, supplied.

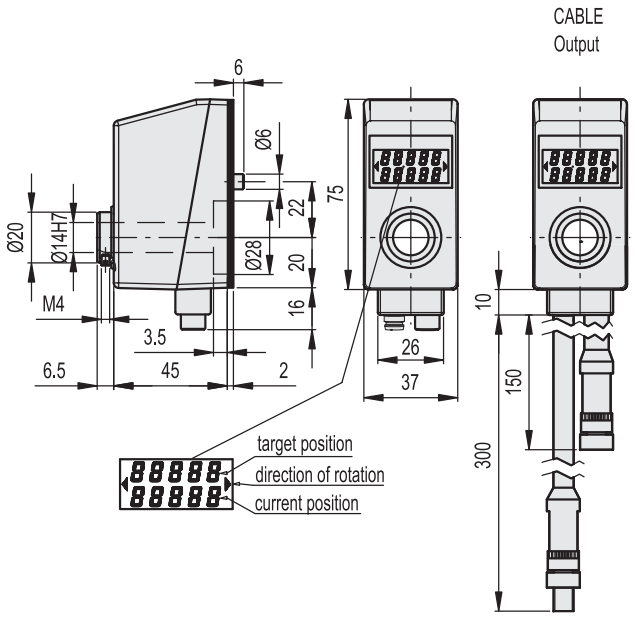
BOSS
Black-oxide steel with Ø 14 mm H7 reamed hole, fitting to shaft by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.

STANDARD EXECUTIONS
- **DE51-F:** front display, output with connectors.
- **DE51-F-Cable:** front display, output with cable and connectors.
- **DE51-A:** inclined display, output with connectors.
- **DE51-A-Cable:** inclined display, output with cable and connectors.

IP PROTECTION
Completely sealed indicator with IP 65 protection class, see EN 60529 table (on page A23).

FEATURES AND APPLICATIONS
DE51 indicators can be used on passing through spindles in any position to give absolute reading of the current position and of the target one of a machine component.
DE51 indicator is a sophisticated measuring system based on an absolute multi-turn encoder and it is not affected by magnetic fields. Therefore it is able to guarantee perfect operation, even in the presence of electric motors.
Thanks to the long-life lithium battery (more than 10 years of life-expectancy) spindle positioning variations can be registered even when the power supply is off and it prevents the loss of the preset values in case of an electrical power failure.
DE51 indicators must be networked to the central memory unit (call Elesa Customer Care) or directly to the PLC.
The connection of DE51 electronic indicators directly to the PLC of the machine functions also as a safety system. In fact, in case of mismatch for the target position of even one DE51, the PLC prevents the machine from starting working, thereby avoiding inaccurate work.





Code	Description	⚖

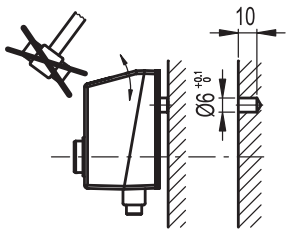
Immunity to interference	According to EN 61000-6-2
Interference emission	According to EN 61000-6-3

ASSEMBLY INSTRUCTIONS

1. Drill a Ø 6 mm by 10 mm hole in the body of the machine with a 22 mm centre distance from the spindle to fit the rear referring pin.
2. Set the spindle to the start or referring position.
3. Fit the indicator onto the spindle and make sure that the referring pin fit the hole.
4. Clamp the bushing to the spindle by tightening the grub screw with hexagon socket and cup end UNI 5929-85.
5. Network the indicator using cables with connectors type M8-4PIN (see table "Mechanical and electrical characteristics").



ACCESSORIES ON REQUEST (TO BE ORDERED SEPARATELY)

- **Connection cables** between PLC or central memory unit and DE51 or between two DE51 with different lenghts (see table)
- **Terminal resistor** to avoid noises and interferences on the net (see table)

Code	Description

- **MD51** (see page 730): polyamide based (PA) technopolymer fluted grip control knob.

Fluted grip knob for digital indicators DD51 and DE51

Technopolymer

MATERIAL
Polyamide based (PA) technopolymer, black colour, matte finish.

STANDARD EXECUTION
Plain blind hole. Fitting by means of a supplied grub screw with hexagon socket and cup end UNI 5929-85.

SELF-ADHESIVE FRONT PLATE
Matte anodised aluminium. Supplied assembled.

APPLICATIONS
MD51 knob has been designed to be mounted on direct drive digital position indicators DD51 (on page 718) or on direct drive electronic position indicators DE51 (on page 728).

SPECIAL EXECUTIONS ON REQUEST
Stainless steel grub screw.
The front plate can be customized with words, marks, graphic symbols, etc... or supplied in other colours.

ASSEMBLY INSTRUCTIONS
1. Remove the grub screw from the indicator bushing.
2. Insert MD51 knob making sure that the grub screw seat matches the tapped blind hole of the indicator bushing.
3. Screw the grub supplied with the knob, to lock simultaneously the spindle, the indicator bushing and the knob.

SPECIFICATION

TYPES

- Type **A**: Shaft-Ød2 < Bore-Ø d3
- Type **B**: Shaft-Ød2 = Bore-Ø d3

Aluminium
anodized, black

Stainless Steel-Socket set screw DIN 916
with internal hexagon and serrated point

Hub cover cap
Plastic, light grey

INFORMATION

Control knobs GN 957 are used in connection with position indicators. These control knobs offer a simple solution when the assembly requires manual fine adjustment for the application for which it has been designed.
The design of this knob adapts it to the diameter of the adjustment shaft, so that no adapter bushes RB51 are needed.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

Magnetic measuring system

Length and angle modes

FEATURES AND APPLICATIONS

MPI-15 measuring system, made of a LCD multifunction display with built-in magnetic position sensor, combined with the magnetic band M-BAND-10 (to be ordered separately), is a complete system for the measurement of linear and angular displacement (with a minimum radius of 65 mm). Characterised by an extremely easy assembly, it allows precise alignment and positioning, reducing time and machining procedures to the minimum.

Multifunction LCD with 5 function keys.

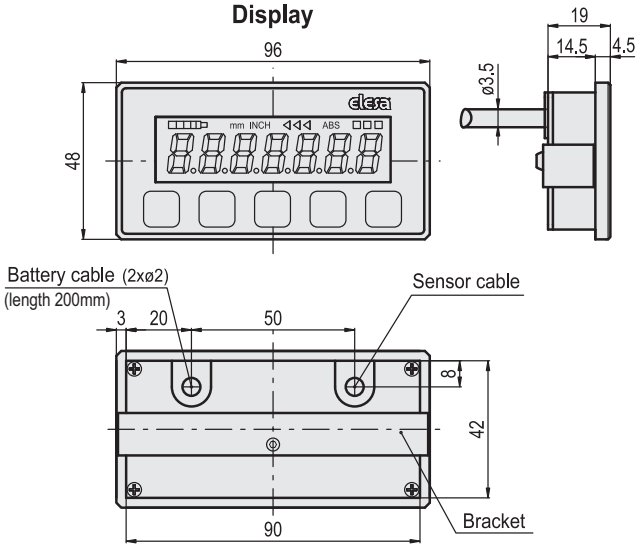
- Absolute/ incremental mode.
- Programmable offset function.
- External battery power supply 1.5 VDC.
- Buffered memory during battery substitution.
- Accidental polarity inversion protection.
- Magnetic sensor envelope material: anodized aluminium.

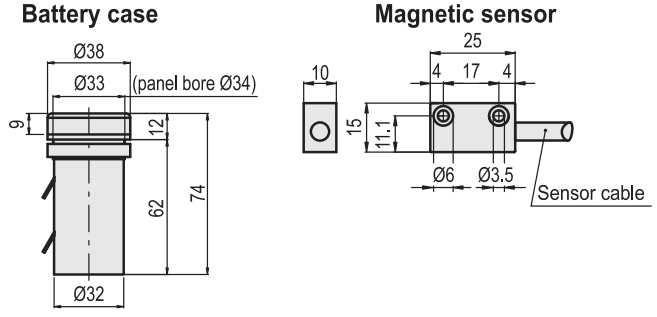
For further information read the operating instructions.

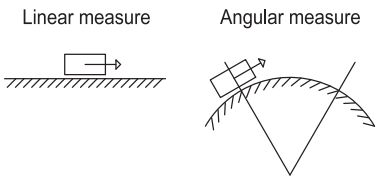
SPECIAL EXECUTIONS ON REQUEST

The special plate display may be supplied with customised graphic symbols, marks or writings.

Magnetic sensor with cable length different from the standard executions shown in the table, up to 20 m maximum.







MPI-15

Code	Description	⚖
CE.99901-#	MPI-15-#	180

Complete by specifying the sensor cable length in decimetres (10=1 meter). Minimum length 0.2 m, maximum length 2.0 m.

Example: CE.99901-06 MPI-15-06 display with sensor cable length 0.6 m.

MPI-15 Technical data	
Battery life	1.5 years (C-type battery)
Resolution(1)	0.1 mm - 0.01 in - 0.01°
Precision(2)	0.1 mm
Repeat accuracy(3)	0.001 mm
Operating speed	max. 5 m/s
Self-diagnostic	battery check, sensor check, magnetic tape check
Programmable measuring unit	millimetres, inches, degrees (angles)
Working temperature	0 ÷ 50 °C
Storing temperature	-20 ÷ +70 °C
Relative humidity	Max. 95% at 25°C without condensation
Protection class	IP40 whole device IP54 front side according to EN 60529 IP67 magnetic sensor
Interference protection	IEC 61000-4-2

(1) Resolution: the smallest change in length that the system is capable of displaying.

(2) Precision: the maximum deviation of the value measured by the system from the actual one.

(3) Repeat accuracy: the degree of closeness between a series of measures of the same sample, when the single measurements are carried out leaving the asurement conditions unchanged.

MPI-15 ASSEMBLY INSTRUCTIONS

1. Make a drilling of 42 +0.2/+0.5 mm x 90 +0.2/+0.5 mm in the metal sheet for the installation of the display.
2. Fix the display to the panel by using the specific mounting bracket (the screw is included in the supply).
3. Make a drilling of diameter 34 +0.2/+0.5 mm in the metal sheet for the installation of the battery case.
4. Fix the battery case to the panel by using the specific nut.
5. Fix the magnetic sensor by using M3 screws (not included in the supply). Distance between sensor and magnetic band to ensure a correct reading of the displacement: max 2.5 mm.

ACCESSORIES ON REQUEST

M-BAND-10: the magnetic band M-BAND-10 is made of two separate parts: the magnetic band and the cover strip. The magnetic band is made of a magnetic tape, a carrier strip and an adhesive tape (Fig.2). The cover strip is made of a protection strip and an adhesive tape (Fig.1).

ASSEMBLY INSTRUCTIONS M-BAND-10

1. The cover strip must be installed over the magnetic band to protect it against possible mechanical damages.
2. Clean the mounting surface carefully.
3. Remove the protective foil from the adhesive tape of the magnetic band.
4. Stick the magnetic band on the mounting surface.
5. Clean the mounting surface carefully.
6. Remove the protective foil from the adhesive tape of the magnetic band.
7. Stick the cover strip on the magnetic band.
8. In the absence of a seat for the housing of M-BAND-10, secure the ends of the cover strip to prevent unintentional peeling.

M-BAND-10 Technical data	
Precision	± 40 µm
Material	magnetic tape: nitrilic rubber
	carrier strip: stainless steel
	cover strip: stainless steel
	acrylic adhesive tape
Width	magnetic band: 10 mm ± 0.20 mm
	cover strip: 10 mm ± 0.20 mm
Thickness	magnetic band: 1.43 ± 0.15 mm
	cover strip: 0.23 mm
Magnetic pole pitch 5 mm	5 mm
Operating and storage temperature	-40 ÷ +100 °C
Linear thermic expansion factor	17 x 10^{-6}/K

M-BAND-10

Code	Description	Band width| [mm]	Band nominal thickness| [mm]
CE.99903-#	M-BAND-10-#	10	1.66

Complete by specifying the length in decimetres (10=1 meter). Minimum length 0.5 m, maximum length 25 m.

Example: CE.99903-15 M-BAND-10-15 magnetic band length 1.5 m.

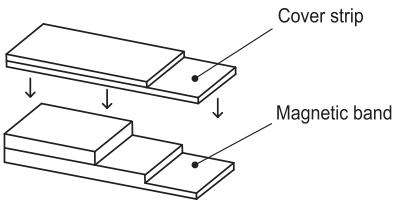
Proper assembling



Direct drive electronic position indicators

One item for all applications

The position indicators **DD51-E** (see page 724) and **DD52R-E** (see page 726) with battery power supply, can be used on passing through shafts in any position to provide the reading of the absolute or incremental positioning of a machine component.
Thanks to the available functions and to the programmable parameters, one item can be used for many applications including all shaft pitch variations, direction of rotation, unit of measure etc.

Available functions

By using the function keys, it is possible to:

- select the incremental or the absolute measure mode
- convert the linear unit of measure (mm, inches) or select the angular measure mode (degrees)
- set the source value of the absolute counter
- select the offset value

Programmable parameters

The function keys allow to program:

- the reading after one revolution of the shaft
- the direction of rotation
- the resolution (number of decimal digits)
- the diplay orientation
- the source value and the offset value
- the max. speed of rotation
- the functions of the keys among different options available

Wide display

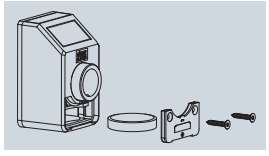
5 digit display of 8 mm (DD51-E) or **6 digit display** 12 mm (DD52R-E) height. Ensures excellent readability even from a distance and from different viewing angles. The window in transparent technopolymer protects the LCD display against accidental shocks.

High protection class

IP65 or IP67 protection class. The indicator is suitable for applications that require frequent washing, even with water jets.

Corrosion resistance

AISI 304 stainless steel bushing with Ø 14 (DD51-E) or 20 (DD52R-E) mm H7 reamed hole. High-resistance polyamide based (PA) technopolymer base and case.



Long battery life

The internal lithium battery ensures a battery **life of over 5** (DD51-E) **or 8** (DD52R-E) **years**. The battery replacement can be performed easily, without disassembly of the indicator from the control shaft and without the loss of parameter configuration.

Magnetic length and angle measuring system

The measuring system **MPI-15** (see page 732), made of a multifunction display with integrated magnetic position sensor, combined with the magnetic band **M-BAND**, is a complete system for the measurement of linear and angular displacement. Characterised by an extremely easy assembly, it allows precise alignment and positioning, reducing time and machining procedures to the minimum.

Magnetic measurement system:
- Absence of contact between moving parts
- No wear: no need of maintenance
- Not affected by moisture, dust, oils and process residues
- Insensitive to vibrations

Power supply
- External battery 1.5 VDC.
- Buffered memory during battery substitution.

Display
- Multifunction LCD with 5 function keys.
- Absolute/ incremental mode.
- Programmable measuring unit.
- Linear and angular measures.
- Programmable offset function.
- Resolution: 0.1 mm - 0.01 in -0.01°
- Precision: 0.1 mm
- Repeat accuracy: 0.01 mm

Magnetic sensor
- IP65 protection level
- Cable length up to 20 m.
- Operating speed up to 5m/s.
- Distance between sensor and magnetic band to ensure a correct reading of the displacement: 2.5 mm max.

Magnetic band
- Magnetic pole pitch 5 mm.
- Easy assembly thanks to the adhesive tape.
- Cover strip for protection against possible mechanical damages.

with rest position
Ø 3/4/5/6/8/10

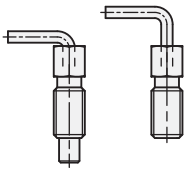
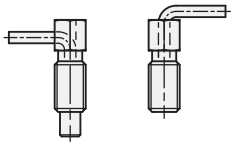
Other features:

- Guide steel, zinc plated or Stainless Steel
- Type A: with lifting ring
- Type D: with wire loop
- Standard or fine thread
- Reduced dimensions
- Reasonably priced versions

GN 7017 ... ST
GN 7017 ... NI
see page 767
Type B / BK
without rest position
Ø 4/5/6/8/10



GN 7017 ... ST
GN 7017 ... NI
see page 767
Type C / CK
with rest position
Ø 4/5/6/8/10



Other features:

- Guide steel, zinc plated or Stainless Steel
- with lever
- Reduced dimensions
- Reasonably priced versions

Indexing plungers - Types

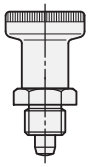
Unlocking by pulling the plunger pin

GN 413 ... ST
GN 413 ... NI
see page 768
Type A
without rest position
Ø 5/6/8/10

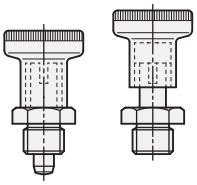
GN 413 ... ST
GN 413 ... NI
see page 768
Type C
with rest position
Ø 5/6/8/10

Other features:
- Guide steel, blackened or Stainless Steel
- Standard or fine thread
- Plunger pin Stainless Steel
- Reduced dimensions

GN 607 ... ST
GN 607 ... NI
see page 769
without rest position
Ø 6/8

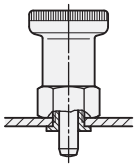


GN 607.1 ... ST
GN 607.1 ... NI
see page 769
with rest position
Ø 6/8

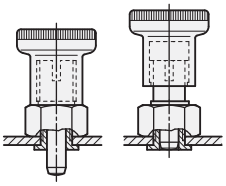


Other features:
- Guide steel, blackened or Stainless Steel
- Plunger pin, steel hardened
- High precision plunger pin guide
- Locking mechanism integrated in the knob

GN 607.2 ... ST
GN 607.2 ... NI
see page 771
without rest position
Ø 6/8

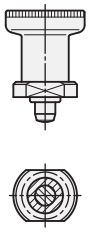


GN 607.3 ... ST
GN 607.3 ... NI
see page 772
with rest position
Ø 6/8

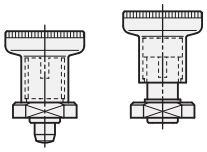


Other features:
- Designed for use in thin walled sheet metal parts
- Guide steel, zinc plated
- Plunger pin Stainless Steel
- Locking mechanism integrated in the knob

GN 607.4 ... ST
see page 773
without rest position
Ø 6/8

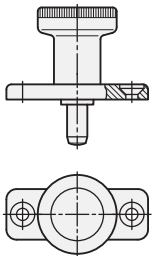


GN 607.5 ... ST
see page 774
with rest position
Ø 6/8

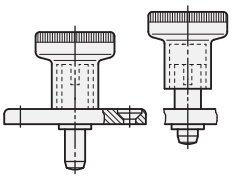


Other features:
- Plunger for welding
- Guide steel, blackened
- Plunger pin steel, hardened
- Locking mechanism integrated in the knob

GN 608
GN 608.5
see page 776
without rest position
Ø 6/8

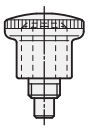


GN 608.1
GN 608.6
see page 778
with rest position
Ø 6/8

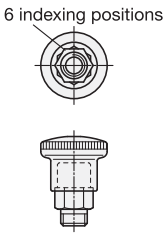


Other features:
- Guide zinc die casting, zinc plated
- GN 608/GN 608.1: Plunger pin steel, hardened
- GN 608.5/GN 608.6: Plunger pin Stainless Steel
- Locking mechanism integrated in the knob

GN 822 ... ST
GN 822 ... NI
see page 780
Type B
without rest position
Ø 4/5/6/7



GN 822 ... ST
GN 822 ... NI
see page 780
Type C
with rest position
Ø 4/5/6/7



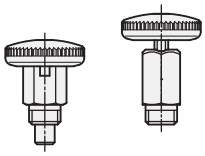
Other features:
- Smallest dimensions (indexing plungers)
- Thread without recessed stud for fastening to thin walls (sheets)
- Guide steel, zinc plated or Stainless Steel
- Plunger pin Stainless Steel
- Knob plastic
- Covered indexing mechanism

Indexing plungers - Types

Unlocking by pulling the plunger pin

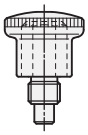
GN 822.1 ... ST
GN 822.1 ... NI
see page 782
Type B
without rest position
with low knob
Ø 4/5/6/7

GN 822.1 ... ST
GN 822.1 ... NI
see page 782
Type C
with rest position
with low knob
Ø 4/5/6/7



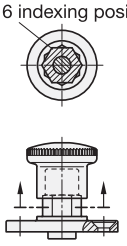
Other features:
- Smallest dimensions (indexing plungers)
- Thread without recessed stud for fastening to thin walls (sheets)
- Guide steel, zinc plated or Stainless Steel
- Plunger pin Stainless Steel
- Knob plastic
- open indexing mechanism

GN 822.6
GN 822.7
see page 775
Type B / BN
without rest position
Ø 4/5/6/7/8/10



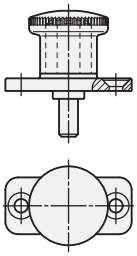
GN 822.6
GN 822.7
see page 775
Type C / CN
with rest position
Ø 4/5/6/7/8/10

6 indexing positions



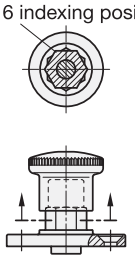
Other features:
- Smallest dimensions (indexing plungers)
- Guide steel, zinc plated or Stainless Steel
- Stainless Steel version with plastic or Stainless Steel knob
- Plunger pin Stainless Steel
- Standard or fine thread

GN 822.8
GN 822.9
see page 786
Type B / BN
without rest position
Ø 4/5/6/ 8/10



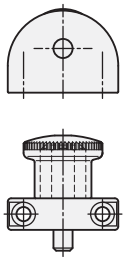
GN 822.8
GN 822.9
see page 786
Type C /CN
with rest position
Ø 4/5/6/ 8/10

6 indexing positions



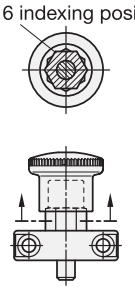
Other features:
- Reduced dimensions
- Guide zinc die casting, black plastic coated or Stainless Steel (GN 822.9)
- Plunger pin Stainless Steel
- Stainless Steel version (GN 822.9 with plastic or Stainless Steel knob)

GN 412
see page 789
Type B
without rest position
Ø 5/6 /8 /10



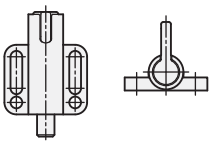
GN 412
see page 789
Type C
with rest position
Ø 5/6/8/10

6 indexing positions

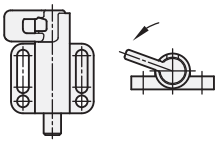


Other features:
- Short length
- Mounting from the front or rear (female thread)
- Guide zinc die casting, black plastic coated
- Plunger pin Stainless Steel
- Mounting blocks GN 412.1

GN 416
see page 790
Type S
without locking
in normal position
without rest position
Ø 6 / 8 / 10 / 12



GN 416
see page 790
Type L1 / R1
with locking
in normal position
with rest position
Ø 6/8/10/12

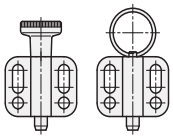


Other features:
- Guide zinc die casting, black plastic coated
- Plunger pin steel, zinc plated
- Latch lever plastic
- Operation beyond the plunger axis
- Assembly sets for profile systems
- Type L1/R1: Locking via clockwise or counterclockwise rotation of the latch lever
- Locators GN 416.1

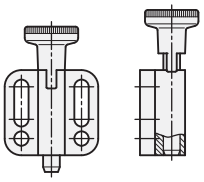
Indexing plungers - Types

Unlocking by pulling the plunger pin

GN 417
see page 792
Type A / B
without rest position
Ø 4/5/6/8/10

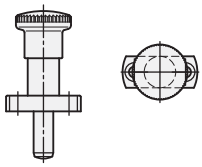


GN 417
see page 792
Type C
with rest position
Ø 4/5/6/8/10

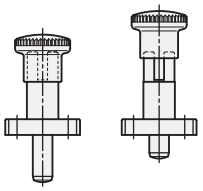


Other features:
- Indexing plungers for welding
- Guide steel, blackened
- Plunger pin steel, hardened
- Locking mechanism integrated in the knob

GN 817.3
see page 795
Type B
without rest position
Plunger pin
cylindrical
Ø 6/8/10

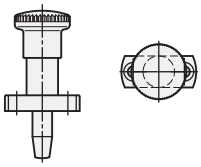


GN 817.3
see page 795
Type C
with rest position
Plunger pin
cylindrical
Ø 6/8/10

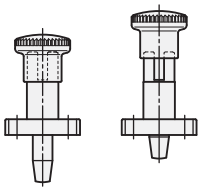


Other features:
- Designed for precision positioning by using positioning bushings
- Guide steel, blackened
- Plunger pin hardened
- Locking mechanism integrated in the knob
- reduced dimensions

GN 817.5
see page 796
Type B
without rest position
Plunger pin conical
Ø 6/8/10

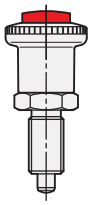


GN 817.5
see page 796
Type C
with rest position
Plunger pin conical
Ø 6/8/10



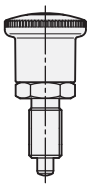
Other features:
- Designed for precision positioning by using positioning bushings
- Guide steel, blackened
- Plunger pin hardened
- Locking mechanism integrated in the knob
- reduced dimensions

GN 414
GN 414 ... NI
see page 797
with safety lock
Ø 6/8/10



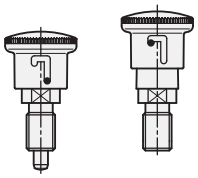
Other features:
- The latching is done automatically in case of a protruding plunger pin and the unlocking using the push-button
- Guide steel, blackened or Stainless Steel
- Plunger pin, steel hardened
- Knob black, push-button red

GN 414.1
GN 414.1 ... NI
see page 802
with rest position
Ø 6/8/10

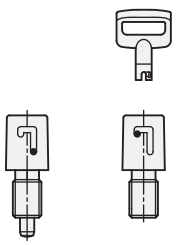


Other features:
- The rest position is achieved automatically in case of a retracted plunger pin and the unlocking using the push-button
- Guide steel, blackened or Stainless Steel
- Plunger pin, steel hardened
- Knob black, push-button red

GN 816
see page 798
Type A
Plunger pin
in normal position
protruded
with rest position
Operation with knob
Ø 6/8/10



GN 816
see page 798
Type B
Plunger pin in normal
position protruded
with rest position
Operation with key
Ø 6/8/10

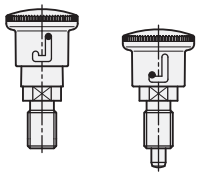


Other features:
- Rest position secured against unintended release
- Guide steel, zinc plated
- Plunger pin Stainless Steel AISI 303
- Type B: Operation possible only with special key GN 816-10 (safety function)

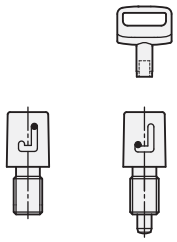
Indexing plungers - Types

Unlocking by pulling the plunger pin

GN 816.1
see page 800
Type A
Plunger pin
in normal position
retratcted
with locking
Operation with knob
Ø 6/8/10

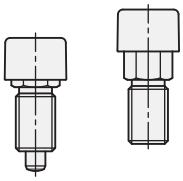


GN 816.1
see page 800
Type B
Plunger pin
in normal position
retratcted
with locking
Operation with key
Ø 6/8/10



Other features:
- Latch secured against unintended release
- Guide steel, zinc plated
- Plunger pin Stainless Steel AISI 303
- Type B: Operation possible only with special key GN 816.1-10 (safety function)

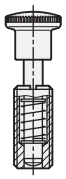
GN 514
see page 803
with PUSH-PUSH
mechanism
Ø 6/8



Other features:
- The plunger pin is moved over a so-called 'heart-curve'. This causes the plunger pin to be extended as well as retracted only by pressing the actuation buttons.
- Guide steel, blackened
- Knob plastic

GN 313 ... ST
GN 313 ... NI
see page 804
Plunger pin
in normal position
retratcted
Type A: with knob
Ø 5/6/8/10

INOX STAINLESS STEEL

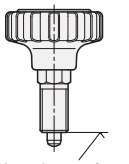


GN 313 ... ST
GN 313 ... NI
see page 804
Plunger pin
in normal position
retratcted
Type D: without knob
Ø 5/6/8/10

INOX STAINLESS STEEL

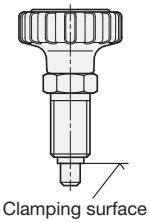
Other features:
- In the normal position (non-actuated), the bolt is not protruding, i.e. it remains retracted by a thrust spring
- Guide steel, blackened or Stainless Steel
- Plunger pin Stainless Steel

GN 7336.7
see page 806
Clamping knobs
with plunger pin
Ø 5/6/8



Other features:
- Knurled screw with "integrated" spring plunger pin. Thus, elements to be adjusted can be positioned and clamped simultaneously
- Guide steel, blackened
- Plunger pin Stainless Steel
- Knurled knob plastic

GN 7336.8
see page 807
Clamping
indexing plungers
Ø 6/8

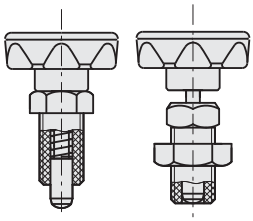


Other features:
- Application like GN 7336.7 with additional safety function. Knurled screw does not help in clamping, but in positioning. The clamping is done using a plunger pin that is connected to an anti-twist knurled knob.

After releasing the clamping, the plunger pin cannot be retracted (safety feature!), but only after some rotations of the knurled knob
- Guide steel, zinc plated
- Plunger pin steel, nitrided
- Knurled knob plastic

PMT.110
see page 808
Indexing plunger
with knob
Ø 8/10

INOX STAINLESS STEEL | SUGRA TECHNO POLYMER



Other features:
- SUPER-technopolymer threaded body. Lightness and high mechanical strength
- Steel (hardened) or Stainless Steel plunger pin
- Anticorrosive material: suitable even in the presence of liquid or humidity
- Low friction factor to the plunger stroke; no lubricating maintenance is required
- Resistant to several cleaning cycles with solvents and other chemical agents

Indexing plungers

Steel / Stainless Steel without rest position

SPECIFICATION

Types

- Type **A**: with Plastic Knob, without lock nut
- Type **AK**: with Plastic-Knob, with lock nut
- Type **AN**: with Stainless Steel-Knob, without lock nut
- Type **AKN**: with Stainless Steel-Knob, with lock nut
- Type **G**: with threaded rod, without lock nut
- Type **GK**: with threaded rod, with lock nut

Version in Steel

- blackened
- Pin hardened

Version in Stainless Steel AISI 303 NI

Pin chemically nickel plated

Knob Type A / AK

- Plastic (Polyamide PA)
- black, matt
- not removable

Knob Type AN / AKN

- Stainless Steel AISI 303
- not removable

INFORMATION

Type G or GK of the GN 617 indexing plungers have been designed for applications where the indexing plunger is not operated with the standard knob.
The indexing plungers are designed such that the plunger set in the end position (spring is "on block") can also absorb axial forces. For applications in which these forces are substantially above the tensile force applied by the operator (Type G), GN 817 (see page 754) indexing plungers are to be preferred.

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

- Plastic (Polyamide PA)
- black, matt
- not removable

Knob Type AN / AKN

- Stainless Steel AISI 303
- not removable

INFORMATION

Indexing plungers GN 617.1 with rest position are used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Indexing plungers

Steel / Stainless Steel without rest position

SPECIFICATION

Types

- Type **A**: with Plastic-Knob, without lock nut
- Type **AK**: with Plastic-Knob, with lock nut
- Type **AN**: with Stainless Steel-Knob, without lock nut
- Type **AKN**: with Stainless Steel-Knob, with lock nut
- Type **G**: with threaded rod, without lock nut
- Type **GK**: with threaded rod, with lock nut

Steel

- blackened
- Pin hardened

Stainless Steel AISI 303 **NI**
Pin chemically nickel plated

Knob Type A / AK

- Plastic (Polyamide PA)
- black, matt
- not removable

Knob Type AN / AKN

- Stainless Steel AISI 303
- not removable

INFORMATION

Type G or GK of the GN 613 indexing plungers have been designed for applications where the indexing plunger is not operated with the standard knob.
The indexing plungers are designed such that the plunger set in the end position (spring is "on block") can also absorb axial forces. For applications in which these forces are substantially above the tensile force applied by the operator (Type G), GN 817 (see page 754) indexing plungers are to be preferred.
A special screw driver GN 613.1 is available. Two slots are provided in the upper end of the body which are accessible with the knob in its retracted position.

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Indexing plungers

SUPER-technopolymer body

THREADED BODY
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.

PLUNGER
Black-oxide hardened steel or AISI 303 stainless steel.
Suggested tolerance for matching hole = H7.

KNOB
High-resilience polyamide based (PA) technopolymer, black colour or RAL 3000 red colour (C6), matte finish.

SPRING
AISI 302 stainless steel.

LOCKING NUT (NTT)
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.
Available also as accessory sold separately (see table NTT).

STANDARD EXECUTIONS
- **PMT.100-A:** black-oxide steel plunger, without locking nut.
- **PMT.100-AK:** black-oxide steel plunger, with locking nut (supplied not assembled).
- **PMT.100-SST-A:** AISI 303 stainless steel plunger, without locking nut, not magnetic.
- **PMT.100-SST-AK:** AISI 303 stainless steel plunger, with locking nut (supplied not assembled), not magnetic.

FEATURES AND APPLICATIONS
- Lightness and high mechanical resistance of the product.
- The SUPER-technopolymer threaded body of the plunger offers a low friction factor to the plunger stroke; no lubricating maintenance is required.
- Anticorrosive material: suitable even in the presence of liquid or humidity (PMT.100-SST).
- Resistant to several cleaning cycles with solvents and other chemical agents, for this reason they are suitable for applications as in the pharmaceutical or food industry.

ASSEMBLY INSTRUCTIONS
Make sure that no machining residues are left on the threaded hole for the assembly of PMT.100 indexing plunger (see fig. 1). Do not make any chamfering in the hole (see fig. 2).
SUPER-technopolymer product based on ELESA technology, dimensions according to GN 617 (see page 744) standards as agreed with Otto Ganter GmbH Co. KG.

ANOTHER STANDARD EXECUTION
PMT.101: (see page 752) indexing plungers with rest position.

Index C6: indexing plunger with RAL 3000 red colour knob.

***** Spring preload

Spring maximum load

Indexing plungers

Rest position, SUPER-technopolymer body

THREADED BODY
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.

PLUNGER
Black-oxide hardened steel or AISI 303 stainless steel.
Suggested tolerance for matching hole = H7.

KNOB
High-resilienceolyamide based (PA) technopolymer, black colour or RAL 3000 red colour (C6), matte finish.

SPRING
AISI 302 stainless steel.

LOCKING NUT NTT
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.
Available also as accessory sold separately (see table NTT).

STANDARD EXECUTIONS
- **PMT.101-A:** black-oxide steel plunger, without locking nut.
- **PMT.101-AK:** black-oxide steel plunger, with locking nut (supplied not assembled).
- **PMT.101-SST-A:** AISI 303 stainless steel plunger, without locking nut, not magnetic.
- **PMT.101-SST-AK:** AISI 303 stainless steel plunger, with locking nut (supplied not assembled), not magnetic.

FEATURES AND APPLICATIONS
- Lightness and mechanical resistance of the product.
- The SUPER-technopolymer threaded body of the plunger offers a low friction factor to the plunger stroke; no lubricating maintenance is required.
- Anticorrosive material: suitable even in the presence of liquid or humidity (PMT.101-SST).
- Resistant to several cleaning cycles with solvents and other chemical agents, for this reason they are suitable for applications as in the pharmaceutical or food industry.
- The stop toothing (for the rest position), made out of SUPER-technopolymer, protects the device from seizure or wear.

ASSEMBLY INSTRUCTIONS
Make sure that no machining residues are left on the threaded hole for the assembly of PMT.101 indexing plunger (see fig. 1). Do not make any chamfering in the hole (see fig. 2).
SUPER-technopolymer product based on ELESA technology, dimensions according to GN 617 (see page 744) standards as agreed with Otto Ganter GmbH Co. KG.

ANOTHER STANDARD EXECUTION
PMT.100: (see page 750) indexing plungers without rest position.

Index C6: indexing plunger with RAL 3000 red colour knob.

***** Spring preload

Spring maximum load

Indexing plungers

Steel / Stainless Steel, with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position, without lock nut
- Type **BK**: without rest position, with lock nut
- Type **C**: with rest position, without lock nut
- Type **CK**: with rest position, with lock nut
- Type **G**: with threaded rod, without lock nut
- Type **GK**: with threaded rod, with lock nut

Steel

- blackened
- Pin hardened

Stainless Steel AISI 303 **NI**
Pin chemically nickel plated

Knob Plastic (Polyamide PA)

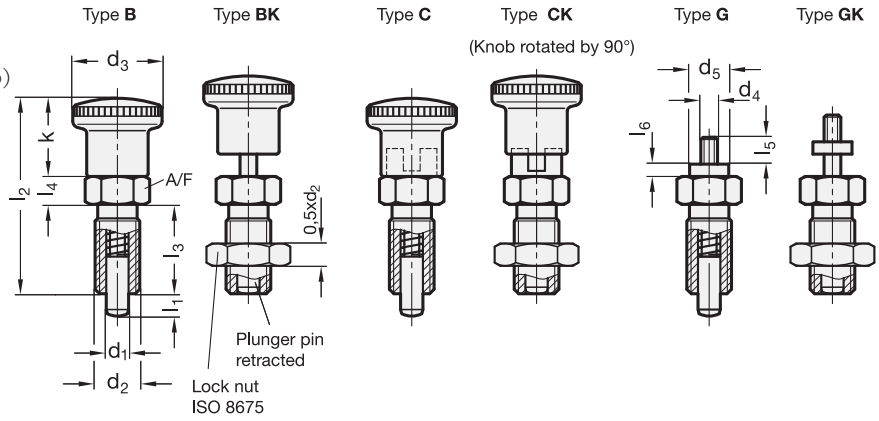
- black, matt
- red **RT** RAL 3000 (add RT on order code)
- not removable

INFORMATION

Indexing plungers GN 817 with rest position (Type C / CK) are used for such applications where the plunger has to stay in its rectracted position.
To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)



*Complete with type index of the Indexing plungers (B, BK, C, CK, G or GK)

Weight type B

Indexing plungers

Steel / Stainless Steel, removable, with or without rest position

SPECIFICATION

Types

- Type **B**: without rest position, without lock nut
- Type **BK**: without rest position, with lock nut
- Type **C**: with rest position, without lock nut
- Type **CK**: with rest position, with lock nut

Version in Steel ST

blackened

- Threaded body
- Lock nut

Version in Stainless Steel NI

- Threaded body, AISI 303
- Lock nut, AISI 304

Pin
Stainless Steel AISI 303

Countersunk screw DIN 7991
Stainless Steel AISI 304

Knob

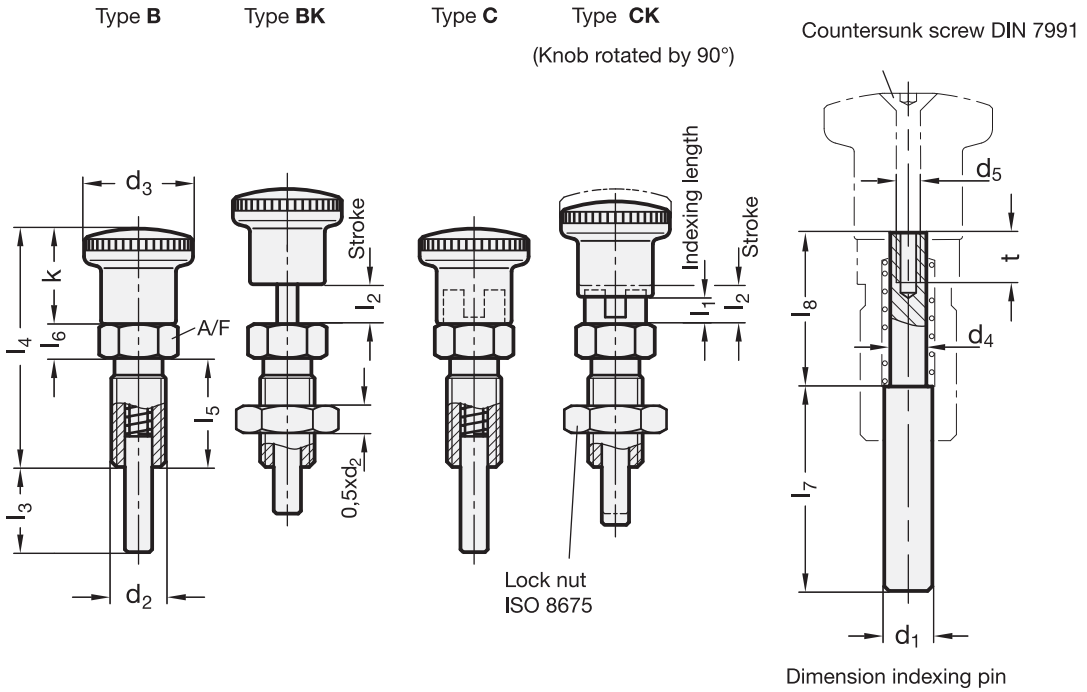
- Plastic (Polyamide PA)
- black, matt

INFORMATION

Indexing plungers GN 817.8 have been designed such that special versions of the indexing pins can also be made economically in smaller unit quantities.
If reqired, the indexing pins can be machined or made by the user as shown in the drawing above. They are assembled with a countersunk screw and can therefore be assembled several times. All parts are supplied in a non-assembled set.
The indexing plungers type C / CK are used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)



*Complete with type index of the Indexing plungers (B, BK, C or CK)

Indexing plungers

without thread, without rest position

SPECIFICATION

Types

- Type **A**: with knob
- Type **G**: with threaded rod

Steel

- weldable
- blackened
- Pin hardened

Knob Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Indexing plungers GN 618 without thread are for applications where welding, resin bonding (Loctite) or clamping is favoured.
Type G has been designed for applications where the indexing plunger is not operated with the standard knob.
The indexing plungers are designed such that the plunger set in the end position (spring is "on block") can also absorb axial forces. For applications in which these forces are substantially above the tensile force applied by the operator (Type G), additional information can be submitted on request.

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Plastic characteristics (see page A2)

Indexing plungers

Steel / Stainless Steel, with T-Handle, with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position, without lock nut
- Type **BK**: without rest position, with lock nut
- Type **C**: with rest position, without lock nut
- Type **CK**: with rest position, with lock nut

Version in Steel

- blackened
- Pin hardened and grounded

Version in Stainless Steel NI

- AISI 303
- Pin chemically nickel plated

T-Handle
Plastic Polyamide (PA)

- not removable
- black, matt

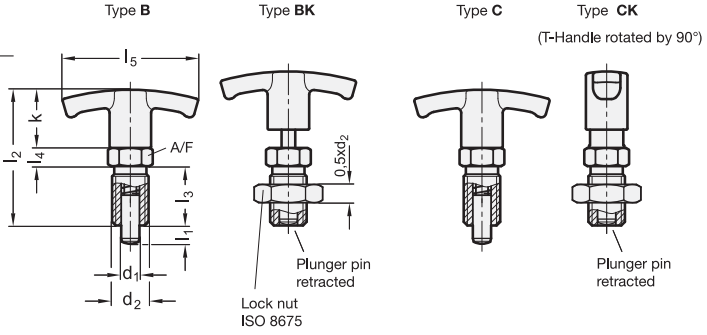
INFORMATION

Indexing plungers GN 817.4 are similar to GN 817 (see page 754) but with a T-handle instead of a round head.
This shape allows better visual orientation of the indexing position of Type C and is advantageouse when greater unlocking forces occur.
Type C with rest position is used in such applications where the plunger must not protrude continually. In that case the knob is retracted and afterwards turned by 90°. A notch keeps the plunger in this position.

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)



*Complete with type index of the Indexing plungers (B, BK, C or CK)

INFORMATION

Indexing plungers GN 817.9 have been designed such that special versions of the indexing pins can also be made economically in smaller unit quantities.
If reqired, the indexing pins can be machined or made by the user as shown in the drawing above. They are assembled with a countersunk screw and can therefore be assembled several times. All parts are supplied in a non-assembled set.
The indexing plungers type C are used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.

- not removable

INFORMATION

GN 717 Indexing plungers are characterized by small dimensions. These indexing plungers are universally applicable due to their prevention of misalignments and positioning errors of the mating indexing bores.
The type C / CK with rest position are used for such applications where the plunger has to stay in its retracted position.
During assembly, the max. tightening torques shown in the table should not be exceeded when securing the lock nut.
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Indexing plungers

Steel / Stainless Steel, with lever, with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position, without locknut
- Type **BK**: without rest position, with locknut
- Type **C**: with rest position, without locknut
- Type **CK**: with rest position, with locknut

- Version in Steel zinc plated, blue passivated **ST**
- Version in Stainless Steel AISI 303 **NI**

Spring
Stainless Steel AISI 301

INFORMATION

GN 7017 indexing plungers are activated through a lever and are characterized by small dimensions. These indexing plungers are universally applicable due to their prevention of misalignments and positioning errors of the mating indexing bores.
The type C / CK with rest position are used for such applications where the plunger has to stay in its retracted position.
During assembly, the max. tightening torques shown in the table should not be exceeded when securing the lock nut
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Load rating information (see page A42)

Guide (Threaded socket)
Version in Stainless Steel AISI 303 **NI**

Pin
Stainless Steel AISI 303
chemically nickel plated

Spring / Lifting ring
Stainless Steel AISI 301

INFORMATION

Owing to its shape, the lifting ring of the indexing plungers GN 413 can be used both as a screw-in assist during assembly or as indexing lock (Type C / Type CK).
Indexing plungers with rest position are used when the indexing pin is temporarily not allowed to protrude. After the pin is pulled in, turn the pull ring by 90°. The ring is held in position by an indexing notch.

TECHNICAL INFORMATION

INFORMATION

Indexing plungers GN 607.1 with rest position are used for such applications where the plunger has to stay in its rectracted position. To achieve this, the knob is roated by 90° degrees after being rectracted. A notch keept the plunger in this position.
Indexing plungers GN 607.1 are distinguished for their small dimensions. The extremely low luck nuts GN 909 (see page 809) / GN 909.5 (see page 809) enlarge the mounting options. The locking tab is an integral part of the knob thus giving reliable operations at all times.

- Range of indexing plungers (see page 738)

GN 607.2

Indexing plungers

for installation in thin walled equipment, without rest position

SPECIFICATION

Guide Steel **ST**
zinc plated, blue passivated

Pin Stainless Steel AISI 303
chemically nickel plated

Knob Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Indexing plungers GN 607.2 have been developed for installation in thin walled equipment.
It has to be taken into consideration that, depending on the mounting plate thickness 's', the protruding plunger length 'l1' and the position of the hexagon nut on its centre bush, the plunger nose might not always be fully retractable.
For design reasons the positional accuracy of this indexing plunger is not as precise as plunger GN 607 (see page 769).

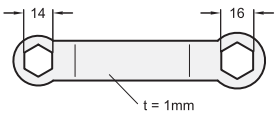
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

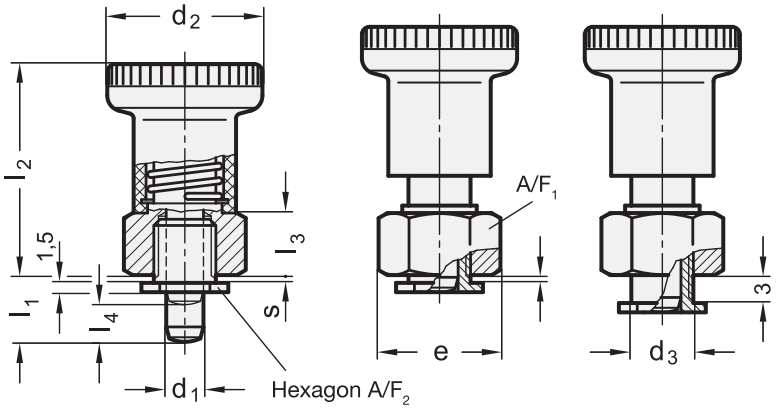
- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

ACCESSORY

- Double ring spanner GN 607.9 -SW14-SW16 (assembling aid)



Plunger pin retracted



Assembly instruction

GN 607.3

Indexing plungers

for installation in thin walled equipment, with rest position

SPECIFICATION

Guide Steel **ST**
zinc plated, blue passivated

Pin Stainless Steel AISI 303
chemically nickel plated

Knob Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Indexing plungers GN 607.3 have been developed for installation in thin walled equipment.
It has to be taken into consideration that, depending on the mounting plate thickness 's', the protruding plunger length 'l_1' and the position of the hexagon nut on its centre bush, the plunger nose might not always be fully retractable.
For design reasons the positional accuracy of this indexing plunger is not as precise as plunger GN 607 (see page 769).
Indexing plungers with rest position are used for such applications where the plunger pin has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.

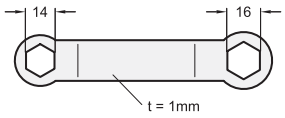
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

ACCESSORY

- Double ring spanner GN 607.9 -SW14-SW16 (assembling aid)



Plunger pin retracted

GN 607.4

Indexing plungers

for welding, without rest position

SPECIFICATION

Steel **ST**

- blackened
- Pin hardened

Knob Plastic (Polyamide PA)

- black, matt
- not removable

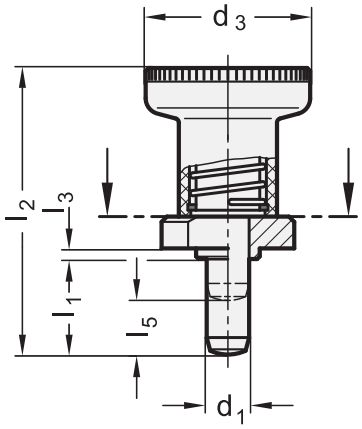
INFORMATION

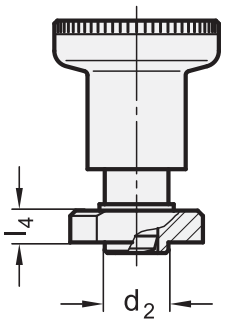
Indexing plungers GN 607.4 are designed for welded fixing, in particular for use in steel square tubings.
The lug d_2 is intended for positioning.
The plastic knob with the in-moulded indexing pin is driven on after the welding process.

- Range of indexing plungers (see page 738)

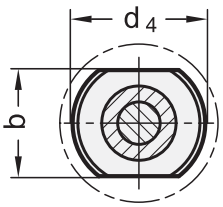
TECHNICAL INFORMATION

- Plastic characteristics (see page A2)

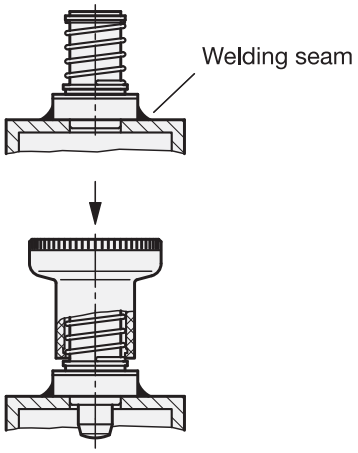




Plunger pin retracted
(if $l_1 = d_1$)



Assembly instruction



To prevent damage of the plastic knob, it will be driven onto the shaft using a plastic mallet, after the welding process.

GN 607.4

Indexing plungers

for welding, with rest position

SPECIFICATION

Steel **ST**

- blackened
- Pin hardened

Knob Plastic (Polyamide PA)

- black, matt
- not removable

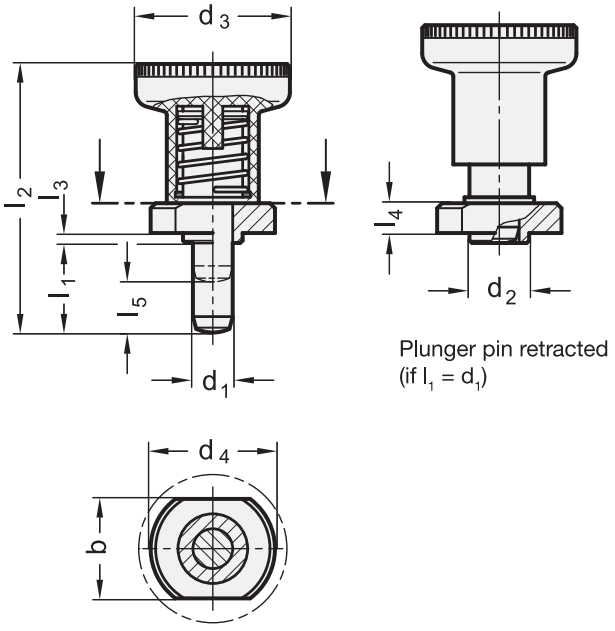
INFORMATION

Indexing plungers GN 607.5 with rest position are used in cases where the indexing pin is temporarily not allowed to protrude. After pulling out, the knob is turned by 90°.
A notch keeps the plunger in this position.
The GN 607.5 indexing plungers are intended for welded fixing, in particular for use in steel square tubings.
The lug d_2 is intended for positioning.
The plastic knob with the in-moulded indexing pin is driven on after the welding process.

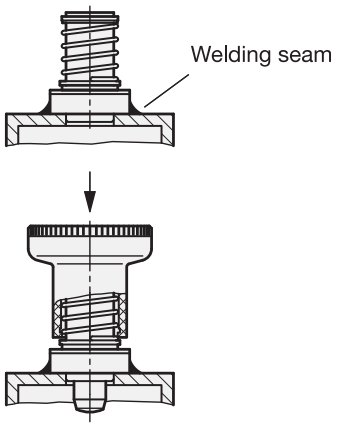
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Load rating information (see page A42)



Assembly instruction



To prevent damage of the plastic knob, it will be driven onto the shaft using a plastic mallet, after the welding process.

GN 822.6

Mini indexing plungers

with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position
- Type **C**: with rest position

Guide Steel zinc plated, blue passivated

Pin
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

Knob Plastic (Polyamide PA)

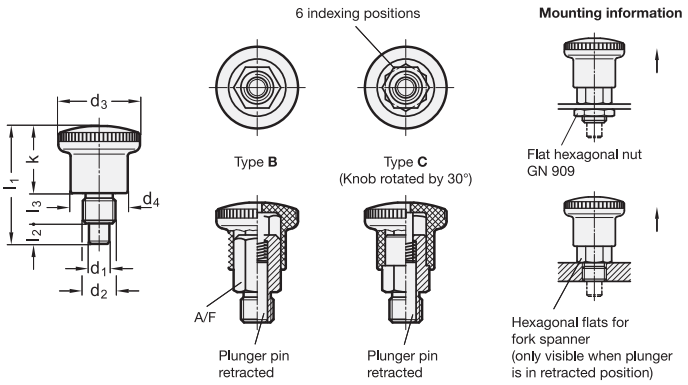
- black, matt
- not removable

INFORMATION

Mini indexing plungers GN 822.6 are distinguished for their small dimensions.
Based on the principle of the GN 822 (see page 780) mini indexing plungers, this model combines their clever type of construction with a complete series of all current sizes of bolts and threads. They provide a reasonably priced alternative to the GN 607 (see page 769) / GN 607.1 (see page 770) indexing plungers of the appropriate sizes.
To mount, first turn the mini indexing plunger in with the knurled button. Pulling the indexing pin will release the hexagon nut which can then be tightened with an open-end spanner.
They are inserted into position by holding them by the serrated knob. The spanner flats on the lock nut are revealed when retracting the pin, so that the mini indexing plunger can be easily tightened by means of a fork spanner.
In type C, the button can be turned by 30° after retracting the indexing pin, holding it in the "retraced" position using the indexing lock.
- Range of indexing plungers (see page 738)

ACCESSORY

Distance bushings GN 609.5 (see page 810) or flat hexagonal nuts GN 909 (see page 809) are to be ordered seperately.



* Complete with type index of the Mini indexing plungers (B or C)

Mini indexing plungers

Steel / Stainless Steel, opening indexing mechanism, with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position
- Type **C**: with rest position

Version in Steel ST

zinc plated, blue passivated

Version in Stainless Steel AISI 303 NI

Pin
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

Knob Plastic (Polyamide PA)

- black, matt
- red, RAL 3000 **RT**
- not removable

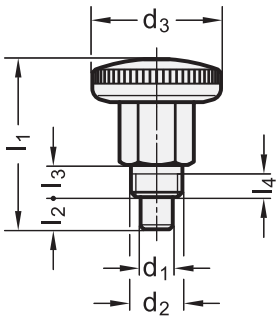
INFORMATION

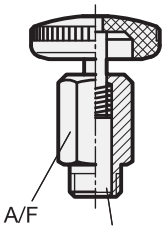
Mini indexing plungers GN 822.1 are distinguished for their small dimensions. They have been designed for installation in thin walled sheet metal constructions.
Type C with rest position is used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

Type **B**





Type **C**

(Knob rotated by 90°)

- matt blasted
- not removable

INFORMATION

Mini indexing plungers GN 822.7 are distinguished for their small dimensions.
Based on the principle of the GN 822 (see page 780) mini indexing plungers, this model combines their clever type of construction with a complete series of all current sizes of bolts and threads. They provide a reasonably priced alternative to the GN 607 (see page 769) / GN 607.1 (see page 770) indexing plungers of the appropriate sizes.
To mount, first turn the mini indexing plunger in with the knurled button. Pulling the indexing pin will release the hexagon nut which can then be tightened with an open-end spanner.
The spanner flats on the lock nut are revealed when retracting the pin, so that the mini indexing plunger can be easily tightened by means of a fork spanner.
In types C and CN, the button can be turned by 30° after retracting the indexing pin, holding it in the "retraced" position using the indexing lock.

- Range of indexing plungers (see page 738)

ACCESSORY

Distance bushings GN 609.5 (see page 810) or flat hexagonal nuts GN 909.5 (see page 809) are to be ordered seperately.

GN 412

Indexing plungers

with and without rest position

SPECIFICATION

Types

- Type **B**: without rest position
- Type **C**: with rest position

Identification no.

- No. **1**: Mounting from the front
- No. **2**: Mounting from the back

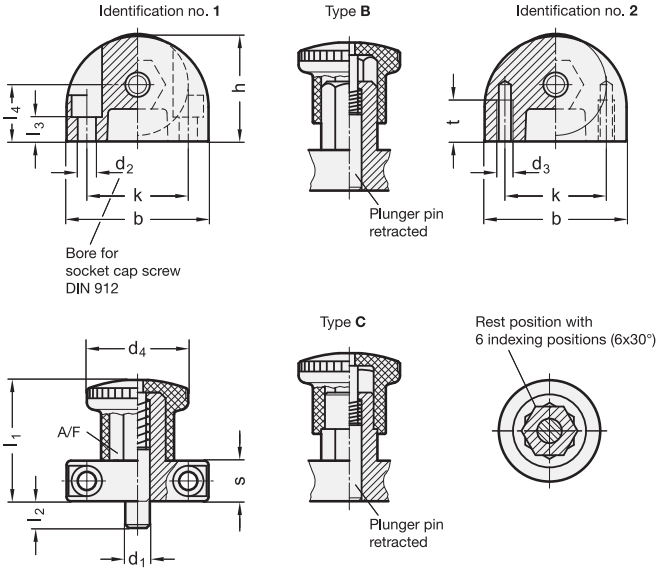
Guide
Zinc die casting
plastic coated
black, textured finish

Pin
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

Knob
Plastic (Polyamide PA)

- black, matt finish
- not removable



INFORMATION

The outstanding feature of the indexing plungers GN 412 is their compact design. They are mounted either from the front with cylinder head screws or from the back through threads. In Type C, the knob can be turned by 30° after retracting the indexing pin, holding it in the "retracted" position by means of the indexing lock.
The dimensions and connection measurements match the combination with GN 412.1 (see page 814) mounting blocks in connection with positioning bushings GN 412.2 (see page 813) or GN 412.3 (see page 812).

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Stainless Steel characteristics (see page A26)

Spring latches

SPECIFICATION

Types

- Type **S**: with locking, without rest position
- Type **L1**: Locking / Rest position via counterclockwise rotation
- Type **R1**: Locking / Rest position via clockwise rotation

Guide
Zinc die casting
plastic coated, RAL 9005, textured finish

Plunger pin
Steel
zinc plated, blue passivated

Spring
Stainless Steel AISI 301

Latch lever
Plastic, Technopolymer (Polyamide PA)

- black, matte
- not removable

INFORMATION

The plunger of spring latches GN 416 is operated by an axial pulling of the latch lever. This kind of operation from the top side is advantageous in certain installation situations.
The pins of Type S spring latches are engaged in the housing to prevent rotation, and therefore lock in the starting position but not the retracted position. Types R1 and L1 spring latches offer a locking function in the starting as well as in the retracted position, preventing an unintentional operation. A lock notch holds the latch lever in both positions.
The adjustment range is designed in such a way that ISO 7092 washers can be used within the adjustment slot in the housing.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

GN 817.3

Indexing plungers

for precision locating, plunger cylindrical

SPECIFICATION

Types

- Type **B**: without rest position
- Type **C**: with rest position

Steel

- blackened
- Pin hardened and grounded

Knob Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Indexing plungers GN 817.3 realize a reasonable priced precision locating when guide bushings DIN 179 (see page 1008) are used .
For this purpose a guide bushing DIN 179 (see page 1008) is used as guide, whereby the dimension l3 of the plunger determines the length of the bushing .
The precise location is, therefore, not dependent on the guide pin in the plunger, but on the accuracy of the guide bushing (bore tolerance F7) and the plunger (tolerance h7). Both components are hardened and ground. It goes without saying that the bushing length also influences the accuracy of the positioning.
Type C is used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.
- Range of indexing plungers (see page 738)

ACCESSORY

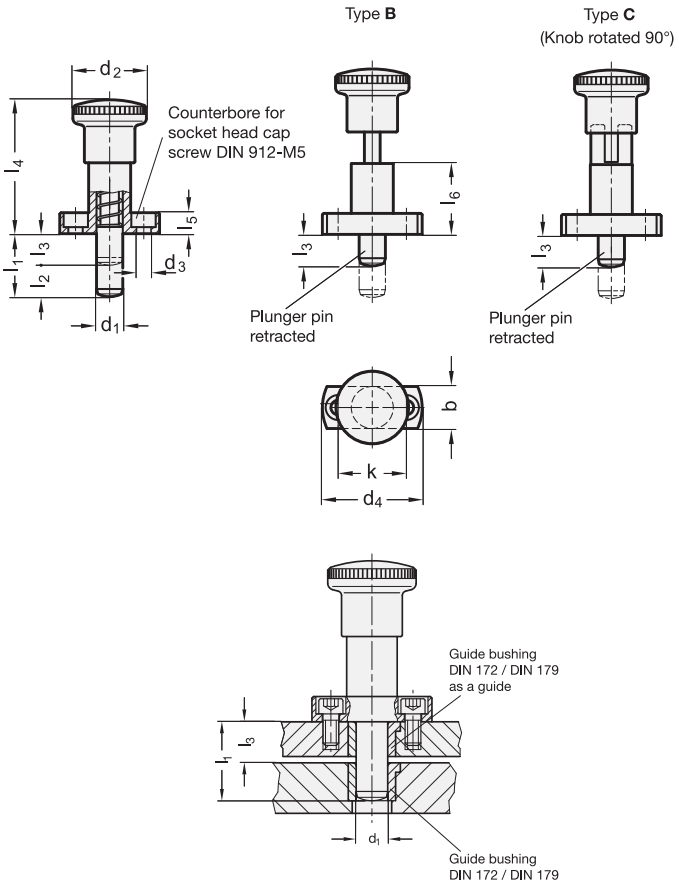
- Guide bushings DIN 179 (see page 1008)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Plastic characteristics (see page A2)

CONSTRUCTION AND ASSEMBLY INSTRUCTIONS

Two different plunger pin lengths l1 are available for each indexing plunger diameter d1.
The length l3 must ensure that the indexing pin fully disengages, bushing length and plate thickness plus any gap can then be selected within certain margins.
For mounting bushings with tolerance n6, a hole with tolerance H7 corresponding to the external diameter is usually provided.
A selection of suitable guide bushings DIN 172 (see page 1006) and DIN 179 (see page 1008) is given.



*Complete with type index of the Indexing plungers (B or C)

B without rest position
C with rest position

Weight type B

Indexing plungers

for precision locating, plunger conical

SPECIFICATION

Types

- Type **B**: without rest position
- Type **C**: with rest position

Steel

- blackened
- Pin hardened and grounded

Knob Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Indexing plungers GN 817.5 allow highly accurate positioning, with the guidance made by the positioning bushings DIN 172 / DIN 179 with cylindrical bore. The actual indexing bore is fitted with positioning bushings GN 172.1 / GN 179.1 with conical bores.
The conical shape of the indexing pin / the indexing bore makes the positioning virtually clearance-free and therefore highly precise.
Type C is used for such applications where the plunger has to stay in its retracted position. To achieve this, the knob is rotated by 90° degrees after being retracted. A notch keeps the plunger in this position.
- Range of indexing plungers (see page 738)

CONSTRUCTION AND ASSEMBLY INSTRUCTIONS

The length l_7 is determined by the penetration depth of the indexing pin into the cone of the bushing.
The length l_8 must ensure that the indexing pin fully disengages, bushing length and plate thickness olus any gap can then be selected within certain margins.
If engaged, the pin must have a minimum remaining stroke of 0.5 mm to make sure that the conical section of the pin is located without clearance in the cone of the guide bushing.
Two different plunger pin lengths l_1 are available for each indexing plunger diameter d_1 (see product table).
For a safe remaining stroke length: $l_9 = l_1 - 0.5$ mm
For mounting bushings with tolerance n6, a hole with tolerance H7 corresponding to the external diameter is usually provided.
A selection of suitable guide bushings DIN 172 (see page 1006) and DIN 179 (see page 1008) with cylindrical bore and guide bushings GN 172.1 (see page 1010) / GN 179.1 (see page 1010) with conical bore.

red, RAL 3000, matt

INFORMATION

Indexing plungers GN 414 with safety function are used when the inadvertent retraction of the plunger pin is to be prevented. The protruding plunger is first locked and may be unlocked for pulling only by exerting axial pressure on the red safety push-button
In every case, the safety lock engages in the front end position, i.e. automatically if the indexing pin protrudes, with the locking mechanism housed fully in the operating button and protected from malfunctions. The specified axial load bearing capacity refers to the locking force of the bolt against inadvertent operation which must not be exceeded.
- Range of indexing plungers (see page 738)

Locking plungers

Pin in normal position protruded

SPECIFICATION

Types

- Type **A**: Operation with knob, sleeve black, without lock nut
- Type **AK**: Operation with knob, sleeve black, with lock nut
- Type **AR**: Operation with knob, sleeve red, without lock nut
- Type **ARK**: Operation with knob, sleeve red, with lock nut
- Type **B**: Operation with key, sleeve black, without lock nut
- Type **BK**: Operation with key, sleeve black, with lock nut

Threaded body
Steel zinc plated, blue passivated

Pin
Stainless Steel AISI 303

Spring
Stainless Steel AISI 301

Knob
Plastic (Polyamide PA)

- black, matt
- not removable

Sleeve
Plastic (Polyamid PA)

- black, matt or red
- not removable

INFORMATION

If not operated, the plunger of the locking plungers GN 816 protrudes. To retract, move against the spring force and hold in the end position by turning by 90°.
The shape of the cam curve secures the plunger against accidental operation.
When operating the button (Type AR/ARK), to visible **red** covering sleeve indicates the locing status: Indexing pin does **not** protrude.
For the execution with operation with key (Type B / BK) a key is required to move the plunger. In this execution, a cover sleeve provides additional security and safety from unauthorized removal of the locking plunger. The cover sleeve also provides additional protection against malfunction caused by dirt.
- Range of indexing plungers (see page 738)

Indexing plungers

Steel / Stainless Steel, with click-type safety lock, unlocking with push-button

SPECIFICATION

Types

- Type **A**: without lock nut
- Type **AK**: with lock nut

Version in Steel

- blackened
- Pin hardened

Version in Stainless Steel AISI 303 NI

Pin chemically nickel plated

Knob
Plastic (Polyamide PA)

- black matt finish
- not removable
- black grey, RAL 7021, matt

Push-button
Technopolymer (Polyacetal POM)
red, RAL 3000, matt

INFORMATION

Indexing plungers GN 414.1 with click-type safety lock are used when the plunger pin is to be briefly prevented from protruding. When the pin is retracted to its end position, the button engages with a clearly audible click.
The safety lock can be unlocked only by exerting axial pressure on the red safety pushbutton, with the plunger pin then returning to its starting position by spring force.
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Locking plungers

with PUSH-PUSH locking mechanism

SPECIFICATION

Types

- Type **A**: without lock nut
- Type **AK**: with lock nut

Steel

- nitrided
- blackened

Knob
Plastic (Polyamide PA)
black, matt

INFORMATION

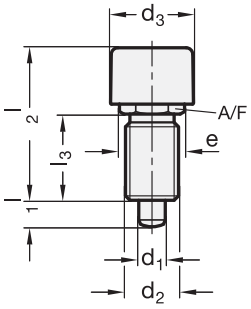
The indexing pin in the locking plungers GN 514 is moved via a so-called cardioid mechanism.
This mechanism means that the indexing pin is both extended and retracted alone by **pressing** the operating button (PUSH-PUSH locking mechanism).
Please note that the indexing pin **cannot absorb any axial forces** and that it retracts virtually by spring action; the indexing pin must therefore remain free and easy to move.

- Range of indexing plungers (see page 738)

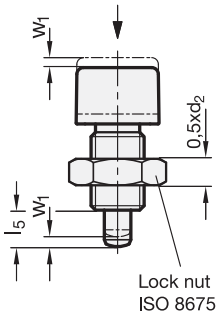
TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

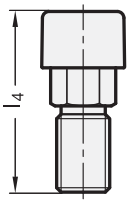
Indexing pin protrudes and is in locking position

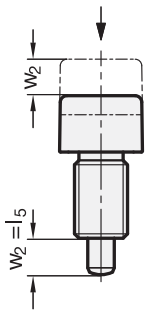


Button pushed by w_1: Indexing pin unlocked



Indexing pin retracted via pressure spring and held in position





Button pushed by w_2: Indexing pin moves back into locking position

INFORMATION

The pin of the spring bolts GN 313 does not protrude in the inoperative position.
It can be operated manually or in Type D and DK mechanically (pneumatic cylinder, cam plate, etc.) when it will protrude only as long as it is operated.
Using the internal thread at identification 2 on the pressure side, special pressure bolts or a rod arrangement can be operated, for instance.

Clamping knobs with indexing plungers

SPECIFICATION

Knurled knob GN 7336 (see page)
Plastic (Polyamide PA)
black, matt

Cover
Plastic (Polyamide PA)
light grey, matt

Fixing thread
Steel zinc plated, blue passivated

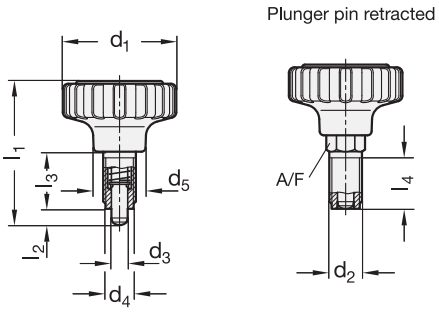
Plunger pin
Stainless Steel AISI 303

INFORMATION

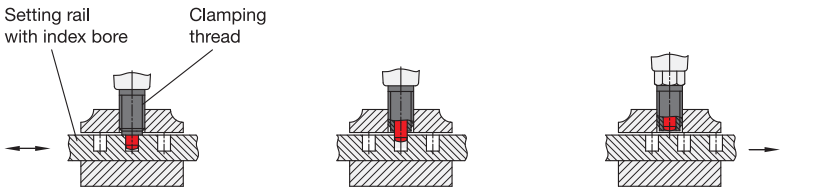
Clamping knobs with indexing plunger GN 7336.7 are used for positioning, securing and clamping adjusting elements at the same time.
The axial movement of the handle (pulling) pulls the indexing pin from the engaged position against the spring force, with the star know at the same time remaining connected with form-lock to the clamping screw via a hexagonal element, allowing both clamping and releasing.
- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)



Assembly example



Setting rail positioned through indexing plunger, clamped with in position clamping handle

Clamping action released, indexing plunger still engaged

Clamping action released, indexing plunger disengaged, setting rail can be moved

GN 7336.8

Clamping indexing plungers

with safety function

SPECIFICATION

Knurled knob
Plastic (Polyamide PA)
black, matt

Cover
Plastic (Polyamide PA)
light grey, matt

Fixing thread
Steel zinc plated, blue passivated

Plunger pin
Steel nitrided and blackened

INFORMATION

Clamping indexing GN 7336.8 plungers are an advanced development of the GN 7336.7 clamping knobs with indexing plunger.
Like the latter, they are used for positioning, securing and clamping adjusting elements at the same time. This configuration ensures that the indexing pin cannot be pulled from the indexing bore by turning the knurled knob, but only be deliberately pulling the handle (safety function).

- Range of indexing plungers (see page 738)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

PMT.110

Indexing plungers

SUPER-technopolymer body

THREADED BODY
Glass-fibre reinforced polyamide based (PA) SUPER-technopolymer.

PLUNGER
Black-oxide hardened steel or AISI 303 stainless steel.
Suggested tolerance for matching hole = H7.

KNOB
Glass-fibre reinforced polyamide based (PA) technopolymer, grey-black colour, matte finish.

SPRING
AISI 302 stainless steel.

LOCKING NUT NTT
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.
Available also as accessory sold separately (see table NTT).

STANDARD EXECUTIONS
- **PMT.110-A:** black-oxide steel plunger, without locking nut.
- **PMT.110-AK:** black-oxide steel plunger, with locking nut (supplied not assembled).
- **PMT.110-SST-A:** AISI 303 stainless steel plunger, without locking nut, not magnetic.
- **PMT.110-SST-AK:** AISI 303 stainless steel plunger, with locking nut (supplied not assembled), not magnetic.

FEATURES AND APPLICATIONS
- Lightness and high mechanical resistance of the product.
- Anticorrosive material: suitable even in the presence of liquid or humidity (PMT.110-SST).
- The SUPER-technopolymer threaded body of the plunger offers a low friction factor to the plunger stroke; no lubricating maintenance is required.
- Resistant to several cleaning cycles with solvents and other chemical agents, for this reason they are suitable for applications as in the pharmaceutical or food industry.

ASSEMBLY INSTRUCTIONS
Make sure that no machining residues are left on the threaded hole for the tightening of PMT.110 indexing plunger (see fig. 1). Do not make any chamfering in the hole (see fig. 2).
SUPER-technopolymer product based on ELESA technology, dimensions of the threaded body and plunger according to GN 612 standards as agreed with Otto Ganter GmbH Co. KG.
ELK knob type: ELESA original design.

Stainless Steel-
Distance bushings

**for indexing plungers /
cam action indexing plungers assembly**

SPECIFICATION

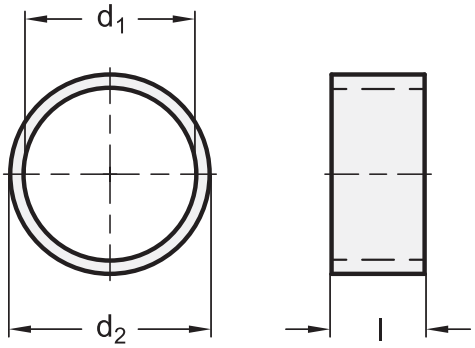
Stainless Steel AISI 303

INFORMATION

Distance bushings GN 609.5 compensate for the body thread length on the indexing plungers to allow mounting through walls of varying thickness.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)



Examples of application

GN 612.1

Mounting blocks

Steel / Stainless Steel, for indexing plungers / cam action indexing plungers

SPECIFICATION

Types

- Type **A**: fixing holes parallel to plunger
- Type **B**: fixing holes vertical to plunger

Version in Steel

- blackened
- Grub screw GN 913.3 with brass pad (see page 921)

Version in Stainless Steel AISI 303 NI

Grub screw GN 913.5 with brass pad (see page 922)

INFORMATION

Mounting blocks GN 612.1 broaden the mounting possibilities and are and added feature for the cam action indexing plungers GN 612 (see page 820) and cam action indexing plungers GN 712 (see page 823) / GN 712.1 (see page 824).
To position the indexing pin of an indexing plunger or cam action indexing plunger, they can also hold GN 412.2 (see page 813) positioning bushings.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

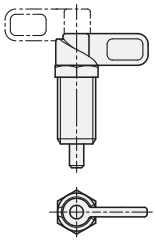
Cam action indexing plungers / Spring latches - Types

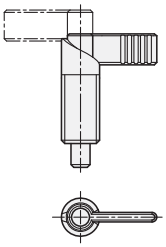
Unlocking by turning the plunger over curves

GN 612.8
see page 825
Ø 4 / 5 / 6 / 8 / 10 / 12



Features:
- Guide zinc die casting with nano®-coating
- Plunger pin steel, zinc plated
- Latch plastic
- Reasonably priced versions

GN 612
GN 612 ... NI
see page 820
Ø 4 / 5 / 6 / 8 / 10 / 12



Features:
- Guide steel, blackened or Stainless Steel
- Plunger pin steel, nitrided resp. Stainless Steel
- Latch steel, blackened resp. Stainless Steel
- Latch with or without plastic cover
- High precision plunger pin guide

PMT.200
Indexing plunger
with lever

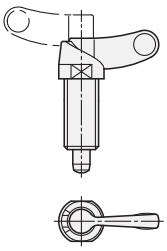
Ø 4 / 5 / 6 / 8 / 10 / 12

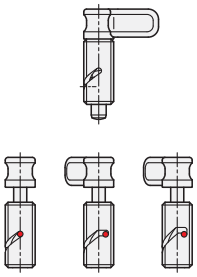
INOX STAINLESS STEEL · SUPER TECHNO POLYMER



Features:
- SUPER-technopolymer threaded body and lever. Lightness and high mechanical strength
- Steel (hardened) or Stainless Steel plunger pin
- Anticorrosive material: suitable even in the presence of liquid or humidity
- Low friction factor to the plunger stroke; no lubricating maintenance is required
- Resistant to several cleaning cycles with solvents and other chemical agents

---

GN 712
see page 823
Ø 6 / 8 / 10
Plunger pin in
standard position
protruded



Features:
- Plunger in end positions locked, not locked or arrested and additionally locked (safety version)
- Guide steel, zinc plated
- Plunger pin Stainless Steel
- Latch plastic

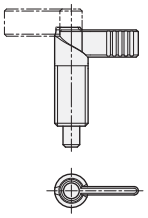
without locking function

INOX STAINLESS STEEL

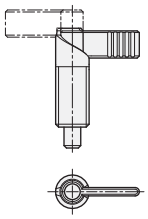


Features:
- Guide steel, blackened or Stainless Steel
- Plunger pin steel, hardened resp. Stainless Steel
- Latch steel, blackened resp. Stainless Steel
- Right- or left- hand lock
- Latch with or without plastic cover
- High precision plunger pin guide

Cam action indexing plungers / Spring latches - Types

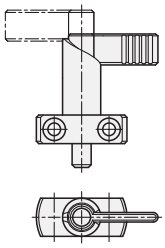
Unlocking by turning the plunger over curves

GN 721.1
GN 721.6
see page 828
Ø 4 / 5 / 6 / 8 / 10 / 12
with locking function



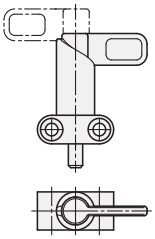
Features:
- Guide steel, blackened or Stainless Steel
- Plunger pin steel, hardened resp. Stainless steel
- Latch steel, blackened resp. Stainless Steel
- Right- or left- hand lock
- Latch with or without plastic cover
- High precision plunger pin guide

GN 612.2
see page 830
Ø 6 / 8 / 10 / 12



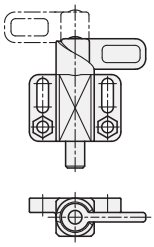
Features:
- Guide steel, blackened
- Plunger pin steel, nitrided
- Latch steel, blackened
- Latch with or without plastic cover

GN 612.9
see page 831
Ø 6 / 8 / 10 / 12



Features:
- Guide, Zinc die casting, black plastic coated
- Plunger pin steel, zinc plated
- Latch plastic
- Reasonably priced versions

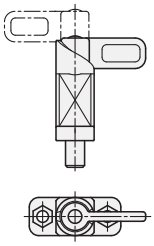
GN 722.3
see page 832
Ø 8 / 10 / 12 / 14



Features:
- Guide steel (fine casting), zinc plated or black plastic coated
- Plunger pin steel, zinc plated
- Latch steel, zinc plated
- Left or or right indexing cam
- Designed for use in „steel construction“ or in „locksmith shops“ i.e. for less precise positioning

---

GN 722.2
see page 834
Ø 8 / 10 / 12 / 14



Features:
- Guide steel (fine casting), zinc plated or black plastic coated
- Plunger pin steel, zinc plated
- Latch position right-angled or paralell to fixing holes
- Designed for use in „steel construction“ or in „locksmith shops“ i.e. for less precise positioning

Cam action indexing plungers / Spring latches - Types

Unlocking by turning the plunger over curves

GN 612.10
see page 836

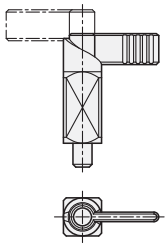
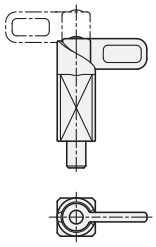
INOX STAINLESS STEEL



Features:
- Cam action indexing plunger for welding
- Guide steel, blackened or Stainless Steel
- Plunger pin steel, nitrided or Stainless Steel
- Latch with or without plastic cover

GN 722.1 ... ST
GN 722.1 ... A4
see page 838
Ø 8 / 10 / 12 / 14

INOX STAINLESS STEEL



Features:
- Cam action indexing plunger for welding
- Guide steel precison casting, blackened or Stainless Steel-precision casting
- Plunger pin steel, zinc plated or Stainless Steel
- Latch steel precison casting, blackened or Stainless Steel-precision casting
- Designed for use in „steel construction“ or in „locksmith shops“ i.e. for less precise positioning

Cam action indexing plungers

Steel / Stainless Steel

SPECIFICATION

Types

- Type **A**: without plastic cover, without lock nut
- Type **B**: with plastic cover, without lock nut
- Type **AK**: without plastic cover, with lock nut
- Type **BK**: with plastic cover, with lock nut

Version in Steel

- blackened
- Pin nitrided

Version in Stainless Steel AISI 303 NI

Spring
Stainless Steel AISI 301

Plastic cover (Polyamide PA)
black, matt

INFORMATION

Cam action indexing plungers GN 612 are used in cases where the locking pin must not protude all the time. By rotating the lock through 180° the locking pin withdraws itself. A groove is provided in either position to prevent the lock from rotating.

- Range of cam action indexing plungers (see page 816)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

PMT.200

Indexing plungers

Rest position, SUPER-technopolymer body

THREADED BODY
Glass-fibre reinforced polyamide based (PA) SUPER-technopolymer.

PLUNGER
Black-oxide hardened steel or AISI 303 stainless steel.
Suggested tolerance H7 for matching hole.

LEVER
Self-lubricating glass-fibre reinforced polyamide based (PA) technopolymer, black colour, matte finish.

SPRING
AISI 302 stainless steel.

LOCKING NUT (NTT)
Glass-fibre reinforced polyamide based (PA) SUPER-tecnopolymer.
Available also as accessory sold separately (see table NTT).

STANDARD EXECUTIONS
- **PMT.200-A:** black-oxide steel plunger, without locking nut.
- **PMT.200-AK:** black-oxide steel plunger, with locking nut (supplied not assembled).
- **PMT.200-SST-A:** AISI 303 stainless steel plunger, without locking nut, not magnetic.
- **PMT.200-SST-AK:** AISI 303 stainless steel plunger, with locking nut (supplied not assembled), not magnetic.

FEATURES AND APPLICATIONS
- PMT.200 lever indexing plungers are used when the plunger must be retracted quickly.
- By rotating the lifting lever by 180°, the plunger stops in the retracted position in which the lever is kept by a notch.
- High lightness and high mechanical resistance of the product.
- Anticorrosive material: suitable even in the presence of liquid or humidity (PMT.200-SST).
- The SUPER-technopolymer threaded body of the plunger offers a low friction factor to the plunger stroke; no lubricating maintenance is required.

ASSEMBLY INSTRUCTIONS
Make sure that no machining residues are left on the threaded hole for the assembly of PMT.200 indexing plunger (see fig. 1). Do not make any chamfering in the hole (see fig. 2).
SUPER-technopolymer product based on ELESA technology, dimensions of the threaded body and plunger according to GN 612 standards as agreed with Otto Ganter GmbH Co. KG.

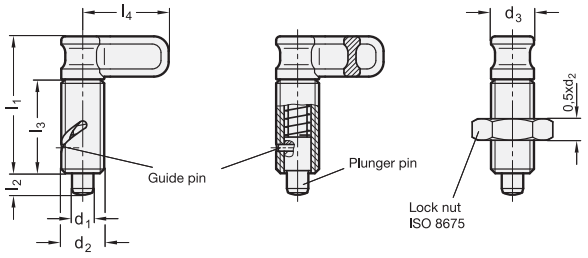
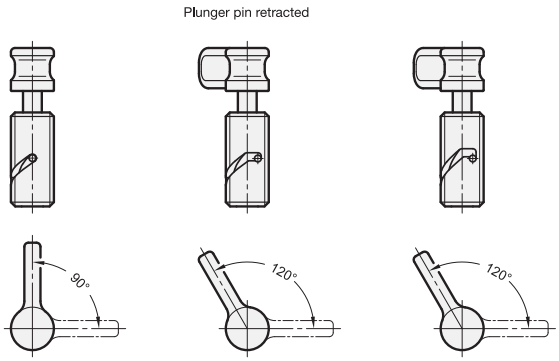
- black, matt
- not removable





INFORMATION

Cam action indexing plungers GN 712 are used in such applications where the plunger must not protrude continually. When turning the cam by 90° resp. 120° degrees in anti-clockwise direction, the plunger is moved through a curved opening in the body. After that, the plunger is retracted.
Depending on the type, the plunger is moved back by a spring in its original position (Type A), is held in retracted position (Type R), resp. is secured against accidental operation (Type S).
In order to move the plunger, safety version Type S requires an additional lifting of the latch.

- Range of cam action indexing plungers (see page 816)

Cam action indexing plungers

Plunger Pin in standard position retracted

SPECIFICATION

Types

- Type **A**: without rest position, without lock nut
- Type **AK**: without rest position, with lock nut
- Type **R**: with rest position, without lock nut
- Type **RK**: with rest position, with lock nut
- Type **S**: with safety rest position, without lock nut
- Type **SK**: with safety rest position, with lock nut

Steel
zinc plated, blue passivated

Pin
Stainless Steel AISI 303

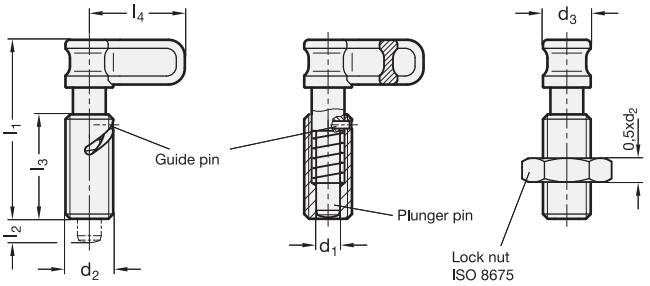
Latch
Plastic Technopolymer (Polyamide PA)

- black, matt
- not removable

INFORMATION

Cam action indexing plungers GN 712.1 are used in such applications where the plunger must not protrude continually. When turning the cam by 90° resp. 120° degrees in anti-clockwise direction, the plunger is moved through a curved opening in the body. After that, the plunger is protruded.
Depending on the type, the plunger is moved back by a spring in its original position (Type A), is held in protruded position (Type R), resp. is secured against accidental operation (Type S). In order to move the plunger, safety version Type S requires an additional pushing of the latch.

- Range of cam action indexing plungers (see page 816)



TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)
- Load rating information (see page A42)

GN 612.8

Cam action indexing plungers

Threaded body zinc die casting,
ZNDG Pass nano®-coating

SPECIFICATION

Types

- Type **A**: without lock nut
- Type **AK**: with lock nut

Threaded body (Guide)
Zinc die casting

- corrosion-resistant, ZNDG Pass nano®-coating
- anthracite

Plunger pin
Steel
zinc plated, blue passivated

Lever
Plastic (Polyamide PA)

- black, matt
- not removable

INFORMATION

Cam action indexing plungers GN 612.8 are used in cases where the locking pin must not protrude all the time. By rotating the lock through 180° the locking pin withdraws itself. The groove allows safe positioning.
These cam action indexing plungers made of die-cast zinc are very reasonably priced design versions.
- Range of cam action indexing plungers (see page 816)

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Load rating information (see page A42)

INFORMATION

Spring latches GN 722.3 are used when the indexing pin is temporarily not allowed to protrude. The indexing pin retracts by turning the latch by 180°. A lock notch will hold the latch in both positions.
Spring latches GN 722.3 are designed for use in **steel construction** or in **locksmith shops** where less precise positioning / locking is normally required. The dimensional tolerances are therefore chosen to ensure that functional safety is guaranteed under dirt exposure and that cost-effetive production methods are used.

- Pin nitrided

Version Stainless Steel NI

- Guide, weldable AISI 304
- Pin AISI 303

Spring
Stainless Steel AISI 301

Plastic cover (Polyamide PA)
black, matt

INFORMATION

Cam action indexing plungers GN 612.3 are used in cases where the locking pin must not protrude all the time. By rotating the lock through 180° the locking pin withdraws itself. A groove keeps the plunger in this position.
The square body can therefore be welded in any required position. In order to prevent a change in the spring load by the transferred heat we recommend spot welding the plunger body.

- Range of cam action indexing plungers (see page 816)

Stainless Steel precision casting **A4**
weldable, AISI 316

Pin
Stainless Steel AISI 316

Spring
Stainless Steel AISI 316Ti

INFORMATION

Spring latches GN 722.1 are used when the indexing pin is temporarily not allowed to protrude. The indexing pin retracts by turning the latch by 180°. A lock notch will hold the latch in both positions.
The square bar allows the latch to be welded in any desired position. To prevent excessive heating up and the resulting change in the spring properties, fixing with welding spots is recommended.
Spring latches GN 722.1 are designed for use in **steel construction** or in **locksmith** shops where less precise positioning / locking is normally required. The dimensional tolerances are therefore chosen to ensure that functional safety is guaranteed under dirt exposure and that cost-effetive production methods are used.

Spring plungers

Steel / Stainless Steel, with ball / with internal hexagon

SPECIFICATION

Types

- Type **K**: Steel, standard spring load
- Type **KS**: Steel, high spring load
- Type **KN**: Stainless Steel, standard spring load
- Type **KSN**: Stainless Steel, high spring load

Type K / KS

- Steel, blackened
- Ball, hardened

Type KN / KSN

- Stainless Steel AISI 303 / AISI 420C
- Ball hardened

Marking of Type KS / KSN:
Housing with 2 longitudinal markings
- Thread lockings (optional)
- Polyamide patch **PFB**

Type K/KS M 3 ... M16
Type K*/KS* M20 ... M24
Type KN/KSN M3 ... M6
Type KN*/KSN* M20 ... M24
- Micro encapsulation* **MVK**

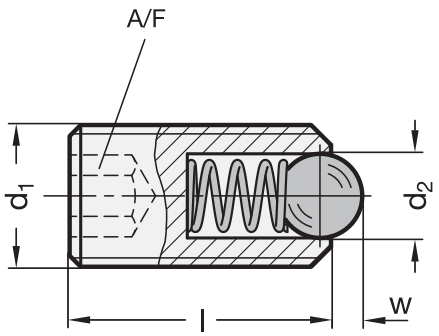
* not availble from stock, requires a minimum order quantity

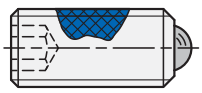
INFORMATION

The **PFB** patch is a **jamming** thread locking (Polyamide patch). The coating for Type K or KN (standard spring load) is indicated blue, for Type KS or KSN (high spring load) green. For this Type of thread locking a relatively high torque is required. Therefore this version with internal hexagon is more preferable than the version with slot GN 615 (see page 839).
MVK (Micro encapsulation) is a **gluing** thread locking (indicated red).

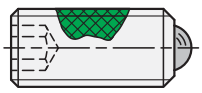
TECHNICAL INFORMATION

- More information to thread locking MVK (see page A24)
- More information to thread locking PFB (see page A24)

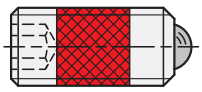




Thread locking **PFB**
Polyamide patch
for type **K** and **KN**



Thread locking **PFB**
Polyamide patch
for type **KS** and **KSN**



Thread locking **MVK**
Micro encapsulation precote
(for all types)

GN 615.4

Spring plungers

Steel / Stainless Steel, with bolt / with internal hexagon

SPECIFICATION

Types

- Type **B**: Steel, standard spring load
- Type **BN**: Stainless Steel, standard spring load
- Type **BS**: Steel, high spring load
- Type **BSN**: Stainless Steel, high spring load

Type B / BS:

- Steel, blackened
- Bolt hardened

Type BN / BSN

- Housing Stainless Steel AISI 303
- Bolt Stainless Steel AISI 420C, hardened

Marking of Type BS / BSN:
Housing with 2 longitudinal markings

Spring
Stainless Steel AISI 631

INFORMATION

Spring plungers GN 615.4 are used as detents as well as for push-on and push-off applications and ejectors.

ON REQUEST

- with thread locking PFB / MVK

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

GN 815

Spring plungers

Steel / Stainless Steel, with ball / with collar

SPECIFICATION

Version in Steel ST

- Housing blackened
- Ball hardened

Version in Stainless Steel NI

- Housing AISI 303
- Ball AISI 420C hardened

INFORMATION

Spring plungers GN 815 are used as detents as well as for push-on and push-off applications and ejecotors.
The collar gives a defined installation position.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

nickel plated

Spring plungers GN 614-KU (see page 847)

Housing
Plastic (Polyacetal POM)
temperature resistant up to 50 °C

Ball Stainless Steel AISI 420C, hardened

INFORMATION

Holder for spring plungers / Side thrust pins GN 614.1 are used for arresting and as press-on or press-off elements. The easy attachment using one or two countersunk screws also allows its use where a location borehole with the tolerance field H7 for the spring plunger would not be possible from its size and manufacturability.
Side thrust pins GN 614.1 consist of a holder for spring plungers and a Stainless Steel-Spring plunger GN 614 of type KU (see page 847).
For types R, L and B, only a „empty" holder for spring plungers (without spring plungers) are supplied which can then be used together with all other design variants of GN 614-6 and GN 614-8 of the types KD, MS and NI.

Spring
Stainless Steel AISI 631

INFORMATION

Spring plungers GN 614.5 are used as detents as well as for push-on and push-off applications and ejectors.
The geometric shape of the plastic housing generates a self-clamping function which compensates drill hole tolerances of as much as 0.2 mm. It also allows the hand-tightened assembly and makes overhead installation easier.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Polyacetal POM, white
temperature resistant up to +50 °C

Spring
Stainless Steel AISI 631

INFORMATION

Spring plungers GN 614.4 are used for locking, as pressing and back-off pins, but also as impact dampers.
A tolerance of H7 for the location hole of d_1 is recommended.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Spring plungers

Steel / Stainless Steel, with bolt / with internal hexagon

SPECIFICATION

Version in Steel

Types

- Type **S**: Bolt Steel, standard spring load
- Type **SS**: Bolt Steel, high spring load
- Type **K**: Bolt Plastic, standard spring load

Housing

Steel, blackened

Type S / SS
Bolt Steel, hardened

Type K
Bolt Plastic (Polyacetal POM)
temperature resistant up to 50 °C

Spring
Stainless Steel AISI 631

Marking of Type SS
Housing with 2 longitudinal markings

Version in Stainless Steel

Types

- Type **SN**: Bolt Stainless Steel, standard spring load
- Type **KN**: Bolt Plastic, standard spring load

Housing
Stainless Steel AISI 303

Type SN
Bolt Stainless Steel AISI 303

Type KN
Bolt Plastic (Polyacetal POM)
temperature resistant up to 50 °C

Spring
Stainless Steel AISI 631

INFORMATION

Spring plungers GN 616 are used as detents as well as for push-on and push-off applications and ejecetors.
The slot on the plunger side is provieded for blind hole applications.
A special screw driver GN 616.5 is available.

ACCESSORY

- Screw drivers GN 616.5 (Code no. see table)

ON REQUEST

- with thread locking PFB / MVK

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

GN 615.7

Spring plungers

with limit switch

SPECIFICATION

Types

- Type **S**: normally open
- Type **O**: normally closed

Screw
Steel, nickel plated

Ball
Steel, hardened

Hexagonal nuts
Steel, nickel plated

Limit switch

- Voltage: 5 ... 24 V DC
- Switching load recom.: 5-10 mA
- Switching load max.: 20 mA DC
- Life expectancy: 3 million operations
- Temperature range: -10 °C ... +80 °C

Supply cable PVC:

- Ø 3; 2 phase, ≈ 2 meters long
- max. tensile load 20 N
- grey, for Type S (normally open)
- black, for Type O (normally closed)

Protection class IP 40

INFORMATION

Spring plungers GN 615.7 are used for end stops as wells as contacts Simultaneously an electrical control signal can be released from the built-in limit switch.

- IP Protection classes (see page A23)

Spring elements

SPECIFICATION

Types

- Type **I**: Female thread
- Type **K**: Pointed nose
- Type **H**: Semi-spherical, Steel
- Type **P**: Prism (120°)

Identification No.

- Version **1**: standard spring load
- Version **2**: high spring load

Steel

Threaded sleeve
zinc plated, blue passivated

Spring bolt
case hardened, blackened

Identification

standard spring load:
Crescent shaped ring
phosphated (anthracite)

high spring load:
Crescent shaped ring
zinc plated, blue passivated

INFORMATION

Spring elements GN 513 are universal pressure elements used as detents, positioners or for clamping with spring pressure. The spring loaded nose can be used for a push-on or push-off operation. In addition the spring loaded nose cannot rotate.
At the pulling end the female thread will accept a pulling rod or an operating knob.
Type I with a female thread at the pushing end can be fitted with a special plunger nose.
The spring element can be screwed into a thread at the hexagon on the pulling end or the spanner flats at the pushing end of the plunger.

thrust pin Steel, hardened
zinc plated, blue passivated

Type KA / KB
thrust pin Plastic Polyacetal (POM)

Thrust spring coding
Force, low thrust: grey
medium thrust: black
high thrust: silver

Seal rubber
NBR (Perbunan)

INFORMATION

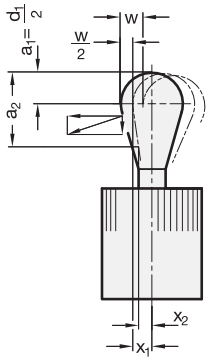
Spring loaded side thrust pins GN 715 are versatile and practical elements for holding, positioning and clamping of workpieces.
They eliminate costly alternatives, are space saving and easy to install. The knurled body requires only a hole tolerance of H8.
For easy mounting a suitable tool GN 715.1-... is available (see table).

TECHNICAL INFORMATION

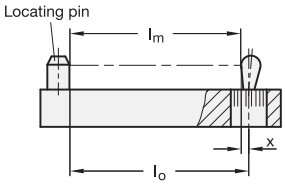
- ISO-Fundamental Tolerances (see page A21)
- Plastic characteristics (see page A2)
- Elastomer characteristics (see page A32)

TECHNICAL AND ASSEMBLY INSTRUCTIONS

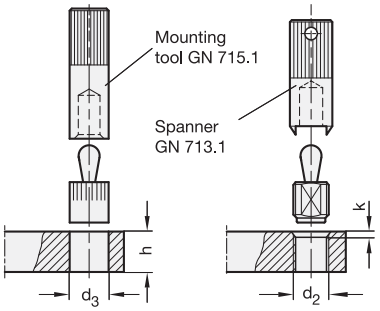
w = Movement of pin
F = Side thrust in N
initial thrust = F_0
end thrust = 1.1 x F_0
a_2-a_1 = Clamping range for workpiece
x = distance centre line – thrust point at w_2
x_1 for highest thrust point (a_1)
x_2 for lowest thrust point (a_2)
l_0 = Distance end stop – bore of thrust bush
$l_0 = l_m + x$
l_m = Average length of workpiece $l_{max.} + l_{min.}/2$
For contact points (workpiece height) between a_1 and a_2 a value for x has to be used lying between x_1 and x_2 (interpolation).



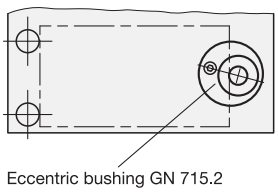
By observing the above values the full movement of the side thrust pin will be available to cover the tolerance of the workpiece.



For inserting the side thrust pins the use of a mounting tool GN 715.1 or spanner GN 713.1 is recommended.



Eccentric bushes GN 715.2 (see page 867) are tooling accessory for GN 714 (see page 862) / GN 715. They enable a precise optimum setting of side thrust pins. This allows an adjustment to l_0 to accommodate for instance a larger tolerance range on a workpiece.



GN 715

Side thrust pins

without pressure pin, press on type

SPECIFICATION

Housing Aluminium
blank

Thrust plate with female thread
hardened, blackened

Thrust spring coding
Force, low thrust: grey
medium thrust: lack
high thrust: silver

Seal rubber
NBR (Perbunan)

INFORMATION

Side thrust pins GN 714 are the result of further development of GN 715 (see page 860). It is left to the customer to design his own pressure pin which can be screwed into the thrust plate.
This design extends the field of applications for side thrust pins offering identical advantages i.e. they eliminate costly alternatives, are space saving and are simple to install. The knurled body requires bore to H8 tolerance only.
For easy mounting a suitable tool GN 715.1 is available (see table).

ACCESSORY

- Mounting tools GN 715.1 (Code no. see table)

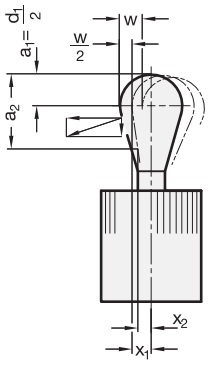
TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Elastomer characteristics (see page A32)

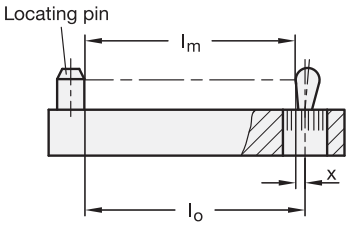
TECHNICAL AND ASSEMBLY INSTRUCTIONS

w = Movement of pin
F = Side thrust in N
initial thrust = F_0
end thrust = 1.1 x F_0
a_2-a_1 = Clamping range for workpiece
x = Distance centre line – thrust point at w_2
x_1 for highest thrust point (a_1)
x_2 for lowest thrust point (a_2)
l_0 = Distance end stop – bore of thrust bushing
$l_0 = l_m + x$
l_m = Average length of workpiece $l_{max.} + l_{min.}/2$
For contact points (workpiece height) between a_1 and a_2 a value for x has to be used lying between x_1 and x_2 (interpolation).

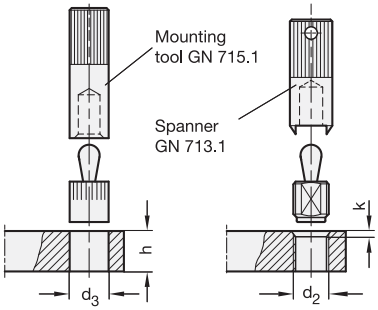
By observing the above values the full movement of the side thrust pin will be available to cover the tolerance of the workpiece.



By observing the above values the full movement of the side thrust pin will be available to cover the tolerance of the workpiece.



For inserting the side thrust pins the use of a mounting tool GN 715.1 or spanner GN 713.1 is recommended.



Eccentric bushes GN 715.2 (see page 867) are tooling accessory for GN 714 (see page 862) / GN 715 (see page 860). They enable a precise optimum setting of side thrust pins. This allows an adjustment to l_0 to accommodate for instance a larger tolerance range on a workpiece.

INFORMATION

Spring loaded side thrust pins GN 713 are versatile and practical elements for holding, positioning and clamping workpieces.
They eliminate costly alternatives, are space saving and simple to install. The protruding height of the thrust pin can be adjusted with the threaded body.
For easy mounting a suitable tool GN 713.1-is available (see table).

ACCESSORY

- Mounting tools GN 713.1 (Code no. see table)

TECHNICAL INFORMATION

- Elastomer characteristics (see page A32)

TECHNICAL AND ASSEMBLY INSTRUCTIONS

w = Movement of pin

INFORMATION

Side thrust pins GN 716 are designed for holding, positioning and locating a workpiece.
They have to pressed into the housing by a least the dimensions l_3, so as to ensure a positive hold.

GN 715.2

Eccentric bushes

for side thrust pins GN 714 / GN 715

SPECIFICATION

Steel
blackened

INFORMATION

Eccentric bushes GN 715.2 allows side thrust pins GN 715 (see page 860) / GN 714 (see page 862) to be adjusted. These bushes allow the side thrust pin to be precisely adjused to suit the requirements for clamping of a component.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

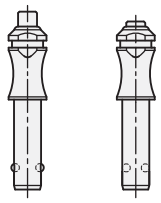
Locking pins with axial lock - Types

GN 113.3
GN 113.4
see page 870
Ø 5 / 6 / 8 / 10 / 12 / 16 / 20
with tightened gripping tray

INOX STAINLESS STEEL

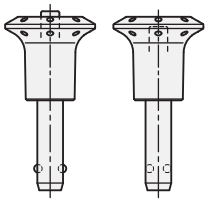


Function:
- The locking element consists of 2 balls, which are "retracted" by press of a button and brought back into the (form-locking) lock function by a spring.

Features:
- GN 113.3: Stainless Steel AISI 303
- GN 113.4: Stainless Steel AISI 630, precipitation-hardened

GN 113.5
GN 113.6
see page 874
Ø 5 / 6 / 8 / 10 / 12 / 16
with plastic knob

INOX STAINLESS STEEL

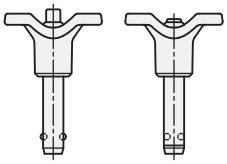


Function:
- The locking element consists of 2 balls, which are "retracted" by press of a button and brought back into the (form-locking) lock function by a spring.

Features:
- GN 113.5: Stainless Steel AISI 303
- GN 113.6: Stainless Steel AISI 630, precipitation-hardened

GN 113.7
GN 113.8
see page 878
Ø 5 / 6 / 8 / 10 / 12 / 16
with plastic-T-handle

INOX STAINLESS STEEL

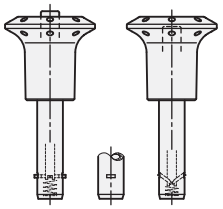


Function:
- The locking element consists of 2 balls, which are "retracted" by press of a button and brought back into the (form-locking) lock function by a spring.

Features:
- GN 113.7: Stainless Steel AISI 303
- GN 113.8: Stainless Steel AISI 630, precipitation-hardened

GN 114.2
GN 114.3
GN 114.6
see page 882
Ø 6 / 8 / 10 / 12 / 16 / 20
with knob

INOX STAINLESS STEEL

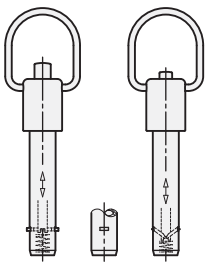


Function:
- The locking element consists of rectangular locking pawls, which are "retracted" by press of a button a brought back into the lock function by a spring (DBP).

Features:
- GN 114.2
  - Pin steel, zinc plated
  - Knob, push-button, slide plastic
- GN 114.3
  - Pin Stainless Steel AISI 303
  - Knob, push-button, slide plastic
- GN 114.6
  - Pin Stainless Steel AISI 303
  - Knob, push-button, slide Stainless Steel

GN 214.2
GN 214.3
GN 214.6
see page 888
Ø 6 / 8 / 10 / 12 / 16 / 20
with lifting ring
(Stainless Steel AISI 301)

INOX STAINLESS STEEL

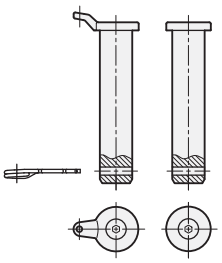


Function:
- The locking element consists of rectangular locking pawls, which are "retracted" by press of a button a brought back into the lock function by a spring (DBP).

Features:
- GN 214.2
  - Pin steel, zinc plated
  - Push-button, slide plastic
- GN 214.3
  - Pin Stainless Steel AISI 303
  - Push-button, slide plastic
- GN 214.6
  - Pin Stainless Steel AISI 303
  - Push-button, slide Stainless Steel AISI 303

Locking pins with axial lock - Types

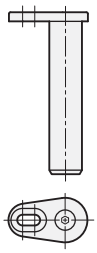
GN 2342
see page 898
Type B / E
Ø 8 / 10 / 12 / 16 / 20



Function:
- With type B and E Stainless Steel-Assembly pins, axial positioning is performed with a collar oer eyelet washer.
- Axial securing is by means of a transverse hole (id. no. 2) in which a spring cotter pin is inserted.
- Assembly pins with eyelet washers (type E), including the matching spring cotter pin, can additionally be secured against loss with a retaining cable.

Features:
- Pin Stainless Steel AISI 304

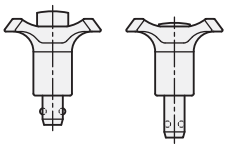
GN 2342
see page 898
Type L
Ø 6 / 8 / 10 / 12



Function:
- With type L Stainless Steel-Assembly pins, axial positioning is by means of a fastening tab.
- Fastened with a countersunk screw, the fastening tab holds the assembly pin in the hole so that is it secured against rotation and does not have any play.

Features:
- Pin Stainless Steel AISI 304

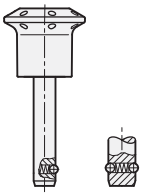
GN 113.1
see page 894
Ø 6 / 8 / 10 / 12



Function:
- The ball lock pins are used for quick fixing of thin-walled parts e.g. sheets.
- By depressing the spring-loaded push button the pin advances and at the same time frees the two balls.

Features:
- Pin Stainless Steel AISI 303
- Handle plastic

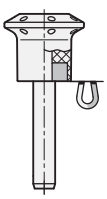
GN 124.2
see page 895
Ø 6 / 8 / 10 / 12



Function:
- The locking element consists of one or two guide balls that are held in the locking position using a thrust spring. The bolts can be quickly and easily inserted and removed from the locating hole.

Features:
- Pin Stainless Steel AISI 303
- Knob plastic

GN 124.1
see page 896
Ø 6 / 8 / 10 / 12



Function:
- Combined with magnetic componets. the magnet fitted at the bottom of the knob holds the locking pins in the axial direction.
- Good surfaces and perpendicular drilling heads help in achieving extremely good axial retaining forces.

Features:
- Pin Stainless Steel AISI 303
- Knob plastic
- Retaining magnet neodymium, iron, boron

Stainless Steel-Ball lock pins

AISI 303, with hollow for grip

SPECIFICATION

Stainless Steel AISI 303

Balls
Stainless Steel AISI 420C

Spring
Stainless Steel AISI 631

temperature resistant up to 250 °C

INFORMATION

Stainless Steel-Ball lock pins GN 113.3 are used for quick fixing, connecting and locking of various parts and workpieces. A typical application is locating pins which have often to be removed and installed again.
By pressing the spring loaded push button both balls are unlocked and by releasing it the balls are locked again.
Ball lock pins GN 113.3 are renowned for their compactness. The eye ring is enclosed unmounted.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule out any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of lock pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

Stainless Steel-Ball lock pins

AISI 630, with plastic-knob

SPECIFICATION

Pin Stainless Steel AISI 630
precipitation-hardened

Knob
Plastic (Polyamide PA)

- black-grey / red
- temperature resistant up to 80 °C

Balls
Stainless Steel AISI 420C

Spring
German Material No. 1.4565

INFORMATION

Stainless Steel-Ball lock pins GN 113.6 are used for quick fixing, connecting and locking of various parts and workpieces. A typical application is locating pins which have often to be removed and installed again.
By pressing the spring loaded push button both balls are unlocked and by releasing it, the balls are locked again.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule out any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of lock pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)

INFORMATION

Stainless Steel-Ball lock pins GN 113.8 are used for quick fixing, connecting and locking of various parts and workpieces. A typical application is locating pins which have often to be removed and installed again.
By pressing the spring loaded push button both balls are unlocked and by releasing it, the balls are locked again.
Ball lock pins GN 113.8 have an extreme load capacity, the pin is made of heavy duty, hardened and highly abrasion-resistant stainless steel. The load values given in the above table at shar stress are theoretically obtained and indicative only. They are non-binding recommended values and rule out of any liability. They consstitute no general warranty of quality and condition. The user must determine from case to case whether a product ist suitable for the intended use.

Locking pins

with axial lock (Pawl)

SPECIFICATION

Pin
Steel
zinc plated, blue passivated

Pawl
Stainless Steel AISI 304 (sheet metal)

Knob
Plastic (Polyamide PA)

- black-grey
- temperature resistant up to 80 °C

Push button / Slide
Plastic

- Push button: red
- temperature resistant up to 80 °C

Spring
Stainless Steel AISI 301

INFORMATION

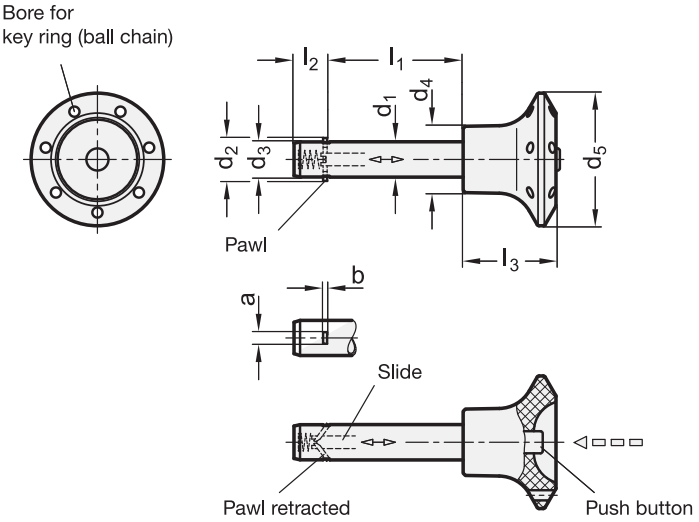
Locking pins with axial lock GN 114.2 are used for quick fixing, connecting and locking of various jig and fixture systems. A typical application is location pins which have to be often removed and replaced again.
The rectangular pawls made of Stainless Steel sheet metal keep the locking pin in an axial position in the bore. It can be retracted by pressing the button, once released it returns the pressure spring into its locking position.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule our any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of lock pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)



Application example

Stainless Steel-Locking pins

Plastic knob, with axial lock (Pawl)

SPECIFICATION

Knob / Push button / Slide

- Plastic
- temperature resistant up to 80 °C
- Knob: black-grey
- Push button: red

Pin
Stainless Steel AISI 303

Pawl
Stainless Steel AISI 304 (sheet metal)

Spring
Stainless Steel AISI 301

INFORMATION

Stainless Steel-Pins with axial lock GN 114.3 are used for quick fixing, connecting and locking of various jig and fixture systems. A typical application is location pins which have to be often removed and replaced again.
The rectangular pawls made of Stainless Steel sheet metal keep the locking pin in an axial position in the bore. It can be retracted by pressing the button, once released it returns the pressure spring into its locking position.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule out any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of lock pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Stainless Steel-Locking pins

Stainless Steel knob, with axial lock (Pawl)

SPECIFICATION

Knob / Push button / Slide
Stainless Steel AISI 303

Pin
Stainless Steel AISI 303

Pawl
Stainless Steel AISI 304 (sheet metal)

Spring
Stainless Steel AISI 301

INFORMATION

Stainless Steel-Locking pins with axial lock GN 114.6 are used for quick fixing, connecting and locking of various jig and fixture systems. A typical application is location pins which have to be often removed and replaced again.
The rectangular pawls made of Stainless Steel sheet metal keep the locking pin in an axial position in the bore. It can be retracted by pressing the button, once released it returns the pressure spring into its locking position.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule out any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of lock pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Locking pins

with axial lock (Pawl)

SPECIFICATION

Pin
Steel
zinc plated, blue passivated

Pawl
Stainless Steel sheet metal AISI 304

Lifting ring
Stainless Steel AISI 301

Push button / Slide
Plastic

- temperature resistant up to 80 °C
- Push button red

Spring
Stainless Steel AISI 301

INFORMATION

Locking pins with axial lock GN 214.2 are used for quick fixing, connecting and locking of various jig and fixture systems. A typical application is location pins which have to be often removed and replaced again.
The rectangular pawls made of Stainless Steel sheet metal keep the locking pin in an axial position in the bore. It can be retracted by pressing the button, once released it returns the pressure spring into its locking position.
The version with swivelling lifting ring is ideal for the use in confined spaces.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule our any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of locking pins (see page 868)

Stainless Steel-Locking pins

Stainless Steel-Slide, with axial lock (Pawl)

SPECIFICATION

Pin
Stainless Steel AISI 303

Slide / Push button
Stainless Steel AISI 303

Pawl
Stainless Steel sheet metal AISI 304

Lifting ring
Stainless Steel AISI 301

Spring
Stainless Steel AISI 301

INFORMATION

Stainless Steel-Locking pins with axial lock GN 214.6 are used for quick fixing, connecting and locking of various jig and fixture systems. A typical application is location pins which have to be often removed and re-placed again.
The rectangular pawls made of Stainless Steel sheet metal keep the locking pin in an axial position in the bore. It can be retracted by pressing the button, once released it returns the pressure spring into its locking position.
The version with swivelling lifting ring is ideal for the use in confined spaces.
The load values given in the above table at shear stress are theoretically obtained and indicative only. They are non-binding recommended values and rule our any liability. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
- Range of locking pins (see page 868)

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

Stainless Steel-Ball lock pins

with clamping length compensation

SPECIFICATION

Pin
Stainless Steel AISI 303

Handle
Plastic (Polyamide PA)

- black-grey / red
- temperature resistant up to 80 °C

Balls
Stainless Steel AISI 420C

Spring
Stainless Steel AISI 631

INFORMATION

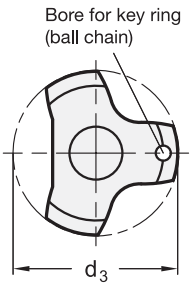
Stainless Steel-Ball lock pins GN 113.1 are used for rapid clamping and, at the same time, play-free clamping of thin components in particular where frequent clamping and releasing is required. A typical application is the alignment and clamping of sheet metal during a welding process.
By depressing the spring-loaded push button the pin advances by the length l_2 and at the same time frees the two balls.
- Range of locking pins (see page 868)

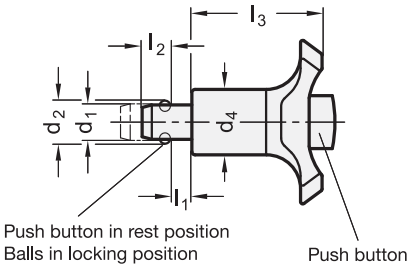
ACCESSORY

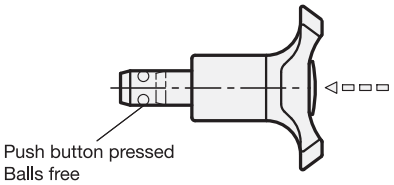
- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)







Application example

Stainless Steel-Locking pins

with axial lock (Ball retainer)

SPECIFICATION

Pin
Stainless Steel AISI 303

Knob
Plastic Technopolymer (Polyamide PA)

- black-grey
- temperature resistant up to 80 °C

Ball
Stainless Steel AISI 420C

Spring
Stainless Steel AISI 631

INFORMATION

GN 124.2 Stainless Steel-Locking pins are used for quick fixing, connecting and locking of various jig and fixture systems.
The locking balls are held in position by a pressure spring and are therefore not rigidly locked. The bolts can be quickly and easily inserted and removed from the locating hole.
The rated shear stresses of the bolt cross-section are theoretical guide values only and do not constitute any warranty. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.
This standard replaces the previous Stainless Steel-Locking pins GN 124.
- Range of locking pins (see page 868)

ACCESSORY

- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Plastic characteristics (see page A2)

Stainless Steel-Locking pins

with axial lock (magnetic)

SPECIFICATION

Pin
Stainless Steel AISI 303

Knob
Plastic Technopolymer (Polyamide PA)

- black-grey
- temperature resistant up to 80 °C

Retaining magnet
Neodymium, iron, boron

INFORMATION

GN 124.1 Stainless Steel-Locking pins are used for quickly fixing, connecting and locking various parts and workpieces made of magnetic materials.
A neodymium magnet is recessed into the underside of the bolt and axially retains the bolt in its inserted procession. High-quality surfaces with perpendicular locating holes promote magnetic flux to produce excellent axial retention.
The rated shear stresses of the bolt cross-section are theoretical guide values only and do not constitute any warranty. They constitute no general warranty of quality and condition. The user must determine from case to case whether a product is suitable for the intended use.

Stainless Steel-Assembly pins

SPECIFICATION

Types

- Type **B**: with plain washer
- Type **E**: with washer with eyelet, suitable for key rings
- Type **L**: with washer, with mounting shackle (only identification no.1)

Identification no.

- No. **1**: without cross hole
- No. **2**: with cross hole for spring cotter pin GN 1024 (see page 909)

Assembly pin
Stainless Steel AISI 304 **NI**

Washer
Stainless Steel

- Type B: turned AISI 304
- Type E: metal injection molded AISI 316 LHC
- Type L: sintered AISI 316 LHC

Countersunk screw DIN 7991
Stainless Steel AISI 304
not removable

INFORMATION

GN 2342 Stainless Steel-Assembly pins are characterized by their use in diverse applications.
Depending on the requirement there are three washer types to choose from, which place the assembly pin in an axial position in its insertion direction. With the washer with eyelet (Type E) the assembly pin and a corresponding GN 1024 (see page 909) spring cotter pin can be secured to prevent loss using a retaining cable or ball chain. The washer with mounting shackle (Type L) simultaneously acts as loss protection and anti-rotation protection. Assembly pins according to identification no. 2 are secured against falling out via a transverse drill hole which is aligned to the GN 1024 (see page 909).

ACCESSORY

- Spring cotter pins GN 1024 (see page 909)
- Ball chains GN 111 (see page 904)
- Retaining cables GN 111.2 (see page 906)
- Key rings GN 111.3 (see page 903)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

** This type (L) is only available in Identification no. 1

Stainless Steel-Retaining washers

SPECIFICATION

Types

- Type **E**: with eyelet
- Type **L**: with mounting shackle

Stainless Steel **NI**

- Type E: metal injection, molded, AISI 316 LHC, ground
- Type L: sintered AISI 316 LHC, ground

INFORMATION

GN 2344 Stainless Steel-Retaining washers are universally usable standard parts.
Type E is suitable for use in connection with retaining cables and ball chains to mount other standard or securing parts in order to prevent loss.
Type L is suitable, for example, for mounting bolts or axes, which can thereby simultaneously be secured in an axial and also in a radial position.

ACCESSORY

- Ball chains GN 111 (see page 904)
- Stainless Steel-Ball chains GN 111.5 (see page 905)
- Retaining cables GN 111.2 (see page 906)
- Spiral retaining cables GN 111.4 (see page 908)
- Key rings GN 111.3 (see page 903)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

GN 111.3

Key rings

SPECIFICATION

Stainless Steel

Suitable for ball lock pins and locking pins (see pages 870):

* GN 113.1, GN 113.3, GN 113.4, GN 113.7, GN 113.8, GN 214.2, GN 214.3, GN 214.6 for pins Ø 5, Ø 6, Ø 8

and

* GN 113.5, GN 113.6, GN 114.2, GN 114.3, GN 114.6, GN 124.1, GN 124.2 for all pins

** GN 113.1, GN 113.3, GN 113.4, GN 113.7, GN 113.8, GN 214.2, GN 214.3, GN 214.6 for pins Ø 10, Ø 12, Ø 16, Ø 20

INFORMATION

For ball chains GN 111, Stainless Steel-Ball chaines GN 111.5 (see page 905) retaining cables GN 111.2 (see page 906) and spiral retaining cables GN 111.4 (see page 908) there are single key rings available.
Some sizes can be used as loss protection for ball lock pins and locking pins e.g. in combination with a retaining cable.
Furthermore, key rings have uses in many other areas.

GN 111.6

Stainless Steel-Retaining rings

SPECIFICATION

Stainless Steel AISI 301

INFORMATION

Retaining rings GN 111.6 are normally used together with ball chains or retaining cables.
One typical application involves making e.g. knurled screws captive, for instance.

Ball chains

with two key rings

SPECIFICATION

Ball chain
Brass, nickel plated

Key ring
Stainless Steel AISI 301

Suitable for ball lock pins and pins with axial lock (see pages 870):

* GN 113.1, GN 113.3, GN 113.4, GN 113.7, GN 113.8, GN 214.2, GN 214.3, GN 214.6 for pins Ø 5, Ø 6, Ø 8

and

* GN 113.5, GN 113.6, GN 114.2, GN 114.3, GN 114.6, GN 124.1, GN 124.2 for all pins

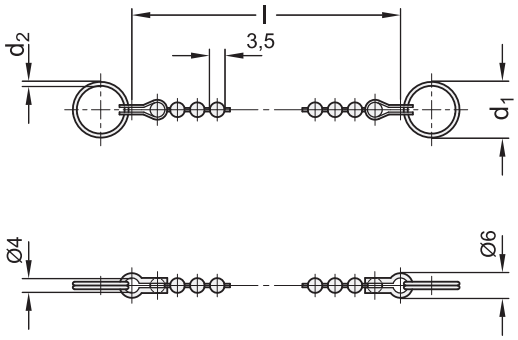
** GN 113.1, GN 113.3, GN 113.4, GN 113.7, GN 113.8, GN 214.2, GN 214.3, GN 214.6 for pins Ø 10, Ø 12, Ø 16, Ø 20

INFORMATION

Ball chains GN 111 are mainly used in connection with ball lock pins and pins with axial lock.
The key rings are supplied unmounted. Both rings have the same Ø d_1.
The load values given in the above table at shear stress are theoretically obtained and indicative only.
They are non-binding recommended values and rule out any liability.

ACCESSORY

- Single key rings are supplied with code no. GN 111.3-d_1 (see page 903)



Application example

INFORMATION

Spiral retaining cables GN 111.4 are used in connection with low weight elements e. g. ball lock pins and pins with axial lock.
They are distinguished for a large "useable length".
The key rings are supplied unmounted. Both rings have the same Ø d_1.

ACCESSORY

- Single key rings are supplied with code no. GN 111.3-d_1 (see page 903)

GN 1024

Spring cotter pins

Steel / Stainless Steel

SPECIFICATION

Types

- Type **E**: with single winding
- Type **D**: with double winding

Version in Steel ST
zinc plated, blue passivated

Version in Stainless Steel NI
AISI 303

INFORMATION

Spring cotter pins GN 1024 are used for the axial fixing of bolts and axes and as distortion guard, e.g. for crown nuts DIN 935.
Owing to their double winding, spring cotter pins of Type D have a flatter spring characteristic and are therefore easier to install. Also, a retaining rope incldng a key ring can be attached to the double winding to safeguard the spring cotter pins against loss.

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)

Thrust pads

Rings

Washers

Nuts

Positioning elements

Vibration-damping elements

Cam locking levers

Transfer units

Lifting accessories

Grub screws

with thrust point

SPECIFICATION

Types

- Type **SK**: with internal hexagon, pad hardened
- Type **SKN**: with internal hexagon, not hardened

Steel
Tensile strength class 5.8

Type SK

- Thrust point hardened
- blackened

Type SKN

- Thurst point unhardened
- blackened
- zinc plated, blue passivated **ZB**

INFORMATION

The thrust point of these screws DIN 6332 is designed to be used with or without the thrust pad for clamping.
The snap ring resp. spring is a simple and quick method to connect the thrust pad to the grub screw.
Through the combination of grub screws DIN 6332 with various handles or knobs, simple clamping screws can be created.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Strength values of screws (see page A20)

GN 632.1

RoHS

Grub screws

with ball point for Thrust pads GN 631 / GN 631.5

SPECIFICATION

Steel

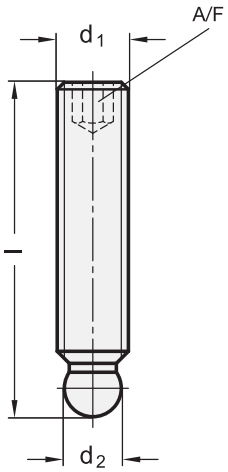
- Tensile strength class 5.8
- blackened

INFORMATION

Grub screws GN 632.1 with ball point are as a rule used with thrust pads GN 631 (see page 940) / GN 631.5 (see page 941).
The ball-Ø d_2 is smaller than the thread core-Ø, which allows fitting over the ball end.
The combination of grub screws GN 632.1 and thrust pads GN 631 / GN 631.5 with gripping elements easily makes clamping screws of many different types.

TECHNICAL INFORMATION

- Strength values of screws (see page A20)



Mounting example

Shoulder screws

Steel / Stainless Steel, with collar

SPECIFICATION

Version in Steel

- Tensile strength class 12.9
- blackened
- Adapter dimensions d_1 ground

Version in Stainless Steel NI

- AISI 304 (A2)
- Adapter dimension d_1 ground

INFORMATION

Shoulder screws ISO 7379 are cost-saving construction elements for a wide variety of different uses.
The maximum tightening torque must not be defined by strength class 12.9, it is instead limited by the relatively small bearing points (shoulders) and by the recesses at the transition point from d_1 to d_2 and d_3.
Standard deviation:
- no information about the concentricity 2 IT 13 and IT 10 2
- the official ISO standard sheet has the following dimensions for d_1 - d_2: 6.5-M5 / 13-M10 / 25-M20
- the dimensions 4-M3 and M4-M5 are not included in the official ISO standard sheet

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- ISO-Fundamental Tolerances (see page A21)
- Strength values of screws (see page A20)

GN 732.1

Cylinder head shoulder bolts

SPECIFICATION

Steel **ST**

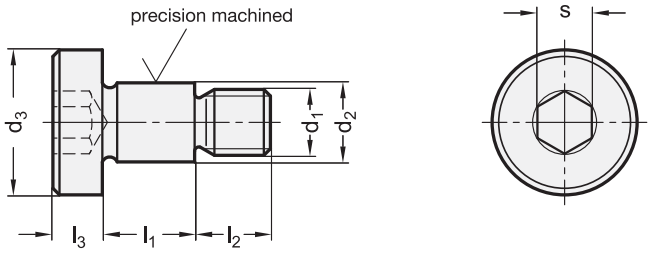
- Tensile strength class 5.8
- blackened
- case hardened (all round depth 0.2 to 0.4 mm)

INFORMATION

The dimensions d_2 / l_1 of the cylinder head shoulder bolts GN 732.1 permit a use as bearing pin for swing bolts DIN 444 (see page 935), swing nuts GN 444.2 (see page 936) and hub with eccentrical cam GN 919 (see page 1055).

TECHNICAL INFORMATION

- Strength values of screws (see page A20)



Application example

GN 913.2

Grub screws

with hardened pivot

SPECIFICATION

Types

- Type **A**: Semi-spherical pivot
- Type **B**: Pointed pivot

Steel

- Tensile strength class 5.8
- blackened

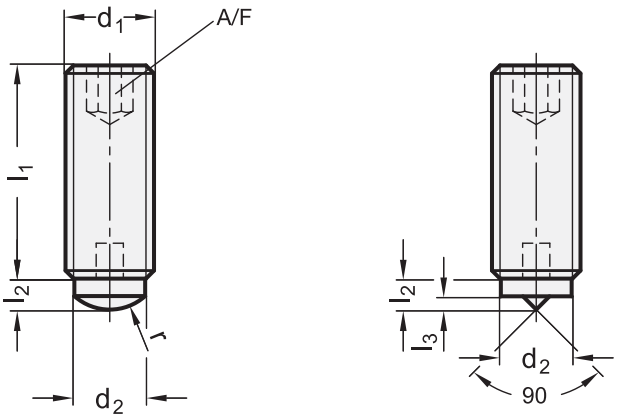
Thrust pivot
hardened

INFORMATION

Grub screws GN 913.2 with hardened spherical pivot (Type A) are used in such cases where point contact is required. They are a lower cost alternative to ball point screws GN 605 (see page 928).
Grub screws GN 913.2 with hardened pointed pivot (Type B) offer an alternative form of finish.

TECHNICAL INFORMATION

- Strength values of screws (see page A20)



*Complete with type index of the Grub screws

GN 806

Protective caps

SPECIFICATION

Types

- Type **A**: Protective cap without screw / threaded bushing
- Type **B**: Protective cap with threaded bushing

Protective cap
Rubber (CR)

- Hardness 85±5 Shore A
- black

Threaded bushing
Steel
zinc plated, blue passivated

INFORMATION

Protective caps GN 806 can be used with hexagon screws ISO 4017 or together with threaded pins type B as thrust pins with soft clamping head surface, or as soft end stop bolts.
A typical application is in conjunction with toggle clamps.

TECHNICAL INFORMATION

- Elastomer characteristics (see page A32)

Setting bolts

SPECIFICATION

Types

- Type **AK**: Locating surface with rounded end, hardened
- Type **BK**: Locating surface with Polyurethan disc

Screw
Steel, tensile strength class 5.8

Type AK
blackened
Locating surface, hardened (HRC 45)

Type BK
nickel plated
Polyurethan disc, 90 Shore

Hexagon nut
Steel zinc plated, blue passivated

INFORMATION

Setting bolts GN 251 are produced with a hardened and rounded head which can be used as support or setting bolt as an end stop. The version with Polyurethan disc (Type BK) functions as damping element or protection for sensitive surfaces.

Setting bolts

with limit switch

SPECIFICATION

Types

- Type **S**: Normally open
- Type **O**: Normally closed

Bolt Steel

- Tensile strength class 5.8
- Hexagon head hardened to HRC 45
- nickel plated

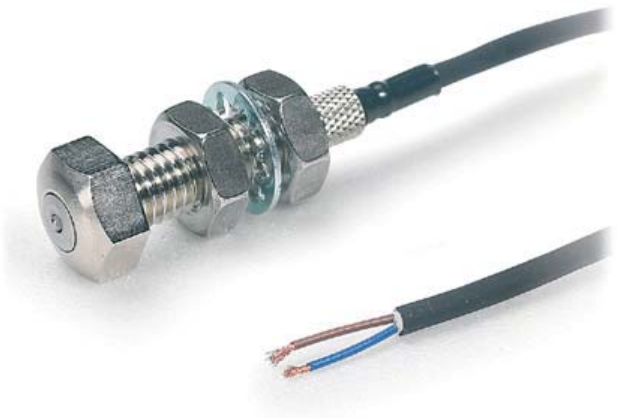
Hexagon nuts Steel
nickel plated

End limit switch

- Voltage: 5 ... 24 V DC
- Switching load recom.: 5-10 mA
- Switching load: 20 mA DC max.
- Life expectancy: 3 mio. operations
- Temperature range: -10 °C ... +80 °C
- Load: ~1 N

Supply cable PVC:

- Ø 3 ; 2-phase, ~ 2 meters long
- max. tensile load 30 N
- grey for Type S (normally open)
- black for Type O (normally closed)



INFORMATION

Setting bolts GN 251.2 are supplied with a hardened round head which serves as a firm end stop.
In general these bolts are installed with a locknut.
When the workpiece contacts the bolt head an electrical signal is transmitted by means of the limit switch.
By means of the knurled nut, the limit switch can be installed resp. taken out without having the need to loosen the setting bolt.
Operating instructions showing more important technical information are included with every setting bolt.

TECHNICAL INFORMATION

- Strength values of screws (see page A20)
- IP Protection classes (see page A32)

GN 933.5

Stainless Steel-
Hexagon head screws
with brass / plastic / spherical pivot

SPECIFICATION

Types

- Type **MS**: Brass pivot
- Type **KU**: Plastic pivot (Polyacetal POM)
- Type **ZK**: Spherical pivot

Hexagon head screw
Stainless Steel AISI 304 (A2)

INFORMATION

Stainless Steel-Hexagon head screws GN 933.5 with brass or plastic pivots are used when pressure dents or damage to the clamping surface must be avoided.
Stainless Steel-Hexagon head screws GN 933.5, type ZK, feature a spherical pivot whose diameter d_4 is smaller than the core diameter d_1 of the thread. This makes them suitable for holding thrust pads GN 631 (see page 940) / GN 631.5 (see page 941) which must be ordered separately.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
- Stainless Steel characteristics (see page A26)

- Type **A**: full ball
- Type **B**: flat ball
- Type **V**: flat ball, with swivel limiting stop
- Type **VR**: flat ball, with swivel limiting stop, corrugated

Steel

- Tensile strength class 10.9
- blackened

Ball

- hardened
- blank

Version in Stainless Steel

Types

- Type **AN**: full ball
- Type **BN**: flat ball
- Type **VN**: flat ball, with swivel limiting stop
- Type **VRN**: flat ball, with swivel limiting stop, corrugated

Screw
Stainless Steel AISI 304

Ball
Steel AISI 440C
hardened

INFORMATION

Ball point screws GN 605 with full ball (Type A / Type AN) are used in applications where a ball point contact is required.
The flat faced moving ball (Type B/ Type BN) allows a clamping or supporting of non parallel surfaces.
The ball of Type V/VN/VR/VRN can be swivelled to a maximum of 9° to ensure that clamping is always maintained on the flat section of the ball.

ON REQUEST

- Ball point screws with (full) plastic ball (Type AK)

TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Strength values of screws (see page A20)

GN 606

Ball point screws

Steel / Stainless Steel

SPECIFICATION

Version in Steel

Types

- Type **A**: full ball
- Type **B**: flat ball
- Type **V**: flat ball, with swivel limiting stop
- Type **VR**: flat ball, with swivel limiting stop, corrugated

Steel

- Tensile strength class 12.9
- blackened

Ball

- hardened
- blank

Version in Stainless Steel

Types

- Type **AN**: full ball
- Type **BN**: flat ball
- Type **VN**: flat ball, with swivel limiting stop
- Type **VRN**: flat ball, with swivel limiting stop, corrugated

Screw
Stainless Steel AISI 304

Ball
Stainless Steel AISI 440C
hardened

INFORMATION

Ball point screws GN 606 with full ball (Type A / Type AN) are used in applications where a ball point contact is required.
The flat faced moving ball (Type B / Type BN) allows a clamping or supporting of non parallel surfaces.
The ball of Type V/VN/VR/VRN can be swivelled to a maximum of 9° to ensure that clamping is always maintained on the flat section of the ball.

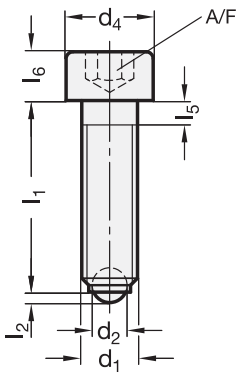
ON REQUEST

- Ball point screws with (full) plastic ball (Type AK)

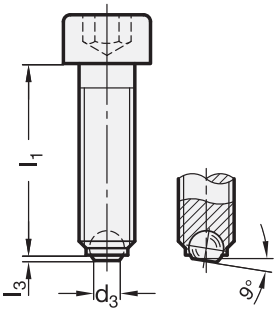
TECHNICAL INFORMATION

- Stainless Steel characteristics (see page A26)
- Strength values of screws (see page A20)

Type **A / AN**



Type **B / BN**



Type **V / VN**
Type **VR / VRN**

GN 1524

INOX STAINLESS STEEL RoHS

Swing bolts

Steel / Stainless Steel, with long threaded bolt

SPECIFICATION

Version in Steel

- Tensile strength class 5.8
- turned
- blackened

Version in Stainless Steel NI

- AISI 303
- turned
- matt shot-blasted

INFORMATION

Swing bolts GN 1524 offer a longer threaded bolt contrary to DIN 444 (see page 935).
For stocking purpose cylinder head shoulder bolts GN 732 (see page 919) can be used for the sizes M8, M10 and M12.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerance (see page A21)
- Stainless Steel characteristics (see page A26)
- Strength values of screws (see page A20)

DIN 444

Swing bolts

Steel / Stainless Steel

SPECIFICATION

Version in Steel

- Tensile strength class 5.8
- turned, thread rolled
- blackened

Version in Stainless Steel AISI 303 NI

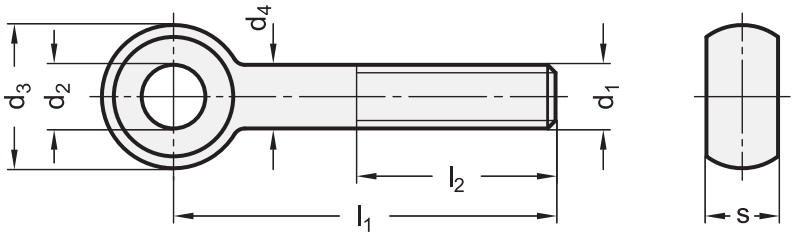
- turned, thread rolled
- matt shot-blasted

INFORMATION

Precision type swing bolts DIN 444 are mainly used for jigs and fixtures.
For stocking purposes cylinder head shoulder bolts GN 732.1 (see page 919) can be used for the sizes M 6, M 8, M 10 and M 12.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Stainless Steel characteristics (see page A26)
- Strength values of screws (see page A20)



Cylinder head shoulder bolt GN 732.1 used as bearing pin

GN 444.2

Swing nuts

SPECIFICATION

Steel

- Tensile strength class 5.8
- blackened

INFORMATION

In combination with grub screws i.e. DIN 913 or DIN 6379 (see page 937) and swing nuts GN 444.2 can be used together as swing bolts in varying lengths.
In addition, used with a cap screw DIN 912, a swivelling clamping screw can be produced.
Dimensions d_2 ,d_3 and s are identical to DIN 444 (see page 935).
For stocking purposes cylinder head shoulder bolts GN 732.1 (see page 919) can be used for the sizes M8, M10 and M12.

TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)
- Strength values of nuts (see page A20)

Thrust pads

for Grub screws DIN 6332, for Tommy screws DIN 6304 / DIN 6306

SPECIFICATION

Type

Type **S**: with snap ring

Steel
case hardened

Snap ring
Spring steel wire

INFORMATION

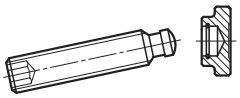
Thrust pads DIN 6311 are utilized to transmit clamping forces. They lean to uneven and unparallel surfaces and eliminate the transmission of any screw turning movement to the workpiece.

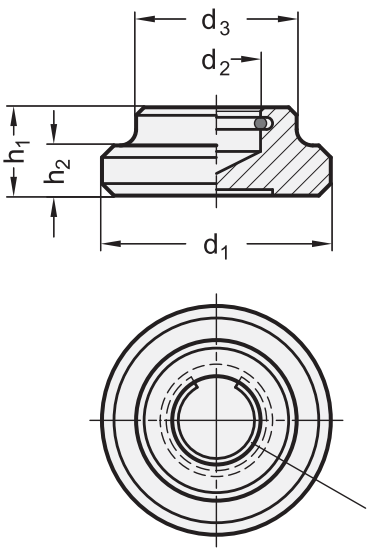
TECHNICAL INFORMATION

- ISO-Fundamental Tolerances (see page A21)

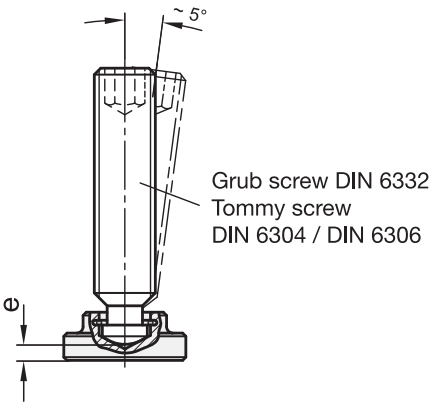
HINTS FOR INSTALLATION

The thrust pad has to be held at an angle allowing the circlip to drop to the bottom of its groove with the split end downwards. The thrust pin is then offered up top the split end of the circlip at the lowest possbile angle and pressed home.





Mounting example



DIN 6311

Description	d1	d2 H12	d3	e ≈	h1	h2	Grub screw DIN 6332	⚖

GN 6311.1

Thrust pads

for grub screws DIN 6332, tommy screws DIN 6304 / DIN 6306

SPECIFICATION

Types

- Type **A**: Thrust pad surface plain, without plastic cap
- Type **P** : Thrust pad surface with prism, without plastic cap
- Type **K**: Thrust pad surface plain, with plastic cap

Steel
blackened

Snap ring
Spring steel wire

Plastic cap (Polyacetal POM)

- natural colour
- temperature resistant up to 100 °C

INFORMATION

Thrust pads GN 6311.1 are used in conjunction with grub screws fitted with thrust point (grub screws DIN 6332 (see page 912), tommy screws DIN 6304 (see page 407) and DIN 6306 (see page 409) to transmit clamping force. They align themselves on uneven and non-parallel surfaces and thus prevent the rotating force being transmitted to the workpiece.
The plastic cap prevents damage to delicate workpieces.
The unique shape of the non-removable retaining ring permits easy insertion and removal of grub screws into or from the thrust pad.
Thrust pads GN 6311.1 can be used in conjunction with DIN 6332 (see page 912) grub screws as levelling pad.

TECHNICAL INFORMATION

- Plastic characteristics (see page A2)
